

Model 13

Subminiature Load Cell

DESCRIPTION

Model 13 (compression only) subminiature load cell is designed to measure load ranges from 150 g to 1000 lb. With subminiature dimensions, including diameters from 0.38 in to 0.75 in and heights of 0.13 in to 0.25 in, these units are easily incorporated into systems having limited space. Model 13 combines high

frequency response and low deflection to achieve a combined non-linearity and hysteresis of 0.25 % to 0.5 % full scale. A balance module is included in the load cell's lead wire cable for temperature compensation and should not be removed.

FEATURES

- 150 g to 1000 lb
- 0.7 % accuracy
- mV/V output
- Subminiature design
- Single diaphragm construction

NOTES

1. Allowable maximum loads – maximum load to be applied without damage.² Loads described allow for 100 % full scale axial loading with the bending loads specified. Torque loading maximum is without axial or other load. For any other combination, consult factory.
2. Without damage - loading to this level will not cause excessive zero shift or performance degradation. The user must consider fatigue life for long term use and structural integrity. All structurally critical applications (overhead loading, etc.) should always be designed with safety redundant load paths.
3. A small, 2 in circuit board is included in the cable, 2 ft from the load cell. Do not remove this board.
4. Only for ranges greater-than-or-equal-to 1000 g.
5. Specifications may vary with this option.
6. This unit calibrated to Imperial (non-Metric) units.
