

GP100 6 kW Rectifier GP100L3R48TEZ

3Φ - 200/208/240V_{AC} Input; Default Output: 48V_{DC}@ 6000W – GP interface

RoHS Compliant

The GP100L3R48TEZ series of rectifiers provide significant efficiency improvements in the Global Platform of Power supplies. High-density front-to-back airflow is designed for minimal space utilization and is highly expandable for future growth. The 3Φ – 200/208/240V_{AC} input product is designed to be deployed internationally. It is configured with an isolated RS485 compliant communications bus that allows it to be used in a broad range of applications. Feature set flexibility makes these rectifiers an excellent choice for applications requiring modular, very-high-efficiency AC to -48V_{DC} intermediate voltages, such as in distributed power.

Applications

- 48V_{DC} distributed power architectures
- Routers/ VoIP/Soft and other Telecom Switches
- LAN/WAN/MAN applications
- File servers, Enterprise Networks, Indoor wireless
- SAN/NAS/iSCSI applications

Features

- Efficiency 96.5% typical, exceeds 80plus Titanium levels
- Compact 1RU form factor with 30 W/in³ density
- Constant power from 48 – 58V_{DC}
- 6000W from nominal 3Φ – 200/208/240V_{AC}
- Isolated RS485 based serial bus
- Power factor correction (meets EN/IEC 61000-3-2 and EN 60555-2 requirements)
- Output overvoltage and overload protection
- AC Input overvoltage and undervoltage protection
- Over – temperature warning and protection
- Redundant, parallel operation with active load sharing
- Internally controlled Variable-speed fan
- Hot insertion/removal (hot plug)
- Three front panel LED indicators
- EN/IEC/UL/CSA C22.2 62368-1 2nd edition +A1
- CE mark[§]
- Meets FCC part 15, EN55032 Class A standards
- Meets EN61000 immunity and transient standards
- Shock & vibration: Meets IPC 9592 Class II standards

* UL is a registered trademark of Underwriters Laboratories, Inc.

† CSA is a registered trademark of Canadian Standards Association.

§ This product is intended for integration into end-user equipment. All CE marking procedures of end-user equipment should be followed. (The CE mark is placed on selected products.)

** ISO is a registered trademark of the International Organization of Standards

Technical Specifications

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only, functional operation of the device is not implied at these or any other conditions in excess of those given in the operations sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect the device reliability.

Parameter	Symbol	Min	Max	Unit
Input Voltage: Continuous	V_{IN}	0	600	V_{AC}
Operating Ambient Temperature ¹	T_A	-10	75	°C
Storage Temperature	T_{stg}	-40	85	°C
I/O Isolation voltage to Frame (100% factory Hi-Pot tested)			2087	V_{AC}

Electrical Specifications

Unless otherwise indicated, specifications apply over all operating input voltage, $V_o = 48V_{DC}$, resistive load, and temperature conditions. Please contact OmniOn 24/7 Technical Support for any additional information on other specific operating conditions not described. To meet measurement accuracy a warm up time of 1hr may be required.

INPUT

Parameter	Symbol	Min	Typ	Max	Unit
Startup Input Voltage	V_{IN}		176		V_{AC}
Operating Voltage Range (3Ødelta with safety frame ground)	V_{IN}	180	200/208/ 240	275	V_{AC}
Voltage Swell (no damage)	V_{IN}			300	V_{AC}
Frequency	F_{IN}	47	50/60	63	Hz
Operating Current (3Ø - all phases operational 200-240 V_{AC})	I_{IN}		24-16		A_{AC}
Inrush Transient (per Ø at 208 V_{AC} , 25°C, excluding X-Capacitor charging)	I_{IN}		25	30	A_{PK}
Leakage Current (per Ø, 275 V_{AC} , 60Hz)	I_{IN}			5	%
Power Factor (50 – 100% load)	PF	0.96	0.995		
Efficiency Peak	h		95.0		%
Holdup time (output allowed to decay down to 40 V_{DC})	T		8		ms
Ride through (at 208 V_{AC} , 25°C)	T		1/2		cycle

¹ See the derating guidelines under the Environmental Specifications section

Earthquake Rating		4			Zone	Meet GR-63_CORE requirements
Insulation Resistance						

⁵ Designed to start and work at an ambient as low as -40°C, but may not meet operational limits until above -10°C

⁶ The maximum operational ambient is reduced in Europe in order to meet certain power cord maximum ratings of 70°C. The maximum operational ambient where 70°C rated power cords are utilized is reduced to 60°C until testing demonstrates that a higher level is acceptable.

Criteria

Performance

- A No performance degradation
- B Temporary loss of function or degradation not requiring manual intervention
- C Temporary loss of function or degradation that may require manual intervention
- D Loss of function with possible permanent damage

Technical Specifications (continued)

Timing diagrams

Response to input fluctuations

T1 – ride through time – 0.5 to 1 cycles [10 – 20ms] V_{OUT} remains within regulation – load dependent

T2 – hold up time - 15ms – V_{OUT} stays above 40V_{DC}

T3 – delay time – <5s – from when the AC returns within regulation to when the output starts rising

T4 – rise time – varies according to output loading, up to 8 seconds at full load

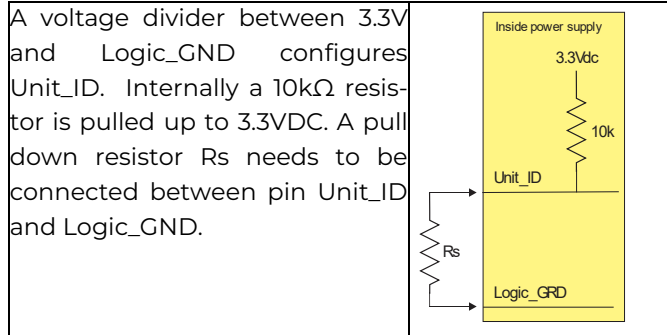

Technical Specifications (continued)

Control and Status

This Rectifier incorporates the OmniOn Galaxy, RS485 based, protocol. OmniOn will provide separate documentation on the Galaxy RS485 based protocol for users desiring to interface to the rectifier. Contact your local OmniOn representative for details.

Control Signals

Bay_ID⁷: Up to 10 different units are selectable.

Bay_ID	Voltage level	$R_s (\pm 0.1\%)$
Invalid	3.30	
1	3.00	100k
2	2.67	45.3k
3	2.34	24.9k
4	2.01	15.4k
5	1.68	10.5k
6	1.35	7.15k
7	1.02	4.99k
8	0.69	2.49k
9	0.36	1.27k
10	0	0

Device address in RS485 mode: The address in RS485 mode is divided into two components; Slot_ID and Shelf_ID

Slot_ID: Up to 10 different modules could be positioned across a 19" shelf if the modules are located vertically within the shelf. The resistor below needs to be placed between Slot_ID and Vout (-). Internal pull-up to 3.3V is 10kΩ.

Slot	Resistor	Voltage	Slot	Resistor	Voltage
invalid	none	3.3V	6	7.15k	1.35V
1	100k	3V	7	4.99k	1.02V
2	45.3k	2.67V	8	2.49k	0.69V
3	24.9k	2.34V	9	1.27k	0.36V
4	15.4k	2.01V	10	0	0
5	10.5k	1.68V			

⁷ Bay_ID and Unit_ID are the same signals.

⁸ Dual functionality of Slot_ID and Interlock

Shelf_ID: When placed horizontally up to 20 shelves can be stacked on top of each other in a fully configured rack. The shelf will generate the precision voltage level tabulated below referenced to Vout (-).

Shelf	V_{MIN}	V_{NOM}	V_{MAX}
Fault	0	0	0
1	1.21	1.23	1.24
2	2.42	2.45	2.48
3	3.63	3.68	3.72
4	4.84	4.90	4.96
5	6.06	6.13	6.20
6	7.27	7.35	7.43
7	8.48	8.58	8.67
8	9.69	9.80	9.91
9	10.90	11.03	11.15
10	12.11	12.25	12.39
11	13.32	13.48	13.63
12	14.53	14.70	14.87
13	15.74	15.93	16.11
14	16.95	17.15	17.35
15	18.17	18.38	18.59
16	19.38	19.60	19.82
17	20.59	20.83	21.06
18	21.80	22.05	22.30
19	23.01	23.28	23.54
20	24.22	24.50	24.78

Interlock⁸/Interlock2: This is a short pin utilized for hot -plug applications to ensure that the rectifier turns **OFF** before the power pins are disengaged. It also ensures that the rectifier turns **ON** only after the power pins have been engaged. Must be connected to V_OUT (-) for the rectifier to be ON.

8V_INT: Single wire connection between modules, provides redundant bias to the DC/DC control circuitry of an unpowered module.

LEDs

Three LEDs are located on the front faceplate. The AC_OK LED provides visual indication of the INPUT signal function. When the LED is ON GREEN the rectifier input is within normal design limits.

The second LED is the DC_OK LED. When GREEN the DC output is present. When 'blinking' a power limit or overload condition exists. When OFF the output is not present.

The third LED is the FAULT LED. A continuous RED condition indicates a fault. Blinking of the RED LED indicates loss of communications

Technical Specifications (continued)

Table 2: Alarm and LED state summary

Condition	Rectifier LED State			Monitoring Signals ¹¹			
	AC OK Green	DC OK Green	Fault Red		Fault		Module Present
OK	1	1	0		HI		LO
Thermal Alarm (5°C before shutdown)	1	1	Blinks		HI		LO
Thermal Shutdown	1	0	1		LO		LO
Defective Fan	1	0	1		LO		LO
Blown AC Fuse in Unit	1	0	1		LO		LO
AC Present but not within limits	Blinks	0	0		HI		LO
AC not present ⁹	0	0	0		HI		LO
Boost Stage Failure	1	0	1		LO		LO
Over Voltage Latched Shutdown	1	0	1		LO		LO
Over Current	1	Blinks	0		HI		LO
Non-catastrophic Internal Failure ¹⁰	1	1	1		LO		LO
Missing Module							HI

Table 3: Signal Definitions

Signals are referenced to Logic_GND unless otherwise stated.

Function	Label	Type	Description
Module Present	MOD_PRES	Output	Short pin, Connected to Logic_GND notifies the system that module is present,
Slot Address/ Interlock	Slot_ID INTERLOCK	Input	Short pin referenced to Vout(-) . This signal provides the last-to-make and first-to-break function to properly control the rectifier for hot plug and hot disengagement. A voltage level identifies the rectifier slot address in a shelf.
Shelf Address	Shelf_ID	Input	A voltage level referenced to Vout (-) identifies the shelf address
Bay Address	Bay_ID	Input	
DC-DC Back bias	8V_INT	Bi-direct	Used to back bias the DSP from other operating Power supplies. Ref: Vout (-).
Interlock2	INTERLOCK 2	Input	A short pin referenced to Logic_GND. This signal provides a second interlocking feature of last-to-make and first-to-break function to properly control the rectifier for hot plug insertion and disengagement.

⁹ This signal is correct if the rectifier is back biased from other power supplies in the shelf.

¹⁰ Any detectable fault condition that does not cause a shutting down. For example, ORing FET failure, boost section out of regulation, etc.

¹¹ Signal transition from HI to LO is output load dependent.
