Ultra Low Profile 0404 Balun 50Ω to 100Ω Balanced

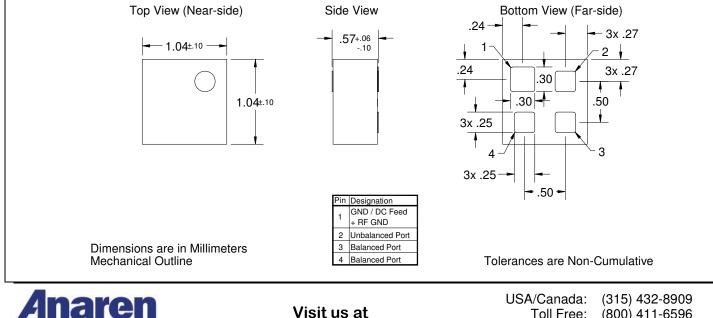

Description

The BD1416N50100AHF is a low profile sub-miniature unbalanced to balanced transformer designed for differential inputs and output locations on modern chipsets specifically in the GPS, GLONASS, WiMAX 1.5 (legacy TDM) and US DVB-H space and in an easy to use surface mount package. The BD1416N50100AHF is ideal for high volume manufacturing and delivers higher performance than traditional ceramic baluns. The BD1416N50100AHF has an unbalanced port impedance of 50 Ω and a 50 Ω balanced port impedance. This transformation enables single ended signals to be applied to differential ports on modern integrated chipsets. The output ports have equal amplitude (-3dB) with 180 degree phase differential. The BD1416N50100AHF is available on tape and reel for pick and place high volume manufacturing.

Detailed Electrical Specifications: Specifications subject to change without notice.

Features:		ROOM (25°C)			
• 1400 – 1600 MHz	Parameter	Min.	Тур.	Max	Unit
0.57 mm Height Profile	Frequency	1400		1600	MHz
• 50 Ohm to 2 x 50 Ohm	Unbalanced Port Impedance		50		Ω
Low Insertion Loss	Balanced Port Impedance		100		Ω
 Class Leading CMRR Targeted At GPS, GLONASS, 	Return Loss	14	18		dB
WIMAX 1.5 (legacy TDM) & US		14		0.0	
DVB-H Markets	Insertion Loss*		0.7	0.9	dB
Surface Mountable	Amplitude Balance		0.8	1.2	dB
Tape & Reel	Phase Balance		4	9	Degrees
Non-Conductive Top Surface	CMRR		26		dB
RoHS Compliant	Power Handling @85C			0.75	Watts
Halogen Free	Power Handling @105C			0.45	Watts
	Operating Temperature	-55		+105	°C

* Insertion Loss stated at room temperature (Insertion Loss is approximately 0.1 dB higher at +85 °C) Outline Drawing

Mounting Configuration:

In order for Xinger surface mount components to work optimally, the proper impedance transmission lines must be used to connect to the RF ports. If this condition is not satisfied, insertion loss, Isolation and VSWR may not meet published specifications.

All of the Xinger components are constructed from organic PTFE based composites which possess excellent electrical and mechanical stability. Xinger components are compliant to a variety of ROHS and Green standards and ready for Pb-free soldering processes. Pads are Gold plated with a Nickel barrier.

An example of the PCB footprint used in the testing of these parts is shown below. In specific designs, the transmission line widths need to be adjusted to the unique dielectric coefficients and thicknesses as well as varying pick and place equipment tolerances.

Packaging and Ordering Information

Parts are available in reel and are packaged per EIA 481-D. Parts are oriented in tape and reel as shown below. Minimum order quantities are 4000 per reel.
