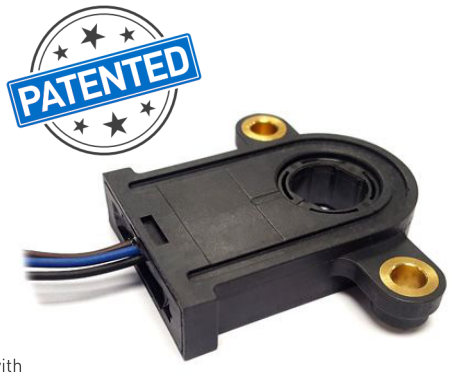
PST-360

Hall-Effect Through-Shaft Rotary Position Sensor



Available with CAN

CE

DESCRIPTION

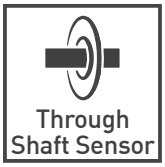
The PST-360 position sensor combines a through-shaft design with accurate absolute position feedback and a true non-contacting sensing element that does not rely on gears or other rotating parts.

This innovative and unique patented design complements the attributes of the target application and maintains the mechanical integrity of the application by design. As the sensor is mounted directly at the pivot point no levers, connecting rods or other mechanical interfaces are needed. Furthermore it adapts to shaft's eccentricity, mounting tolerances and mechanical wear over the life of the application.

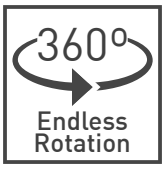
The endless rotation sensor is highly configurable with a programmable angular range between 15 and 360 degrees, different signal output options and support for low and high-voltage power supply. Multi-turn configurations are available on request.

KEY FEATURES

True, contactless operation
Without any gears or mechanical interfaces the sensor is easily assembled and calibrated and subject to limited wear and tear over lifetime.



Through-hole design
Allows shaft insertion from top or bottom, simple assembly and makes it even more suitable in applications where space is limited.



360 degree absolute position feedback
Endless mechanical rotational angle without dead band, keeps the position on power loss with programmable electrical angles from 15 to 360 degrees.

Made for harsh environments
The rugged package protects the sensor from dust, moisture, vibration and extreme temperatures for usage in the most demanding environments.

Durable and robust design
The non-contacting design allows for an extra-long product lifetime of up to 50 million cycles.

Adaptable to your requirements
Programmable transfer function and switch outputs as well as different output protocols and redundancy levels available.

APPLICATIONS

Industrial
- Autonomous warehouse robotics
- Robotics and automation feedback
- Robot arm position
- Valve monitoring
- Conveyor operation

Transportation
- Steering angle
- Pedal position
- Fork height and mast tilt
- Bucket position
- Hitch position
- Boom angle
- Joystick controls

Marine
- Steering and shifter sensor
- Engine throttle

Home and Building Automation
- HVAC systems

Medical
- Electric hospital bed
- Mobility chair steering and throttle

MECHANICAL SPECIFICATIONS

Rotational life	Up to 50.000.000 cycles
Mechanical angular range	360° (endless rotation)
Rotor diameter[1]	14mm 17mm

[1] Other rotors on request

ELECTRICAL SPECIFICATIONS

Linearity[1]	Analog, PWM, SPI CAN	±1% absolute (±0.5% upon request) ±3 degrees absolute
Electrical angular range[2]		Programmable from 15° to 360°
Output		Analog (ratiometric), PWM Serial Protocol (SPI) CAN SAE J1939 CAN Open
Switch output		Programmable upon request
Resolution	Analog, CAN, PWM SPI	Up to 12 bit Up to 14 bit
Supply voltage[3]	Analog, PWM, SPI Analog, PWM, SPI, CAN	5V ±10% 7V to 15V
Supply current	Single version Redundant version CAN version	Typ 8.5 mA Typ 17 mA Typ 47 mA
Voltage protection		±10 V
Self-diagnostic features		Yes

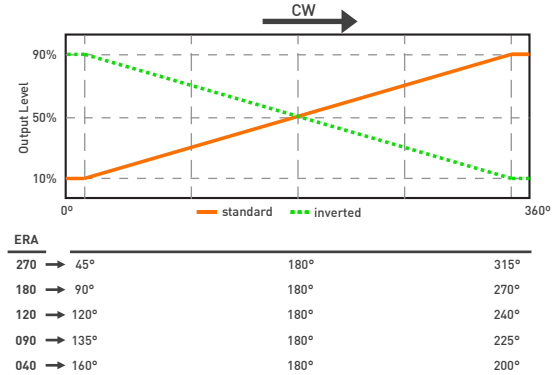
[1] Ferromagnetic materials close to the sensor (i.e. shaft, mounting surface) may affect the sensor's linearity.
[2] For information on multi-turn sensors please contact Piher
[3] Voltages up to 25 V possible on request

ENVIRONMENTAL SPECIFICATIONS

Operating and storage temperature[1]	Analog, PWM, SPI CAN	-40°C to +125°C -40°C to +85°C
Shock		50g from 15° to 360°
Vibration		5-2000 Hz; 20g; Amax 0,75 mm
Sealing[2]		IP67, IP69K
Approval		CE[3]

[1] Other specifications available
[2] IP rating on electronics
[3] EMC-testing according to standards EN 61000-6-2 and EN 6100-6-3. CE-approval applies to analogic-simple and analogic-redundant models.

OUTPUT FUNCTIONS



ERA

1 Other rotors available on request.

2 The analog output is ratiometric, proportional: - for supply voltage "5V" to input voltage; -for supply voltage "RE" to 5V.

3 Other output functions available, please check availability. Enter CXXXX as long as the new output function is not defined.

4 Models with ERA ‹ 40° available on request .

5 CAN models are available in 7V-15V. For other voltages up to 25V: check availability.

6 CAN models: other temperatures to be studied on request.

7 Leave empty if not applicable. Default frequency is 200 Hz.

MOUNTING INSTRUCTIONS

1. Place the component on a flat surface.
2. Fit the shaft of the application (see recommended shaft dimensions) through the sensor's rotor avoiding any mechanical play/wobble.
3. Fasten the two M5 screws (M5 washers are recommended).

OUR ADVANTAGE

- ▸Leading-edge innovative position sensing solutions
  - ▹Contactless (Hall-effect and Inductive Technology)
  - ▹Contacting (Potentiometers, Printed Electronics)
- ▸Engineering design-in support
- ▸All our products can be customized to fit target application and customer requirement
- ▸Capability to move seamlessly from development to true high-volume production
- ▸A global footprint with global engineering and commercial support
- ▸One-stop shop not limited to position sensors (temperature, pressure, gas,...) through group collaboration
- ▸Flexibility and entrepreneurship of a medium-sized company with the backing of Amphenol Corporation

Please always use the latest updated datasheets and 3D models published on our website.
