SNAP ISOLATED ANALOG INPUT MODULES

Features

- > Channel-to-channel isolation
- Rugged packaging and convenient pluggable wiring. Accepts 22 to 14 AWG wire.
- > Factory calibrated; no user adjustment necessary
- > Operating temperature -20 °C to 70 °C

SNAP I/O isolated analog input modules provide two or more channels isolated from each other, thereby eliminating problems caused by ground loop currents. These isolated analog modules are part of Opto 22's SNAP PAC System and mount on SNAP PAC racks with an I/O processor (brain or on-the-rack controller). SNAP isolated analog input modules are compatible with all SNAP PAC brains and rack-mounted controllers.

Since many SNAP analog input modules are software-configurable and handle a wide variety of signal levels, a small number of modules can support a wide range of input requirements. Modules provide high resolution for precise signal levels, and all SNAP analog modules are factory calibrated. Dimensional drawings start on page 14.

SNAP analog input modules have an on-board microprocessor to provide module-level intelligence, making them an ideal choice for original equipment manufacturers (OEMs). For more information about standalone SNAP analog modules, see the SNAP I/O Module Integration Guide (form 876).

SNAP racks have a retention rail locking system. Use two 4-40 by ½-inch standard machine screws to hold each module securely in position on the SNAP rack (recommended torque: 4 inch pounds [0.45 Newton meters]).

Notes for legacy hardware: Most isolated analog input modules can be used with SNAP Simple, SNAP Ethernet, SNAP Ultimate, and SNAP *mistic* brains such as the serial B3000, and with M-series or B-series mounting racks. For exceptions, see individual module descriptions.

Isolation

All SNAP analog input modules are isolated from all other modules and from the I/O processor. In addition, the modules in this data sheet have all channels isolated from each other. Channel-to-channel isolation gives you freedom from ground-loop problems even on grounded devices connected to channels on the same module.

SNAP Isolated Analog Input Modules

Transformer isolation prevents ground loop currents from flowing between field devices and causing noise that produces erroneous readings. Ground loop currents are caused when two grounded field devices share a connection, and the ground potential at each device is different.

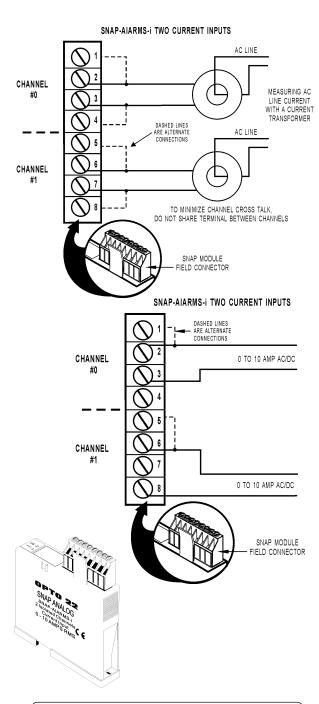

Isolation also provides protection for sensitive control electronics from industrial field signals.

Part	Description
SNAP-AIARMS-i	Isolated two-channel 0–0 amp RMS AC/DC input
SNAP-AIVRMS-i	Isolated two-channel 0–250 V RMS AC/DC input
SNAP-AIMA-i	Isolated two-channel analog current input -20 mA to +20 mA
SNAP-AIMA-iSRC	Isolated two-channel analog current input -20 mA to +20 mA, with loop sourcing
SNAP-AIMA2-i	Isolated two-channel analog current input -1 mA to +1 mA
SNAP-AIRATE-HFi	Isolated two-channel analog frequency input, 2 Hz to 500 kHz or 20 Hz to 500kHz
SNAP-AITM-i	Isolated two-channel analog type E, J, or K thermocouple or ±150 mV or ±75 mV input
SNAP-AITM2-i	Isolated two-channel analog type B, C, D, G, N, T, R, or S thermocouple or ±50 mV or ±25 mV input
SNAP-AITM-4i	Isolated four-channel analog type B, C, D, E, G, J, K, N, R, S, or T thermocouple or ±150 mV, ±75 mV, ±50 mV, or ±25 mV input
SNAP-AIV-i	Isolated two-channel analog voltage input ±10 VDC or ±5 VDC
SNAP-AIV2-i	Isolated two-channel analog voltage input ±100 VDC or ±50 VDC

ISOLATED 0 TO 10 AMP RMS AC/DC INPUT MODULE

IMPORTANT: The mounting rack connector has 24 pins; the module connector has 20 pins. The extra pins on the mounting rack connector prevent misalignment of the module during installation.

Part Number	Description
SNAP-AIARMS-i	Isolated two-channel 0 to 10 amp RMS AC/DC input

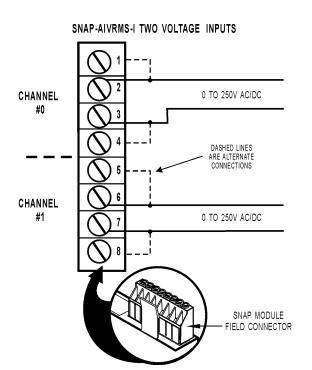

Description

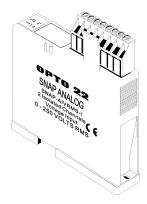

The SNAP-AIARMS-i module provides an input range of 0 to 10 amps RMS AC/DC. An ideal input is the 5-amp secondary of a standard current transformer used to monitor AC line current. The two channels are isolated from each other; they do not share any field connection. This module is ideal for differential current measurements. It may also be used to monitor AC current to greater than a 100-amp range, using a current transformer of suitable ratio.

Input Range	0 to 10 amp RMS AC/DC
Input Over Range	To 11 amps
Input Resistance	0.005 ohms
Maximum Input	11 amps AC/DC
Accuracy (AC)	±8 mA and ±0.2% reading

ISOLATED 0 TO 250 VOLT RMS AC/DC INPUT MODULE

IMPORTANT: The mounting rack connector has 24 pins; the module connector has 20 pins. The extra pins on the mounting rack connector prevent misalignment of the module during installation.

Part Number	Description
SNAP-AIVRMS-i	Isolated two-channel 0 to 250 V RMS AC/DC input

Description

The SNAP-AIVRMS-i module provides an input range of 0 to 250 volts AC or DC. This module may be used to monitor 120/240-volt AC/DC and 12/24/48-volt AC/DC system voltage.

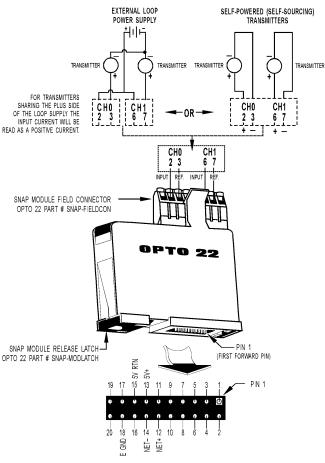

The two channels are isolated from each other; they do not share any field connection. Because the module has no polarity specification for either the AC or DC field signals, all data from the module is represented as positive values.

These modules are ideal for differential voltage measurements.

Input Range	0 to 250 V RMS AC/DC
Input Over Range	To 275 V
Input Resistance	1 megohms
Accuracy	±0.2 V and ±0.2% reading
Resolution	10 mV

Part Number	Description
SNAP-AIMA-iSRC	Isolated two-channel analog current input -20 mA to +20 mA, with loop sourcing

Description

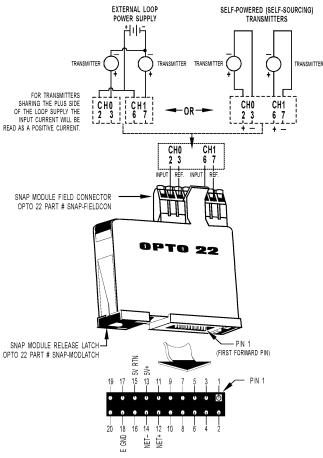

The SNAP-AIMA-iSRC is similar to the SNAP-AIMA-i module but include built-in loop sourcing capability. With the connection of a single 24 V power supply, these modules source 24 V for two 4–20 mA loops. The two channels and their loop sources are isolated from each other; they do not share any field connection. The isolation allows you to independently wire one channel to a loop with an external power supply and the other channel to a loop powered through the module. In addition, each loop sourced through the module is current limited so that an external fault on one loop will not affect the other.

IMPORTANT: The mounting rack connector has 24 pins; the module connector has 20 pins. The extra pins on the mounting rack connector prevent misalignment of the module during installation.

ISOLATED FREQUENCY INPUT MODULE

Part Number	Description
SNAP-AIRATE-HFi	Isolated two-channel analog frequency input, 2 Hz–500 kHz or 20 Hz–500 kHz

Description

The SNAP-AIRATE-HFi module provides frequency to digital conversion. Each channel can be configured for a 0.1-second measurement interval, providing an input range of 20 Hz to 500 kHz, or a 1-second measurement interval, providing an input range of 2 Hz to 500 kHz. Data freshness is dependent upon and directly related to the measurement interval.

Nine volts through a 3.6 kOhm pull-up resistor is provided internally for each channel for use with devices that have open-collector outputs. This feature eliminates the need for you to provide the pull-up voltage supply and associated wiring, barrier strips, and so on. The module works with TTL, CMOS, and open-collector outputs.

The two channels on the module are isolated from each other. Since these channels do not share any common connections, grounded sensors and field devices may be used with them.

This module requires a SNAP PAC controller or brain with SNAP PAC firmware version 9.3e or higher. It cannot be used with legacy controllers or brains.

See wiring diagrams on the following page.

Part Number	Description
SNAP-AITM2-i	Isolated two-channel analog type B, C, D, G, N, T, R, or S thermocouple or -50 mV to +50 mVDC input or -25 mV to +25 mVDC input

Description

The SNAP-AITM2-i module provides an input range of ± 50 mV, ±25 mV, or Type B, C, D, G, N, T, R, or S thermocouple.

The two channels on the module are isolated from each other. Since these channels do not share any common connections, grounded sensors and field devices may be used with them.

Т	Red	Blue	-270 °C to +400 °C

IMPORTANT: The mounting rack connector has 24 pins; the module connector has 20 pins. The extra pins on the mounting rack connector prevent misalignment of the module during installation.

Part Number	Description	
SNAP-AITM-4i	Isolated four-channel analog type B, C, D, E, G, J, K, N, R, S, or T thermocouple or ±150 mV, ±75 mV, ±50 mV, or ±25 mV input	

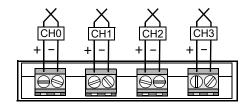

Description

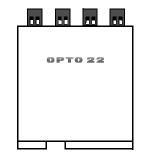

The SNAP-AITM-4i module provides an input range of ± 150 mV, ± 75 mV, ± 50 mV, ± 25 mV, or Type B, C, D, E, G, J, K, N, R, S, or T thermocouple.

The four channels on the module are isolated from each other. Since these channels do not share any common connections, grounded sensors and field devices may be used with them.

SNAP-AITM-4i requires a SNAP PAC rack, a SNAP PAC brain or R-series controller with firmware 9.1 or newer, and PAC Project 9.1 or newer.

IMPORTANT: The mounting rack connector has 24 pins; the module connector has 20 pins. The extra pins on the mounting rack connector prevent misalignment of the module during installation.

Description

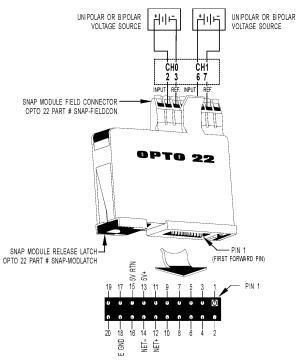

The SNAP-AIV-i module can be configured for either -10 VDC to +10 VDC or -5 VDC to +5 VDC operation on each channel. The SNAP-AIV-i provides two channels that are isolated from each other. Since these channels do not share any common connections, grounded sensors and field devices may be used with them.
