# TLE6258-2G LIN Transceiver

Automotive Power

Never stop thinking

Edition 2007-08-08 Published by Infineon Technologies AG 81726 Munich, Germany © 2004 Infineon Technologies AG All Rights Reserved.

#### Legal Disclaimer

The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics. With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation, warranties of non-infringement of intellectual property rights of any third party.

#### Information

For further information on technology, delivery terms and conditions and prices, please contact the nearest Infineon Technologies Office (www.infineon.com).

#### Warnings

Due to technical requirements, components may contain dangerous substances. For information on the types in question, please contact the nearest Infineon Technologies Office.

Infineon Technologies components may be used in life-support devices or systems only with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

TLE6258-2G

## LIN Transceiver

#### Features

- Single-wire transceiver, suitable for LIN protocol
- Compatible to LIN specification 1.2, 1.3 and 2.0
- Compatible to ISO 9141 functions
- Transmission rate up to 20 kBaud
- Very low current consumption in stand-by mode
- Wake-up from Bus
- Short circuit proof to ground and battery
- Overtemperature protection
- Green Product (RoHS compliant)
- AEC Qualified

#### Description

The single wire transceiver TLE6258-2G is a monolithic integrated circuit in a PG-DSO-8 package. It works as an interface between the protocol controller and the physical bus. The TLE6258-2G is especially suitable to drive the bus line in LIN systems in automotive and industrial applications. Further it can be used in standard ISO9141 systems.

In order to reduce the current consumption the TLE6258-2G offers a stand-by mode. A wake-up caused by a message on the bus sets the RxD output low until the device is switched to normal operation mode.

The IC is based on the Smart Power Technology SPT<sup>®</sup> which allows bipolar and CMOS control circuitry in accordance with DMOS power devices existing on the same monolithic circuit.

The TLE6258-2G is designed to withstand the severe conditions of automotive applications.

#### Table 1 Pin Definitions and Functions

Figure 2 Functional Block Diagram

#### **Application Information**

#### Figure 3 State Diagram

For fail safe reasons the TLE6258-2G has already a pull-up resistor of 30 k $\Omega$  implemented. To achieve the required timings for the dominant to recessive transition of the bus signal an additional external termination resistor of 1 k $\Omega$  is required. It is recommended to place this resistor in the master node. To avoid reverse currents from the bus line into the battery supply line in case of an unpowered node, it is recommended to place a diode in series to the external pull-up. For small systems (low bus capacitance) the EMC performance of the system is supported by an additional capacitor of at least 1 nF in the master node (see Figure 6).

In order to reduce the current consumption the TLE6258-2G offers a stand-by mode. This mode is selected by switching the Enable Not (ENN) input high (see **Figure 3**). In the stand-by mode a wake-up caused by a message on the bus is indicated by setting the RxD output low. When entering the normal mode this wake-up flag is reset and the RxD output is released to transmit the bus data.

## Package Outlines

#### Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).

You can find all of our packages, sorts of packing and others in our Infineon Internet Page "Products": http://www.infineon.com/products.
