Board Connector

Cable Connector

Relay Connector

JAE has developed the CE2 Series (50Ω) connector for digital radio as an addition to the existing CE2 Series (75Ω) coaxial connector for automotive antenna applications.

Digital radio popularity is primarily in Europe and the United States, but the CE2 Series (50 Ω) can also be used for terrestrial digital television broadcast applications.

The CE2 Series is now available in three developed pin count variations: coaxial 1 position, coaxial 2 position, and coaxial 1 position with terminal 1 position.

Having equivalent performance with the existing CE2 Series and enhanced terminal pulling endurance and noise resistance, this product was made to satisfy a wide range of requirements.

Features

- Applicable frequency range is up to 1.5 GHz.
- Compact type available in three developed pin count variations. Board type has brackets for screw fixing to panel. (Not available for coaxial 2 position type.)
- Noise resistance enhanced by an outer terminal structure that covers entire cable core area.
- Meets the performance requirements for an automotive connector.
