# **AT-6000**

# **Advanced Wire Tracer Series**

### Locate and trace Energized and De-energized wires, automatically identify breakers

The AT-6000 Series, available in two different kits, combines a receiver and powerful transmitter to locate Energized and De-energized wires, breakers, fuses and easily find breaks and shorts. Whether you're a novice or an expert, Amprobe advanced wire tracers will help you get the job done fast.

The AT-6000-R Receiver detects the signal in wires and cables using two methods: active tracing method (with the Transmitter) and passive tracing method (without the Transmitter). In hard-to-reach areas, the Receiver's Tip Sensor can be used to trace wires in corners, tight spaces and junction boxes.

The AT-6000-T Transmitter works on Energized and De-energized circuits up to 600 V AC/DC in Category I through Category III electrical environments and features high signal, low signal,

and loop modes. The Breaker Identification feature eliminates confusion of multiple false positives, common with older technology tracing tools, by identifiying the one correct breaker or fuse with the highest recorded signal.

**The CT-400 Signal Clamp** (optional for AT-6020, included with AT-6030) is used for applications where is no access to the bare conductors by enabling the AT-6000-T Transmitter to induce a signal into a wire through the insulation.

Safety Certification

All Amprobe tools, including the Amprobe AT-6000 Series, are rigorously tested for safety, accuracy, reliability, and ruggedness in our state-of-the-art test lab. In addition, Amprobe products that measure electricity are listed by a 3rd party safety lab, either UL or CSA. This system assures that Amprobe products meet or exceed safety regulations and will perform in a tough, professional environment for many years to come.

## **AMPROBE®**

Most accurate wire tracing in its class with eight sensitivity modes

Reduce downtime with immediate and unambiguous breaker identification

Intuitive transmitter automatically senses whether the system is energized or de-energized

- Main Applications
   Trace Energized and De-energized wires behind walls, ceilings or floors
- Identify breakers and fuses quickly and accurately
- Non-contact voltage mode and passive tracing without the use of the transmitter

# Special ApplicationsGFCI-protected circuit wire tracing

- Find breaks, openings, and shorts
- Trace wires in metal conduit
- Trace non-metallic pipes and conduits
- Trace shielded wires through signal detection in junction boxes
- Trace underground wires
- Trace low voltage wires and data cables
- Sort bundled wires
- Map circuits using test leads connection
- Trace breakers on system with light dimmers
- CT-400 signal clamp (AT-6030 kit) to improve accuracy and performance when there is no access to bare conductors
