Description

The TLE4207G is a protected **Dual**-**H**alf-**B**ridge-**D**river designed specially for automotive and industrial motion control applications.

The part is built using the Infineon bipolar high voltage power technology DOPL.

The actuator (DC motor) can be connected direct between the halfbridges. Operation modes forward (cw), reverse (ccw), brake and high impedance are invoked from a standard interface. The standard enhanced power PG-DSO-14 package meets the application requirements and saves PCB-board space and costs.

Furthermore the built in features like diagnosis, over- and undervoltage-lockout, short-circuit-protection, over-temperature-protection and the very low quiescent current in stand-by mode will open a wide range of automotive and industrial applications.
