

User-configurable intelligent vibration transmitter

iT301

Wilcoxon's new intelligent vibration transmitters measure and process dynamic vibration signals. The iT301 is optimized for process control and monitoring, with a variety of options for input signals, a wide frequency response, selectable band filters and detector types, and flexible output mapping options. The transmitter is MODBUS/RS485 enabled and features a built-in web server interface for efficient user configuration in the field.

2 user-configurable independent processing bands

See page 3 for system architecture and page 4 for more details on the iT301's built-in web server.
