## FEATURES & APPLICATIONS

JLX Series XLR chassis connectors offer a sleek and robust connection in a standard "J" Size shell. This series is perfect for permanent installations or design-in applications where the termination method is solder cups. The connectors feature "metal on metal" housing which provides improved RF and EMI protection, making these connectors perfect for use in high noise environments or where cell phone or radio frequencies are most offensive. They have precision machined, one piece, silver plated contacts and a separate tin plated ground pin which grounds to the connector housing and panel. Available in 3 or 5 pin variations. The JLX Series XLR chassis connectors help prevent local RF interference from assisted listening, WiFi, and other radio transmitters close to the connectors. When coupled with quality shielded cables, a robust system for preventing the intrusion of unwanted noises is created.
