

## CC12500H3C380TEZ-GM High-Efficiency Water-Cooled Rectifier

 $3\phi$ , 3-Wire  $400/480V_{AC}$  Input; Default Output:  $380V_{DC}$  ( $\pm 190V$ ) @ 12,500W,  $12V_{DC}$  @ 1.8A

### **Applications**

- Supercomputers
- 380Vdc data centers
- Telecom central offices
- Industrial systems

### **Targeted countries**

Australia, Canada, European Union, India, Japan, New Zealand, South Korea, Taiwan, USA

#### **Features**

- Efficiency 96.0% peak typical
- Compact form factor with 24W/in<sup>3</sup> density
- Nominal Dimensions 60.3 x 203.2 x 711.2 mm (2.4 x 8.0 x 28.0in)
- AC Input 3-wire, 3Φ-400/480Vac, 12,500W Rated Output
- Power factor correction (meets EN/IEC 61000-3-2 and EN 60555-2 requirements)
- High Resistance Mid-Point Ground (HRMG) ±190V<sub>DC</sub>
   Output with Internal HRMG Fault detector circuit
- RS-485 Communication Protocol
- Output voltage programmable from 360-400V<sub>DC</sub>
- Output overvoltage and overload protection
- AC Input overvoltage and undervoltage protection
- Over-temperature warning and protection
- Redundant, parallel operation with droop load sharing
- CE mark<sup>§</sup>

1:2014/A11:2017)

standard 19 inch racks.

Remote ON/OFF

Meets FCC part 15 subpart B, EN55032 Class B standards

The CC12500H3C380TEZ-GM is a high

world-wide safety, environmental, and regulatory requirements. The physical package is designed to allow very flexible

positioning into system cabinets, or racks. The rectifier can be mounted in both horizontal

and vertical orientations, and its thin profile

vertically along cabinet's sides, or maximum

stacking density when mounted horizontally in

allows for minimal width when mounted

equipment racks. The width allows two

rectifiers to be mounted side by side in

Redundant +12V<sub>DC</sub> @ 1.8A Aux power

Integrated liquid-cooled cold plate

Hot insertion/removal (hot plug)

Redundant DC output Interlock

Three front panel LED indicators

efficiency, true 3 phase, 3 wire (Delta) AC input,

380Vdc HVDC output, liquid cooled rectifier power supply. The true three phase input eliminates any neutral connection, and ensures tight phase current balancing. The rectifier achieves very high efficiency, >96%, reducing the cooling demands and providing beneficial OpEx savings. The rectifier meets

- Meets EN61000 immunity and transient standards
- Shock & vibration: Meets IPC 9592 Class II standards

ANSI/UL\* 62368-1 and CAN/CSA+ C22.2 No. 62368-1

Recognized, DIN VDE + 0868-1/A11:2017 (EN62368-

## **Technical Specifications**

### **Absolute Maximum Ratings**

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only; functional operation of the device is not implied at these or any other conditions in excess of those given in the operations sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect the device reliability.

Parameter	Symbol	Min	Max	Unit
Input Voltage: Continuous	V <sub>IN</sub>	0	528	$V_{AC}$
Storage Temperature (ensure that all liquid has been removed from cooling pipes for storage temperatures < 2°C)	$T_{stg}$	-40	85	°C
I/O Isolation voltage to Frame (100% factory Hi-Pot tested)			2121	V <sub>AC</sub>

## **Electrical Specifications**

Unless otherwise indicated, specifications apply over all operating input voltage,  $V_0$ =380 $V_{DC}$ , resistive load, and temperature conditions. To meet measurement accuracy a warm up time of 1hr may be required.

### 12V<sub>DC</sub> Auxiliary output⁵

12 V DC Adxillary Sucput					
Parameter	Symbol	Min	Тур	Max	Unit
Output Voltage Setpoint	V <sub>out</sub>		12		$V_{DC}$
Overall Regulation		-10		+10	%
Output Current		0		1.8	А
Over-voltage Clamp			15	16.5	$V_{DC}$
Over-current Limit		105		135	%FL

 $<sup>^{5}12</sup>V_{DC}$  auxiliary output will recover after over-current limit shutdown only if the load is less than 0.8A and output external capacitance is  $500\mu F$  max. With high load and output capacitance, the input power must be recycled to get  $12V_{DC}$  auxiliary output recovery.

<sup>&</sup>lt;sup>4</sup>with one soft-start attempt after 10 seconds

## **General Specifications**

Parameter	Min	Тур	Max	Units	Notes
Unpacked Weight			13	Kgs	
			(28)	(Lbs)	

## **Environmental Specifications**

Parameter		Min	Тур	Max	Units	Notes
Coolant Water Inlet Temperature <sup>6,7</sup>		2		50	°C	
Operating Ambient Air Temperature	•	2		50	°C	
Cooling Flow Rate		0.26		0.5	Gpm	Optional inlet orifice is available to provide minimum flow rate
Cold Plate Inlet Pressu	re			100	psi	
Cold Plate Pressure Dr	qo		10		psi	at the minimum flow rate
Operating Altitude				3000/10k	m/ft	
Non-operating Altitude	(1)			9000/30k	m/ft	
Shock and Vibration C	Operational	Meets IPC 9592 Class II, Section 5 and GR-63_CORE, Level 3 requirements				63_CORE, Level 3 requirements
Earthquake Rating		4			Zone	Meets GR-63_CORE requirements <sup>8</sup>

 $<sup>^{6}</sup>$ Coolant must remain free of algae and corrosion products. The use of suitable inhibitors in the coolant is recommended, compatible with copper tubing. Full-rated output power is available up to  $50^{\circ}$ C inlet water temperature (lower for coolants other than water).

Water connections are indicated by color on faceplate (blue – cool inlet, red – warm exit). Water delivery method should include strain relief feature to mitigate the risk of water leak in the end product. Leak detection and protection mechanisms should be used to mitigate the effect of water leaks. Care must be taken to prevent water clogs that could reduce the water pressure or restrict flow.

<sup>&</sup>lt;sup>8</sup>When installed in a Zone 4 rated cabinet.

**EMC** [Surges and sags applied one  $\Phi$  at a time and all  $3\Phi$ 's simultaneously; phase angles  $0^{\circ}$ ,  $90^{\circ}$ ,  $270^{\circ}$ ]

Criteria	Performance
А	No performance degradation
В	Temporary loss of function or degradation not requiring manual intervention
С	Temporary loss of function or degradation that may require manual intervention
D	Loss of function with possible permanent damage

#### **Feature Descriptions**

Hot swap: The rectifier is equipped with an interlock switch which operates in a redundant scheme with the Interlock short connector pin to ensure output voltage is not present on the output connector while removing or inserting the rectifier into the shelf.

**Power limiting:** There are three distinct mechanisms which trigger power limiting, in which the output voltage is lowered below the programmed value only as much as necessary to achieve the target output power. The purpose of power limiting is to protect the rectifier while giving the larger system time to reduce the load and avoid the disruption of a rectifier shutdown.

The first two mechanisms described below are for overload---above the rectifier rating---while the third occurs below the rectifier rating to prevent overheating. In each case if the load is reduced, the output voltage is raised until it returns to its normal programmed value, ending power limiting. The Over-Power Warning signal described in the next section is asserted for the first two limits below.

- Fast Power Limit reduces output power as quickly as possible to the threshold value, essentially clamping output power.
- 2. Slow Power Limit is triggered by a training-average power calculation, to allow short overloads that are below the fast power limit while preventing extended operation above the rectifier rating. Depending on the severity of the overload & prior load, this limit acts after approximately 2-3 seconds, reducing output power to the rated value over a few more seconds. When in Slow Power limit, the rectifier has a one minute on-time followed by a two minute off-time. This cycle repeats until output current is reduced below the slow power limit threshold.
- 3. Over-Temperature Power Reduction to below the rectifier power rating occurs when the rectifier internal temperature approaches its operating limit. Output voltage is lowered gradually until the internal temperature falls below the inception threshold. The output voltage is regulated at this level until the internal temperature then falls below the "recovery" threshold. In recovery, the output voltage is gradually raised back to the programmed value, unless the "inception"

threshold is exceeded again. If the OT power reduction fails to arrest the temperature rise, e.g. for a total loss of cooling, an over-temperature shutdown is triggered.

#### **Control and Status**

The Rectifier provides two means for monitor/control, analog and the OmniOn RS-485 protocol.

#### **Analog Control Signals**

**Rectifier Enable:** Controls the main  $380V_{DC}$  output. This pin must be pulled low to LGND to turn ON the power supply. The power supply will turn OFF if either Rectifier Enable or Interlock are released.

Interlock Feature: The rectifier operates a redundant interlock scheme using a handle-actuated switch and an interlock pin. Opening the handle turns off 12V and communications will be lost. The interlock pin is a short signal pin that shuts down the rectifier completely upon extraction. The interlock pin must be connected to SEC\_RTN on the system side. The interlock features work in conjunction to ensure that no arcing or connector contact damage occurs to the connector during the hot insertion/extraction process.

**Slot Identification:** Up to 10 different units are selectable by connecting a resistor between SLOT\_ID and SEC\_RTN. Internally this pin is pulled up to 3.3V (±3%) by a 10 kOhm (±1%) resistor. The full tolerance range of the chosen resistor should fall between the minimum and maximum values of Rs listed below to ensure the correct slot number is identified.

Clat ID	Min M	May V	Min Rs	Max R <sub>s</sub>	Std 1%
Slot_ID	Min V <sub>s</sub>	Max V <sub>s</sub>	(ΚΩ)	(ΚΩ)	(ΚΩ)
Invalid	0	0.300	0	1.00	0
0	3.192	3.195	295.56	304.29	301
1	3.269	3.326	OPEN	OPEN	OPEN
2	1.231	1.256	5.95	6.14	6.04
3	1.953	1.991	14.50	15.21	14.7
4	0.798	0.816	3.19	3.29	3.2
5	1.736	1.775	11.10	11.64	11.4
6	0.939	0.956	3.98	4.08	4.02
7	1.482	1.511	8.15	8.45	8.25
8	2.544	2.583	33.65	36.03	34.8
9	2.844	2.894	62.37	71.28	66.5

#### **Analog Status Signals**

Module Present: This signal is used as an OUTPUT signal by the power supply to notify the system controller that a power supply is physically present in the slot. This signal pin is pulled down to LGND by the power supply.

Over-Power Warning (OPW): This signal is HI during normal operation but asserted LO during operation at output power greater than the rectifier rating. This enables load power to be reduced before the Slow Power Limit acts.

If the overload is less than the rectifier Fast Power Limit, OPW is asserted after some delay to allow for short overloads without disruption. OPW is triggered by a training-average power calculation, which shortens the delay for higher loads during and/or before the overload. For example, a repeating 2 seconds of 13.1 kW load followed by 0.8 second of 6.65 kW will NOT trigger OPW, but lengthening the overload pulse to 2.3 seconds WILL trigger OPW intermittently after a few cycles.

If the overload is greater than the Fast Power Limit, OPW is asserted immediately and power is reduced to the fast threshold without warning.

#### **OmniOn RS-485 protocol**

OmniOn will provide separate application notes on the RS-485 based protocol physical, data, and link layers for users to interface to the rectifier. Contact your local OmniOn representative for details.

**Application Layer:** The controller interacts with the system devices using the READ, WRITE, and READ RESPONSE packets. Each packet carries a unique body that details the variables and values of interest in the system device. A READ packet transmits the variable name to the system device, which then returns a value to the controller with the READ RESPONSE packet. The WRITE packet transmits a variable name and new value to a system device, which records it. The WRITE packet is also used to cause specific actions to occur within the device. The variable names and commands that are found in the packet bodies define the Galaxy Power System application. The tables following this section will detail the specific packet body contents. First described are the basic data types used widely in the application. Generic variables that all devices must support are then described followed by the unique variables associated with specific devices.

Table 1 – Basic Data Types

Data Types	<b>Data Type Definition</b>
null	no value
uint8_t	8-bit unsigned integer
uint16_t	16-bit unsigned integer
int16_t	16-bit signed integer
uint32_t	32-bit unsigned integer
int32_t	32-bit signed integer

Note: All multi-byte integer data types are BIG ENDIAN format (MSB, LSB)

Signed numbers are in two's complement format.

**Table 2 – Device Group Number Definitions** 

Variable Name	Group	Description
MASTER_ADDR	00h	Plant controller
BROADCAST	FFh	Broadcast address to all devices
RECTIFIER_ADDR	E8h	High voltage rectifier

### **Table 3 – Variable Allocation**

Variable Range	Description						
00h to 0Ah	Common variables (0Ah read is not common, just write)						
0Bh to 9F	Group specific variables, common within a given group						
0Ah to AFh	Upgrade related commands						
0Bh to DFh	Group specific variables						
0Eh to FFh	Device specific commands typically for lab and debugging. May not be common within a group						

Scaling: Analog quantities are scaled (multiplied) by the following factors, then truncated to an integer:

DC voltage and current 64
AC voltage 100
AC current 200
Temperature in °C 1
Watts 1

#### Table 4 - RS-485 Variable List

Variable Name	Num	Len	<b>Data Type</b>	Description
DUMMY_RW	00h	00h	null	Used to exercise the protocol for test purposes.
SERIAL_NUMBER_RW	01h	12h	uint8_t[18]	Serial number as an array of 18 ASCII characters.
				(e.g. LBGEPE16KZ00000000)
GROUP_ADDRESS_RW	02h	01h	uint8_t	Rectifier group address E8h (multi-cast address)
COMCODE_RW	03h	0Bh	uint8_t[11]	Internal part number up to 11 ASCII characters:
				(e.g. 150047061)
PROTOCOL_CONTROL_W	04h	01h	uint8_t	01h – forces devices to drop the link
STATION_TYPE_R	05h	14h	uint8_t[20]	Product code, up to 20 ASCII characters
				(e.g. CC12500H3C380TEZ-GM)
SERIES_RW	06h	07h	uint8_t[7]	Series identifier, up to 7 ASCII characters (e.g. 1:0)
APPLICATION_VERSION_R	07h			Software version:
Argument:		01h	uint8_t	70h returns PFC version, 73h returns DCDC version
Response:		07h	uint8_t[7]	Format: major,minor,month,day, year,hours, minutes
				Note: If no argument then DCDC version is returned
reserved	reserved 08h			Reserved
TIMEOUT_SCALE_RW	09h	01h	unit8_t	No-activity link timeout in seconds. Default: 10
LAMP_TEST_W	0Ah	00h	null	Lamp Test command
I_R	0Ah	02h	uint16_t	Total output current of rectifier
T_INTERNAL_R	0Bh	01h	unit8_t	Most critical temperature
STATUS_R	0Ch	02h	uint16_t	<u>Device status</u>
ORFET_FAIL_STAT				0001h: 1= ORing FET failure detected
ACF_STAT				0002h: 1 = AC out of range
VOUT_UNBALANCE				0004h: 1 = Vout unbalance warning
TA_STAT				0008h: 1 = Over temperature shutdown 0010h: 1 = Rectifier failure detected
RFA_STAT				0010h: 1 = Rectifier failure detected
AC_LOW_LINE_STAT				0020h: 1 = low input-voltage range (< 432 Vac; power limited)
				0040h: Reserved
				0080h: Reserved
INTERLOCK_STAT		_		0100h: 1 = interlock is open
TRH_STAT				0200h: 1 = Standby from controller requested
HVSD_STAT				0400h: 1 = Over voltage shutdown (requires restart)
ON_STAT				0800h: 1 = On and producing power

	ı		1	hood D
				1000h: Reserved
ID_CHANGED_STAT				2000h: Reserved
				4000h: Reserved
CL_STAT				8000h: 1 = in current limit or power limit
VSET_RW	0Eh	02h	uint16_t	Power up default voltage set-point
CMD_W	0Fh	02h	uint16_t	Device control
STANDBY_CMD				0001h: Place rectifier into Standby
ON_CMD				0002h: Release rectifier from Standby
				0004h: Reserved
				0008h: Reserved
				0010h: Reserved
RESTART_CMD				0020h: Restart after over voltage or over current
LAMPTEST_CMD				0040h: Lamp test
				0080h: Reserved
FAULT_LED_ON				0100h: Request fault LED ON
FAULT_LED_OFF				0200h: Request fault LED OFF
				0400h: Not used
				0800h: Not Used
				1000h: Not Used
				2000h: Not Used
				4000h: Not Used
RESET_ENERGY_CMD				8000h: Reset energy counter
CAPACITY_R	11h	02h	uint16_t	Nominal current capacity of rectifier (Idc x 64)
VCMD_RW	13h	02h	uint16_t	Present output voltage setting
VOP_R	20h	02h	uint16_t	Output voltage measurement
VACIN_RMS_R	29h	06h		Line-to-line AC RMS voltage measurements
			uint16_t	Vab
			uint16_t	Vbc
			uint16_t	Vca
IACIN_RMS_R	2Ah	06h		AC RMS phase current measurements
			uint16_t	Phase A
			uint16_t	Phase B
AC DOWED D	77h	02h	uint16_t	Phase C
AC_POWER_R	37h 39h	02h 04h	uint16_t	AC input power in Watts Hours on and producing power
ON_TIME_R BLOCK_READ_R	73h	04n 0Bh	uint32_t	Block read
BLOCK_READ_R	/311	וומט		
			Uint16_t	Status word
			uint16_t	Vout measurement
			Uint32_t	Accumulated energy in J
			Uint16_t	Instantaneous Output Power in Watts
			Int8_t	Temperature in C

Table 5 – Alarm and LED state summary

		Power Supply LED St	tate
Condition	AC OK Green	Fault Red	DC OK Green
ОК	1	0	1
Over-Temperature Warning (OTW) 5°C before shutdown)	1	Blinks	1
Thermal Shutdown	1	1	0
Blown AC Fuse in Unit	Blinks	1	0
AC Present but not within limits	Blinks	0	0
AC Lost (indicated for 0.5-1 min)	Yellow	0	0
Boost Stage Failure	1	1	0
Over Voltage Latched Shutdown	1	1	0
Over Current	1	0	Blinks
Non-catastrophic Internal Failure	1	1	1
Standby (remote)	1	0	0
Output Unbalance	1	0	Blinks Yel / Grn
Boot Block Mode	0	Blinks	0

### **Table 6 – Signal Definitions**

Pin	Function	Label	Туре	Description								
2A	Interlock	INTERLOCK	Input	Short pin that must be connected to SEC_RTN externally to enable the output. This signal provides the last-to-make and first-to-break function to prevent arcing during hot plug and hot disengagement.								
2B	Slot identification	SLOT_ID	Input	Set to one of 10 levels by an external resistor to SEC_RTN.								
2C	Secondary return	SEC_RTN	Reference	Filtered connection to Vout								
(Signals	(Signals above are referenced to SEC_RTN; signals below are referenced to LGND)											
5B	Over-Power Warning	OPW	Output	Open-drain FET; normally open								
5D, 6D	Standby power	12V_AUX	Output	12V @ 1.8A provided for external use; return is LGND. This output is always ON and OR'ed for paralleling.								
6B	RS485 A signal	RS485_A	1/0	RS485 "+" or non-inverting signal line.								
6C	RS485 B signal	RS485_B	1/0	RS485 "–" or inverting signal line.								
7A	Rectifier Enable	ENABLE	Input	When shorted to LGND, turns ON the main output								
7В	Module Present	MOD_PRES	Output	Short pin connected to LGND, notifies the system that this module is present,								
7C, 7D	Logic Ground	LGND	Reference	Isolated from the main output & SEC_RTN.								

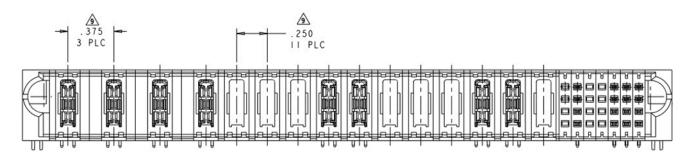

#### **Connector**

Installed in rectifier: TE 4-6450832-7 (pictured below)

• Example mate: 1 ea. TE 1-1892903-9 housing + 8 ea. TE 1600903-1 power receptacles + 7 ea. TE 1600902-1 four-position signal inserts

<sup>=</sup> System side mating connector must have its Frame GRD pin the longest to ensure that it is mating first.

### Connected Internally:

P8 & P9

P13 & P14

D5 & D6

C7 & D7

### **Cable Assembly**

For convenient connection without a shelf (see photo under "Accessories").

#### **Connectors:**

AC Installed: Molex 42818-0412 4-circuit single-row 10mm-pitch Mini-Fit Sr.™ housing + crimp terminals Molex 42817-0032 (ground) & 3 ea. Molex 42817-0012:

• Example mate: Molex 42816-0412 Receptacle Housing + 4 ea. Molex 42815-0012 - female crimp terminals, 12-10 AWG

DC Installed: 4 ea. TE 640907-2 female Fast-on

Signal installed: Molex 43025-1400 Micro-Fit 3.0™ housing + 12 ea. Molex 43030-0002 female crimp terminals

• Example mate: Molex 43045-1413 Vertical Header, Dual Row, 14 circuits

Pin	Function	Name	Rectifier		
1	RS485 signal B (inverting)	RS485_B	6C		
2	Logic Ground (signal return)	LGND	7D		
3	12V+	12V_AUX	6D		
4	Module present	MOD_PRES	7B		
5	Enable	ENABLE	7A		
6	rsvd blank				
7	Secondary Return	SEC_RTN	2C		
8	RS485 signal A (non-inverting)	RS485_A	6B		
9	Logic Ground (signal return)	LGND	7C		
10	12V+	12V_AUX	5D		
11	Over Power Warning	OPW	5B		
12	rsvd blank				
13	Slot ID	SLOT_ID	2B		
14	Interlock	INTERLOCK	2A		

INTERLOCK (pin 14) must be connected to SEC\_RTN (pin 7) to enable the rectifier.

Rectifier signals not available from harness:

- DC\_OK (5A)
- RACK\_ID (5C)

#### **Coolant Dripless Fittings**

For convenient connection of coolant delivery hoses.

#### CC12500H3C380TEZ-GM:

The chiller plate is equipped with two dripless plugs: LQ2D4604BLU (CPC).

Recommended mating sockets can be purchased from CPC (Colder Products Company).

#### CC12500H3C380TEZ-LN:

The chiller plate is equipped with the following dripless plugs:

- SCG03.7150/JE/KB/FS BLUE plug for Inlet
- SCG03.7150/JE/KR/FS RED plug for Outlet

Recommended mating sockets SCG03.1150/JE/KB/FS and SCG03.1150/JE/KR/FS can be purchased from Staubli Corporation.
