NOTES

- 1. Suggestion for usage: For vibration usage or application, we suggest to add hysteresis for IC; if vibration is heavy, optical type of sensor switch is recommended.
- For the continued product improvement as one of the company policy, specifications
 may change or update without notice. The latest information can be obtained
 through our sales offices. Normally, all products are supplied under our standard
 conditions.
- 3. If buyer's products will stay in power supply for a long time which needs very high stability, optical sensor switch is strongly recommended.

PRECAUTIONS FOR USE

- If the products are intended to be used for other endurance equipment requiring higher safety and reliability such as life support system, space and aviation devices, disaster and safety system, it's necessary to make verification of conformity or contact us for the details before using.
- 2. Don't try to clean the switch with a solvent or similar substance after the soldering process.
- 3. Use water-soluble flux may damage the switch.
- 4. Please follow the soldering instruction accordingly, otherwise might lead to defective.
- 5. Do not use switch in the environment of high humidity, because such an environment may cause the leakage current between the terminals.
- 6. Please do not exceed the rated load as there will be a risk of disabling the product function.
- 7. In the circuit, switch should not be near or directly connected with the magnetic component solder joints (for example: relays, transformers, etc.).
