# MTi-8

- Miniature form factor (12x12 mm)
- Cm-level accuracy
- Development Kit available

The MTi-8 is a cm-level GNSS/INS as a 12.1 x 12.1 mm module with an interface to an external GNSS receiver. The Xsens optimized strapdown algorithm (AttitudeEngine $^{TM}$ ) performs high-speed dead-reckoning calculations at 1 kHz allowing accurate capture of high frequency motions. Xsens' industry-leading sensor fusion algorithm provides high accuracy and sensor auto-calibration in a cost-effective module for a wide range of (embedded) outdoor applications. It relieves users from the design, integration and maintenance of gyroscopes, accelerometers and other sensors.

The MTi-8 is supported by the MT Software Suite which includes MT Manager (GUI for Windows/Linux), SDK, example codes and drivers for many platforms including ROS.
