

## A close-up photograph of a metal buckle, likely a prong buckle, showing its metallic texture and a central gold-colored component. The buckle is oriented horizontally and features a wide, flat strap on the left side that tapers into a central mechanism. This mechanism includes a small, rectangular, gold-colored piece, possibly a decorative element or a functional part of the clasp. The entire buckle is set against a dark, textured background.

## KEY FEATURES

- 3.40L x 1.10W x 1.80H mm
- Forward contact
- Side protected
