

High Voltage and ESD Protection Bipolar Hall-Effect Digital Position Sensor ICs: SS41K6

Issue 1

Datasheet

DESCRIPTION

The SS41K6 sensor ICs are versatile digital Hall-effect devices operated by the magnetic field from a permanent magnet or an electromagnet, and are designed to respond to alternating North and South poles. The built-in regulator provides enhanced operation stability from 4.5 Vdc to 60 Vdc supply voltage range, and internal circuitry is designed to prevent sensor damage in case the supply voltage polarity is accidentally reversed. Output short circuit protection is enabled when the output load current exceeds the rated load current specified in Table 1. The open-collector, sinking output voltage can be easily interfaced with a wide variety of electronic circuits. These products are available in a flat TO-92-style package with straight leads in bulk packaging.

FEATURES

- ESD protected +16 kV (HBM - Human Body Model)
- Enhanced supply voltage range of 4.5 Vdc to 60 Vdc allows use in a wide variety of applications
- Current consumption of only 5 mA max. at 4.5 Vdc provides energy efficiency
- Output short circuit protection
- Bipolar magnetics for ring magnet applications with alternating North and South poles
- Temperature range of -40°C to 150°C [-40°F to 302°F]
- RoHS-compliant materials meet Directive 2002/95/EC
- Small, leaded, flat TO-92-style package allows for a compact PCB layout

POTENTIAL APPLICATIONS

- **Transportation:** Speed and RPM sensing, electric motor commutation and control
- **Industrial and Commercial:** Flow-rate sensing for appliances, tachomotor counter pickup, brushless dc motor commutation, motor and fan control
- **Medical:** Equipment or instruments that use electric motors

PORTFOLIO

Other bipolar digital position sensor ICs include:

- SS30AT, SS40A, SS50AT
- SS311PT, SS411P
- SS40F, SS40AF
- SS400 Series, SS500 Series (selected catalog listings)
- SS41, SS41-L, SS41-T2, SS41-T3, SS41-S, SS41-SP
- SS51T

NOTICE

These Hall-effect sensor ICs may have an initial output in either the ON or OFF state if powered up with an applied magnetic field in the differential zone (applied magnetic field $>B_{RP}$ and $<B_{OP}$). Honeywell recommends allowing 10 μs after supply voltage has reached 4.5 V for the output voltage to stabilize.

NOTICE

The magnetic field strength (Gauss) required to cause the switch to change state (operate and release) will be as specified in the magnetic characteristics (see Table 2). To test the switch against the specified limits, the switch must be placed in a uniform magnetic field.

Table 3. Absolute Maximum Specifications

Characteristic	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply voltage	V_S	—	-0.5	—	60.0	V
Output voltage	V_O	—	-0.5	—	60.0	V
Output current	I_O	—	—	—	N/A ¹	mA
Magnetic flux	B	—	—	—	no limit	Gauss

¹ Output short circuit protection is enabled when the output load current exceeds the rated load current shown in Table 1.

NOTICE

Absolute maximum ratings are the extreme limits the device will momentarily withstand without damage to the device. Electrical and mechanical characteristics are not guaranteed if the rated voltage and/or currents are exceeded, nor will the device necessarily operate at absolute maximum ratings.
