

har-modular D2 data module male str 4,8

Part number	02 53 902 1502
Specification	har-modular D2 data module male str 4,8
HARTING eCatalogue	https://b2b.harting.com/02539021502

Image is for illustration purposes only. Please refer to product description.

Identification

Category	Connectors
Series	har-modular [®]
Element	Male connector
Description of the contact	Straight

Version

Width of the module	5.08 mm			
Termination method	Solder termination			
Shielding	Fully shielded, 360° shielding contact			
Connection type	Mezzanine			
Number of contacts	2			
Contact configuration	r+t			
Termination length	4.8 mm			

Technical characteristics

Transmission characteristics	10GBASE-KR Ethernet
	100GBASE-KR4 Ethernet
	PCIe Gen 2
	PCIe Gen 3
	PCIe Gen 4
	USB 3.0
	USB 3.1
	Hypertransport 3
	SAS 2.0
	SAS 3.0
	Infiniband FDR
	SATA 3.2

Technical characteristics

Data rate	10 Mbit/s 100 Mbit/s 1 Gbit/s 5 Gbit/s 10 Gbit/s 25 Gbit/s
Clearance distance	2.05 mm in the module 0.25 mm to module edge
Creepage distance	2.05 mm in the module0.25 mm to module edge
Insulation resistance	>10 ¹¹ Ω
Contact resistance	<20 mΩ
Shielding resistance	<100 mΩ
Limiting temperature	-55 +125 °C (during reflow soldering max. +240 °C for 15 s)
Insertion force	10 N
Withdrawal force	10 N
Performance level	1
Mating cycles	≥500
Hot plugging	No

Material properties

Material	Polyamide (PA)		
Material (contacts)	Copper alloy		
Surface (contacts)	Noble metal over Pd/Ni over Ni Mating side Sn over Ni Termination side Ni Mating side (shielding) Sn over Ni Termination side (shielding)		
Material flammability class acc. to UL 94	V-0		
RoHS	compliant		
ELV status	compliant		
China RoHS	e		
REACH Annex XVII substances	Not contained		
REACH ANNEX XIV substances	Not contained		
REACH SVHC substances	Not contained		
California Proposition 65 substances	Not contained		
Requirement set with Hazard Levels	R26

Specifications and approvals

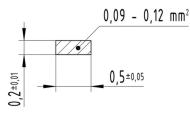

Railway classification	F1/I2 acc. to NFF 16-101/102		
Commercial data			
Packaging size	40		
Net weight	1.2 kg		
Country of origin	Romania		
European customs tariff number	85366990		
GTIN	5713140573482		
ETIM	EC002637		
eCl@ss	27460201 PCB connector (board connector)		

Cross section of solder termination

2x Contacts

Cross section of solder termination

6x Shielding

Quantity of solder paste

Before the components are assembled, solder paste must be applied to all the solder pads (for connecting surfacemount components) and the plated through holes. To ensure that the plated through holes are completely filled, significantly more solder paste must be applied than traditional solder pads on the pcb surface. There are numerous calculation methods available which are complicated to apply. The following rule of thumb has proved valuable in practice.

Required volume of paste = 2x (Volume of plated through hole - Volume of the connector termination in the hole) Comment: the multiplier "2" compensates for solder paste shrinkage during soldering. For this purpose, it was assumed that 50% of the paste consists of the actual solder, the other 50% being soldering aids.

Soldering instructions

THR (ThroughHoleReflow) connectors are designed to be used in a reflow oven together with other SMD (SurfaceMountDevice) components. In the process, called as well "Pin in Hole Intrusive Reflow", the connectors are inserted into plated through holes in a comparable way to conventional component mounting. All other components can be assembled on the pcb surface.

The length of the connector contacts should be such that they protrude by no more than 1.5 millimetres after insertion to the pcb. Each contact collects solder on its tip as it penetrates the solder paster in the hole. So if the contact is too long, this solder would no longer be able to reflow back into the plated through hole by capillary action during the soldering process, therefore the quality of the soldered connection would suffer as a result.

Soldering instructions

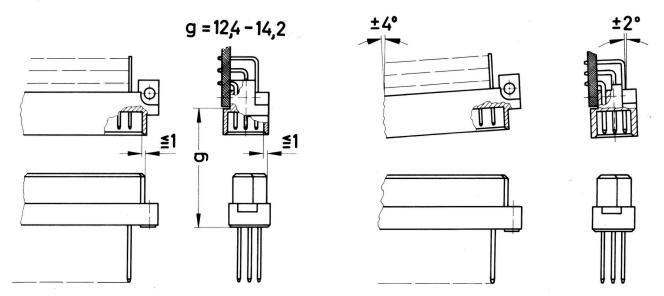

The connectors should be protected when being soldered. Otherwise, they might become contaminated as a result of soldering operations or deformed as a result of overheating.

1) For prototypes and short runs protect the connectors with an industrial adhesive tape, e.g. Tesaband 4331 (www.tesa.de). Cover the underside of the connector moulding and the adjacent parts of the pcb as well as the open sides of the connector. This will prevent heat and gases of the soldering apparatus from damaging the connector. About 140 + 5 mm of the tape should suffice.

2) For large series a jig is recommended. Its protective cover with a fast action mechanical locking devie shields the connectors from gas and heat generated by the soldering apparatus. As an additional protection a foil can be used for covering the parts that should not be soldered.

3) For prototypes and short runs the protection described under point 1) can be replaced by a solder protection cap. This cap can be ordered under the part no. 09 02 000 9935.

Mating conditions

To ensure reliable connections and prevent unnecessary damage, please refer to the application data diagrams. These recommendations are set out in IEC 60603-2.

The connectors should not be coupled and decoupled under electrical load.
