

IND033 Hornet: Non-Isolated DC-DC Voltage Regulator Modules

12Vdc input; 0.8Vdc to 5.5Vdc output; 33W Max Power

Applications

- ✓ Industrial Equipment
- ✓ Control Boards
- ✓ Test Equipment

Electrical Features

- 12V Input voltage with up to $\pm 20\%$ Tolerance
- Output voltage programmable from 0.8Vdc to 5.5Vdc via external resistor
- Remote On/Off for optional external control
- Power Good signal for external monitoring
- Fixed switching frequency
- Output overcurrent protection (non-latching)

Mechanical Features

- Small size: 12.2 mm x 12.2 mm x 7.25 mm (0.48 in x 0.48 in x 0.29 in)
- Operating range: -40°C to 105°C ambient
- Operating shock to 40G per Mil Std. 810G, Method 516.4 Procedure I
- Operating vibration per Mil Std. 810G, Method 514.5 Procedure I

Process and Safety

- Qualified for 1000h High Temperature Operating Bias, 1000h 85RH/85°C Temperature, Humidity and Bias, 700 cycle -40 to 125°C thermal cycling
- ANSI/UL* 62368-1 and CAN/CSA† C22.2 No. 62368-1 Recognized, DIN VDE‡ 0868-1/A11:2017 (EN62368-1:2014/A11:2017)
- ISO** 9001 and ISO 14001 certified manufacturing facilities
- Compliant to RoHS Directive 2011/65/EU and amended Directive (EU) 2015/863
- Compliant to REACH Directive (EC) No 1907/2006
- Compatible in a Pb-free or SnPb reflow environment.
- Suitable for aqueous clean.
- Suitable for conformal coating with dip and vapor deposition. Conformal coating can provide the protection to meet Salt Fog Test per IEC 60068-2-52 (Severity 3) and Mixed Gas Flow test per Telcordia GR-3108 Outdoor Levels.
- 3 year warranty

Device Code	Input Voltage	Output Voltage	Output Current (Max.)	On/Off Logic	Comcode
IND033	9.6 – 14.4**Vdc	0.8 – 5.5Vdc	6A	Negative	1600102898A

Thermal Performance

Full rated output with natural convection up to 100°C at 1.2Vout and up to 90°C at 5Vout. Thermal curves for 1.2V, 1.8V and 5Vout below.

Electrical Specifications

Parameter	Device	Symbol	Min	Typ	Max	Unit
Operating Input Voltage	All	V_{IN}	9.6	12	14.4**	Vdc
Input No Load Current ($V_{IN} = 12.0\text{Vdc}$, $I_O = 0$, module enabled)	$V_{O, set} = 5\text{Vdc}$	$I_{IN, No load}$		55		mA
External Capacitance, Ceramic ESR $\geq 1\text{ m}\Omega$	All	$C_{O, max}$	10	—	22*	μF
Efficiency 12V _{INDC} , $T_A = 25^\circ\text{C}$, $I = 12\text{A}$, $V_O = 1.2$ to 5Vdc		η	86(1.2V), 89(1.8V), 93(3.3V), 94(5V)			%
Switching Frequency	All	f_{sw}	—	600	—	kHz
Output Voltage (Over all line, load, and temperature conditions until end of life)	All	V_O, set	-3.0	—	+3.0	% V_O, set
On/Off Logic High (MODULE OFF) Input High Voltage	All	V_{IH}	3.0	—	14.4	Vdc
On/ Off Logic Low (MODULE ON) Input Low Voltage	All	V_{IL}	-0.2	—	0.4	Vdc
PGOOD (Power Good) Signal Interface Open Drain, $V_{supply} \leq 5\text{VDC}$ Overvoltage threshold for PGOOD Undervoltage threshold for PGOOD Pulldown resistance of PGOOD pin Sink current capability into PGOOD pin	All All			112.5 87.5 30 5		% $V_{O, set}$ % $V_{O, set}$ Ω mA

*Additional External Capacitance possible using Tunable Loop

** For $0.8 \leq V_{out} < 1$, do not exceed 12Vin. For $1 \leq V_{out} < 1.2$, do not exceed 13Vin. For $V_{out} \geq 1.2$, Input Voltage can be as high as 14.4V

Characteristic Curves

The following figures provide typical characteristics for the IND033 Hornet at 25°C .

Figure 1. Output Ripple Voltage (20MHz BW) for various output voltages and external caps @12Vin. Additional Decoupling cap of 0.1uF used on input and output side

Figure 2. Typical Start-up using Input Voltage ($V_{in} = 12\text{V}$, $V_{out} = V_{out, max}$, $I_{out} = I_{out, max}$)

Trim

Without an external resistor between Trim and GND pins, the output of the module will be 0.6Vdc. R_{trim} for a desired output voltage, should be as per the following table. The formula in the last column helps determine R_{trim} for other voltages.

V_O (V)	0.9	1.2	1.5	1.8	2.5	3.3	5.0	$R_{trim} = \left[\frac{12}{(V_O - 0.6)} \right] k\Omega$
R_{trim} (k Ω)	40	20	13.3	10	6.316	4.4	2.727	

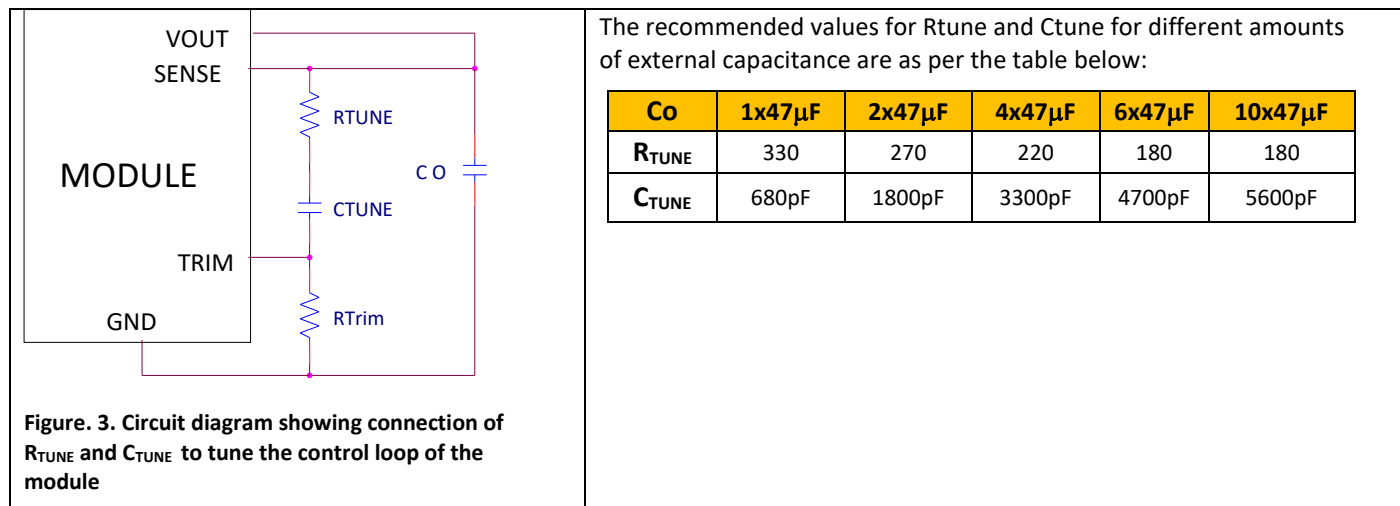

Safety Considerations

For safety agency approval, the power module must be installed in compliance with the spacing and separation requirements of the end-use safety agency standards listed on the first page of this document. For the converter output to be considered meeting the requirements of safety extra-low voltage (SELV) or ES1, the input must meet SELV/ES1 requirements. The power module has

extra-low voltage (ELV) outputs when all inputs are ELV. The input to these units is to be provided with a fast-acting fuse with a maximum rating of 10A, 125VDC in the positive input lead.

Tunable Loop

The module is designed for 1x22 μ F capacitor on its output. For applications where more than 1x22 μ F capacitors would be used on the output, an additional Resistor (R_{tune}) and Capacitor (C_{tune}) would be required in the circuit schematic to compensate for the additional capacitance. The placement is between the Sense+ pin and Trim pin as per figure below:

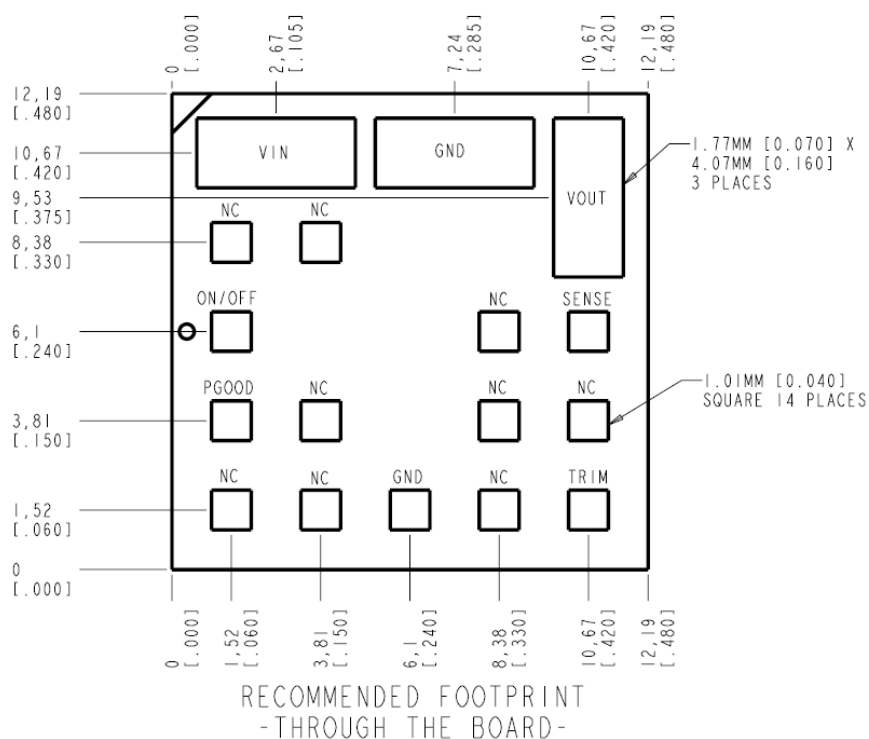

PowerGood (PGOOD)

This is an open-drain output to indicate that the output voltage is within the regulation limits of the module. The PGOOD signal will be de-asserted to a low state if any condition such as overtemperature, overcurrent or loss of regulation occurs that would result in the output voltage going $\pm 10\%$ outside the setpoint value. If not used, leave unconnected.

Recommended Pad Layout

Dimensions are in millimeters and (inches).

Tolerances: x.x mm ± 0.5 mm (x.xx in. ± 0.02 in.) [unless otherwise indicated] x.xx mm ± 0.25 mm (x.xxx in. ± 0.010 in.)

Nozzle Recommendations

The minimum recommended inside nozzle diameter for reliable operation is 3mm. The maximum nozzle outer diameter, which will safely fit within the allowable component spacing, is 7 mm.

Bottom Side / First Side Assembly

This module is not recommended for assembly on the bottom side of a customer board. If such an assembly is attempted, components may fall off the module during the second reflow process

Lead Free Soldering

The modules are lead-free (Pb-free) and RoHS compliant and fully compatible in a Pb-free soldering process. Failure to observe the instructions below may result in the failure of or cause damage to the modules and can adversely affect long-term reliability

MSL Rating

The modules have a MSL rating of 2a.

Pb-free Reflow Profile

Power Systems will comply with J-STD-020 Rev. D (Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices) for both Pb-free solder profiles and MSL classification procedures. The suggested Pb-free solder paste is Sn/Ag/Cu (SAC).

The following profile is the recommended linear reflow profile using Sn/Ag/Cu solder. Soldering outside of the recommended profile requires testing to verify results and performance.

Storage and Handling

J-STD-033 Rev. A (Handling, Packing, Shipping and Use of Moisture/Reflow Sensitive Surface Mount Devices) is recommended. Moisture barrier bags (MBB) with desiccant are required for MSL ratings of 2 or greater. These sealed packages should not be broken until time of use. Once the original package is broken, the floor life of the product at conditions of $\leq 30^{\circ}\text{C}$ and 60% relative humidity varies according to the MSL rating (see J-STD-033A). The shelf life for dry packed SMT packages will be a minimum of 12 months from the bag seal date, when stored at the following conditions: $< 40^{\circ}\text{C}$, $< 90\%$ relative humidity.

Post Solder Cleaning and Drying Considerations

Post solder cleaning is usually the final circuit-board assembly process prior to electrical board testing. The result of inadequate cleaning and drying can affect both the reliability of a power module and the testability of the finished circuit-board assembly
