Bias supply DC-DC KIT_6W_18V_P7_950V

Auxiliary supply solution featuring off-line SMPS current mode controller IC with 950 V CoolMOS™ P7 SJ MOSFET

Preimel Stefan (IFAT PMM ACDC AE CE)
Zechner Florian (IFAT PMM ACDC AE)

Description
KIT_6W_18V_P7_950V

Ordering code:
KIT_6W_18V_P7_950V

Board components

- CoolSET™ 5th gen. stand-alone controller (ICE5QSAG)
- 950 V CoolMOS™ P7 SJ MOSFET (IPU95R3K7P7)

Board specifications

- Input voltage: 90 V_{DC} - 440 V_{DC}
- Output voltage: 18 V_{DC} (prim. + sec. side)
- Output power max.: 6 W (prim. + sec. side)

Technical Parameter KIT_6W_18V_P7_950V

Summary of features

- Quasi-resonant flyback using a Infineon's fifth generation controller
- Snubberless operation to improve efficiency
- 950 V breakdown voltage allows operating off of higher input voltages
- Primary side regulated 18 V and a secondary side unregulated 18 V output

In power supplies that are used for server, telecom, and industrial applications there is typically a small bias power supply in addition to the main power converter. This 6 W bias board is designed to run in a system where it is continuously powered from the 400VDC output of a boost power factor correction (PFC) converter and provides power to the fan, gate drivers, and controller. This board uses the ICE5QSAG quasi-resonant (QR) flyback controller and the new 950 V CoolMOS™ P7 (IPU95R3K7P7). This 950 V breakdown voltage gives additional margin in the system to ensure the bias continues to run through surge events. This design was done as a snubberless flyback converter to further improve the efficiency over the entire load range.

Description	Value
Max. Efficiency [%]	85
Max. Efficiency [%] @ Output Current [A]	0.35
Max. Efficiency [%] @ Input Voltage [V]	400
Nom. Efficiency [%]	85
Efficiency @ 10% load [%]	50
Efficiency @ 50% load [%]	85
Efficiency @ 100% load [%]	85
Switching frequency min [kHz]	25
Switching frequency max [kHz]	60
Input Voltage Type	DC
Input Voltage min [V]	90
Input Voltage nom [V]	380
Input Voltage max [V]	440

Product features
KIT_6W_18V_P7_950V

ICE5QSAG

Description:

› Infineon latest 5th generation quasi-resonant flyback PWM controller offers high performance and comprehensive suite of protection to increase system robustness.

Summary of Features:

› Novel quasi-resonant switching scheme
› Rapid and adjustable start-up with cascode configuration
› 2 level selectable active burst mode level
› Built-in digital soft-start
› Cycle by cycle peak current limitation
› Digital frequency reduction with decreasing load for higher efficiency
› Adjustable line input over-voltage and brown IN/OUT protection
› V_{CC} and CS pin short to ground protection
› OLP, output short, output over-voltage, OTP with hysteresis and V_{CC} over/under voltage protection
› Auto-restart for all protection features

Benefits:

› High efficiency with latest CoolMOS™ P7 SJ MOSFET family and quasi-resonant switching scheme
› Auto-restart recovery scheme to minimize interruption to system operation
› Extensive protection coverage to increase system robustness
› Rapid start-up performance with cascode configuration

Product features
KIT_6W_18V_P7_950V

IPU95R3K7P7

Description:

› Designed to meet the growing consumer needs in the high voltage MOSFETs arena, the latest 950 V CoolMOS™ P7 technology focuses on the low-power SMPS market.

Summary of Features:

› Offering 50V more blocking voltage than its predecessor 900V CoolMOS™ C3, the 950V CoolMOS™ P7 series delivers outstanding performance in terms of efficiency, thermal behavior and ease-of-use. As the all other P7 family members, the 950V CoolMOS™ P7 series comes with an integrated Zener diode ESD protection. The integrated diode considerably improves ESD robustness, thus reducing ESD-related yield loss and reaching exceptional ease-of-use levels. CoolMOS™ P7 is developed with best-in-class VGS(th) of 3V and a narrow tolerance of only ± 0.5V, which makes it easy to drive and design-in.
