

HRS-Original Multi-purpose High-pin-count Miniature Waterproof Connectors

RM-W Series

Overview

RM-W series connectors originally developed by Hirose offer miniature waterproof connectors to satisfy the requirements of high-capability in a small package.

The locking structure adopts a thread coupling style, showing superior waterproof reliability.

Features

1. Rich variation

In RM-W series, you can select an optimal product for your application through different kinds of both plugs and receptacles.

Plugs :

Available in 3 types - straight plug, straight low-height plug, and right-angled plug.

Receptacles :

Fixing methods :

Available in 2 types-Jam nut type and screw tightening type with square flange. The Jam nut types offer a front or back mount application.

Available numbers of contacts :

2, 4, 8, 10, 12, 15, 20, 40 contacts in 2 contact plating types: gold or silver.

2. Waterproof structure

When fully mated, the connectors meet the waterproof requirements of IP68.

3. Flexible cable arrangements

The assembly type right-angled plugs permit exiting of the cable over a 360-degree range in any direction.

JR13WCC-10(72)

An exploded view diagram of the JR13WCC-10(72) connector assembly. The assembly consists of three main components: a large, cylindrical metal housing with a threaded end; a smaller, cylindrical metal ring; and a black, cylindrical O-ring. The components are shown in a disassembled state, with the O-ring positioned to the right of the ring, and the ring positioned to the right of the housing. The background is a light blue gradient.

◆ Plug – Disassembly / Assembly

Table 1

Part No.	No. of contacts	A	B
RM15WTPZA-***	2,4,8,10,12	3mm	21mm
RM15WTPZ-***	2,4,8,10,12		12mm
RM15WTLP-***	10,12		25mm

Disassembly

1. ① Fix the plug in the assembly fixture (RM15TP-T01 (HRS No.150-0098-0)), then remove the insulator body (P) and the back shell. Right-angle plugs have set screws in the tightening ring at 2 locations. Loosen the set screws before removing the back shell.
② Remove the 2 screws of the strain relief clamp, and then remove the clamp from the tightening collar.

Wiring

- ① Assure that the cable outer diameter will fit the strain relief clamp, and is prepared as recommended in Table 1. It is recommended that the exposed conductors be pre-soldered, to assure easier insertion in the soldering cup.
2. ② Pass the parts over the cable in the order of: tightening collar, washer, bushing, back shell, and coupling. Refer to the drawings (above) for assembly orientation of all components.
③ Solder the wires to the contacts of the insulator body (P).
Use of heat-shrink tubing or another insulating media between the soldered contacts is suggested.

Connector Assembly

Straight Plugs

- ① Place the completely wired insulator body (P) in the assembly fixture secured in a vise. Insert in the coupling, then back shell. The back shell should be tightened to a torque of 3N·m.

Right-angle Plugs

- ① Place the completely wired insulator body (P) in an assembly fixture secured by a vise. Insert in the coupling, then back shell (with tightening ring). When attaching the back shell, orient the cable in the desired direction and fasten the tightening ring to the insulator body (P) with a torque of 3N·m. After this, tighten and fix the 2 sets crews with a torque of 0.2 to 0.25N·m.
3. Additional assembly recommendations :
In applications where continuous extremely high vibrations may be encountered it is recommended that a thread locking compound be applied to male threads prior to assembly (Loctite 263 manufactured by Henkel Japan K.K. or equivalent)
② Assemble in the following order : gasket then washer, then the tightening-collar. During assembly, make sure to keep the tip of the cable sheath at least 3mm from the gasket, as shown in the figure (above).
③ To prevent loosening of the male threads, apply Loctite 263 (Henkel Japan K.K. or equivalent) to the male threads of the back shell. Then tighten the tightening-collar to a torque of 3N·m with the clamp and the cable so that the cable cannot rotate. (Screw-tightening torque : 0.65 to 0.70N·m)

Points to be checked

- ① This connector has a waterproof feature. Please verify that the assembled connector is waterproof by conducting the test described below.
4. ② Because the force required to secure the strain relief clamp differs with the cable structure, please check the connector assembly before use to make sure there is no rotation.
(Test verification of waterproof capability)
Apply air pressure of 17.6kPa for 30 seconds from the mating end of the plug connector. No air should leak from inside the connector.

Precautions

5. The waterproof capability may be impaired if the cable sheath or gasket is damaged or contaminated when performing the assembly. Please handle carefully.

◆ **Precautions**

1. Switch off the power of the circuit before disconnecting or plugging- in the connectors.
2. Use a connectors with socket contacts at the power side of the circuit.
3. Make sure that the coupling is in completely cocked position.
4. Use correct plug / receptacle to assure water protection.

Note 1 : Cable jacket diameter : Use A ± 0.2mm.

Note 2 : Code cramp No. should be the same as connector shell No.

Note 3 : When using the self-tightening strain relief verify the cable pull force requirements.

Note 4 : Recommended set screw tightening torque : 0.2 to 0.3N·m.

For RM21WTR	22.1	12.75	0.8
For RM31WTR	32.1	17.75	0.85

Note : Tolerance is +0.1/0.

For RM**WTR receptacles

Note 1 : When attaching the receptacle to the panel, be certain to check that the gasket is in place in the groove. Do not pinch the gasket.

Note 2 : The view of the above diagrams is from the receptacle mating side.

Note 3 : The ▼ symbol in the above diagrams indicates the coupling guide position of the receptacles.

◆ Contact Arrangement and Specifications

Contact arrangement	Shell size : 21		Shell size : 31
Number of contacts	15	20	40
Withstanding voltage	1,500V AC / 1 minute	1,000V AC / 1 minute	1,800V AC / 1 minute
Current rating	5A		
Insulation resistance	1,000MΩ min.		
Contact resistance	4mΩ max.		
Solder pot inner diameter	1.1mm		

Note 1 : The contact configuration as viewed from the wiring side.

Note 2 : The ▼ symbol in the above diagrams indicates the coupling guide position of the receptacles.

Note 3 : Withstanding voltages indicate test voltage values.

◆ Precautions

1. Switch off the power of the circuit before disconnecting or plugging- in the connectors.
2. Use a connectors with socket contacts at the power side of the circuit.
3. Make sure that the coupling is in completely locked position.
4. Use correct plug / receptacle to assure dust and water protection.
