Introduction to Knowles Precision Devices

Knowles Precision Devices is a premier global source for Capacitors, RF Filters, EMI Filters, Resonators, non-magnetic components and advanced dielectric materials.

An umbrella for the brands of Compex, DLI, Johanson MFG, Novacap, Syfer and Voltronics, Knowles Precision Devices serves a variety of markets including: military, aerospace/avionics, medical equipment, implantable devices, EMI and connector filtering, oil exploration, instrumentation, industrial electronics, automotive, telecoms and data networks.

Environmental & Physical Testing Procedures

Parameter	Method	MIL-STD-202 Condition
Thermal Shock	107	A, (modified), -55°C to +125°C.
Immersion	104	B
Moisture Resistance	106	-
Resistance to Solder Heat	210	C, 260°C for 20 seconds.
Life	108	A, 96 Hours @ +125°C.
Barometric Pressure	105	B
Shock, (Specified Pulse)	213	I, 100g's, 6ms.
Vibration, High Frequency	204	G, 30g's peak, 10Hz to 2kHz.

Parameter	Method	MIL-STD-202 Condition
Bond Strength	2011	D, 3 grams minimum with .001" dia wire
Die Shear Strength	2019	Limit per MIL-STD-883, Figure 2019-4.
Temperature Cycling	1010	C
Mechanical Shock	2002	B,Y1,
Constant Acceleration	2001	3,000g's, Y1 direction

SLC - Packaging

SLC Waffle Packaging

DLI offers a wide variety of standard design waffle packs in various materials depending on the application. Typical material offerings are antistatic and gel pack, which can contain up to 400 pieces depending on component dimension. Custom waffle packs are available; please consult the factory for details.

SLC Tape and Reel

DLI offers tape and reel packaging solutions for a variety of our single layer capacitor case sizes. Utilizing the latest technology and equipment to provide our customers the highest quality products, our standard SMD tape and reel packaging meets or exceeds EIA standards. Custom tape and reel packaging available; consult the factory for options.

SLC on Tape Ring

DLI offers single layer capacitors re-populated on blue membrane tape and photon ring assembly to maximize efficiency and minimize product cost. Used in high volume applications, the re-populated capacitors provide for more efficient component placement and fewer “pick and place” machine change outs. The re-populated capacitors meet GMV capacitance value, are 100% visually acceptable and can be re-populated in custom shapes and sizes on a 6 inch photon tape ring.

SLC “Black Dotted” on Tape Ring

DLI offers “black dotted” capacitors on membrane tape and photon ring assembly. For high volume applications utilizing visual recognition, a less expensive alternative is the use of “black dotted” capacitors provided on saw dice membrane tape. The non- “black dotted” capacitors meet GMV capacitance value and a minimum of 75% visually acceptable product is guaranteed.

Storage

Single layer capacitors with applicable terminations will be solderable for a minimum of 1 year from date of shipment if properly stored in their original packaging. For extended periods, storage in a dry nitrogen environment is recommended. Product supplied on membrane tape and photon ring should be stored in the original container and in an environmentally controlled area where temperature and humidity are maintained. It is recommended not to store the product in direct light as this can negatively impact the adhesion properties of the tape.

Handling

Single layer ceramic capacitors should be handled carefully during component transfer or placement, preventing damage to the gold and ceramic surfaces. The capacitors should be handled with precision stainless steel tweezers or a vacuum wand. Contacting the capacitor with bare hands should be avoided as resulting contaminants will affect the performance of the component.

SLC Waffle Packaging

SLC Tape and Reel

SLC on Tape Ring

SLC - V Series

Description

Class II dielectric material with X7R characteristics for DC Blocking or RF Bypass applications in a broad frequency range.

These high frequency, wire bondable single layer capacitors are perfect for GaN and GaAs amplifier applications where small size and microwave performance is key to a well performing circuit.

- X7R Temperature Stability
- Excellent high frequency response
- Wire Bondable
- RoHS compliant
- High capacitance in a small footprint
- MSL-1
- Rated Operating/Storage Temp. -55 to +125°C

Functional Applications

- DC Blocking
- RF Bypassing
- Filtering
- Tuning and Coupling

Part Number	Capacitance	Voltage	Dissipation Factor @ 1MHz	Insulation Resistance

Performance Characteristics - V Series Capacitors

Attachment Method - V Series Capacitors

Recommended Attachment Method (Conductive Epoxy)

Alternative Attachment Method (Gold Eutectic)

Bonding can be done with either needle or automatic dispensers.

Epoxy curing defer to the epoxy manufacturer's preferred schedule but typically in the 125°C to 150°C range.

Benefits of epoxy is easier repairs, cure need not be started immediately so multiple substrates may be processed at one time and epoxy is effective in higher frequencies.

Description

SLC with recessed metallization, available with borders on one or both sides.

Recessed metallization have been designed to minimize the potential of shorting during attachment (epoxy or solder).

- Available from 0.03pF to 2400pF
- Operating frequency up to 100GHz
- Wire Bondable
- 25, 50 and 100 Volt options
- Customized designs are available, please contact sales office

Description

High Performance Single Layer Capacitors for RF, Microwave and Millimeter Wave Applications.

- Wire Bondable:
100μ” Au with a Ni Barrier Layer
- Customized solutions available, please contact sales office

Functional Applications

- DC Blocking
- RF Bypassing
- Filtering
- Tuning
- Insulation
- Submounts
- Stand-Offs

Benefits

- Dimensional consistency
- Gold metallization for wire bonding
- Rugged construction

Test Level Codes

Commercial Level

Description

High Performance Single Layer Capacitors for RF, Microwave and Millimeter Wave Applications.

- Available from 0.03pF to 10,000pF
- Operating frequency up to 100GHz
- Wire Bondable:
- Customized solutions are available, please contact sales office

Functional Applications

- DC Blocking
- RF Bypassing
- Filtering
- Tuning and Coupling

Benefits

- ESD Proof
- Gold metallization for wire bonding
- Rugged construction

Description

Multiple Decoupling/Blocking Capacitors in a Single Array.

- Operating frequency up to 30GHz
- Wire Bondable:
- Customized solutions are available, please contact sales office

Functional Applications

- DC Blocking
- RF Bypassing
- Decoupling
- GaAs ICs

Benefits

- Single insertion reduces complexity and cost
- Gold metallization for wire bonding
- Reduce bond wires for improved performance

Series Configured Capacitor for Microwave Applications.
Recessed metallization has been designed to minimize the potential of shorting during attachment (epoxy or solder).

- Available from 0.2pF to 800pF
- Operating frequency up to 30GHz
- Customized solutions

Functional Applications

- DC Blocking
- RF Bypassing
- Filtering
- Tuning
- Coupling

Benefits

- Eliminates wire-bonding
- Coplanar waveguide
- Low insertion loss

Binary Tunable Caps for Single-Layer Hybrids.

Functional Applications

- Matching Networks
- Tank Circuits
- Tuning
- Coupling

Benefits

- Small size compatible with microwave geometries
- Hybrid Circuits - Engineering designs
- Operating frequency up to 30GHz
- Customized solutions

Circuit Diagram - Bi-Cap®

Complex utilizes an extensive variety of materials in both Class I and Class II categories with dielectric constants ranging from 3.8 to 35,000 to fabricate our components. Other dielectric materials are available; please consult the Sales office.

Class I Dielectric Materials:

This class of dielectrics consists of material exhibiting very low losses, extremely low or closely controlled temperature coefficients, negligible voltage and frequency coefficients, negligible aging effects and high insulation and dielectric breakdown.

Class I Dielectric Materials

Type	Ins. Res (MEG-OHMS 100VDC @ 25°C)	Temperature Coefficient PPM°C -25 to 125°C	Dissipation Factor (@ 10GHz)	Dielectric Constant (K)	Material
C-20	10 ⁸	Negligible	0.0001	3.8	Quartz
C-20	10 ⁸	Negligible	0.0001	3.9 (SiO2)	Si
C-25	10 ⁸	Negligible	0.0001	6.6	BeO
C-28	10 ⁸	P120 ±25	0.0001	8.7	AlN
C-30	10 ⁸	P180 ±50	0.0006	9.6	Alumina 96
C-35	10 ⁸	P180 ±50	0.0006	9.8	Alumina 99.6
C-37	10 ⁸	NPO 0±30	0.0001	12.6	Titanate
C-40	10 ⁸	0 ±30	0.0010	20	Titanate
C-50	10 ⁸	0 ±30	0.0020	40	Titanate
C-55	10 ⁸	0 ±30	0.0050	50	Titanate
C-58	10 ⁸	0 ±30	0.0050	84	Titanate
C-70	10 ⁸	N1500 0±30	0.0025	150	Titanate

*Typically used for submounts and substrates only.

Class II Dielectric Materials:

This class of material is characterized by high dielectric constants, increased losses, and higher temperature coefficients. These properties are inherent with this class of material but the high dielectric constants permit the use of smaller size to achieve low series inductance and meet dimensional requirements. Capacitors made with these materials are often used for coupling of microstrip line circuits where the small chip size is necessary. Used as bypass capacitors, the small size provides low series inductance and dielectric losses are typically of little concern.

Class II Dielectric Materials

Type	Ins. Res (MEG-OHMS 100VDC @ 25°C)	Temperature Coefficient (%) -55 to 125°C	Dissipation Factor (@ 1MHz)	Aging (%) HR/Decade	Dielectric Constant (K)
C-80	10 ⁵	5 to -10	0.010	2.0	300
C-90	10 ⁵	10 to -10	0.015	3.0	1,100
C-100	10 ⁵	3 to -10	0.015	3.5	2,200
C-120	10 ⁵	0 to -35	0.020	3.0	4,000
C-130	10 ⁵	0 to -60	0.025	3.0	5,000
C-140	10 ⁵	0 to -80	0.025	3.0	11,000
C-200	*	15 to -15	0.035	3.0	25,000
C-400	*	15 to -15	0.035	3.0	35,000

* Please consult the factory for specific ratings to meet your application requirements.

New Material

C-400: Ultra High K X7R material.
Capacitance change ±15% from -55 to 125°C.
200pF in a 10 x 10 size.
1,000pF in a 25 x 25 size.

Substrates can be supplied as follows:

- **Bare**
- **Metallized**
 - gold over platinum, palladium, or nickel
 - silver over platinum
 - custom schemes and patterns to customer specifications
- **Thickness range:**
3 mils and up
- **Length and Width:**
up to 4" depending on material

Standard Electrode Metallizations

Gold (G): This metallization consists of a minimum of 70 micro-inches of gold over non-magnetic leach-resistant nickel or platinum which is ideal for all wirebonding methodologies. Please consult our factory for optimum metallization options for solder applications.

Silver (S): This metallization consists of 20 micro-inches of silver over platinum which is ideal for all solder applications whenever the use of gold is unacceptable.

This classic two-electrode design is the simplest and most widely used.

The chip size, shape, and electrical properties may be determined from the dielectric material data and the CSA Selection Chart. Compex is the leader in supplying the LC filter market with custom value parallel plate capacitors. We manufacture tight tolerance, custom filter capacitors to the required size, shape, and value for minimization of post-build tuning requirements. Thicknesses of up to 25+ mils are available utilizing temperature-stable low-loss materials and special terminations to improve the all solder process.

Description

- Capacitance: 0.04 to 10,000 picofarads and beyond
- Square or rectangle, length or width .005" and up

CSA Standard Capacitance Tolerance Codes

Class I Dielectrics: C-20 thru C-70				Class II Dielectrics: C-80 thru C-400			
Tolerance	Code	Tolerance	Code	Tolerance	Code	Tolerance	Code
±.50pF	D	±20%	M	-20% thru +80%	Z	±20%	M
±.25pF	C	±15%	L	-10% thru +40%	Y	±15%	L
±.10pF	B	±10%	K	-0% thru +100%	V	±10%	K
±.05pF	A	±5%	J	Guaranteed Min. Value	GMV	±5%	J
±.01pF	P	±3%	H				
		±2%	G				

CSA Chip Dimensions

To determine rectangular chip dimensions, divide the total chip area by the required length or width to obtain the remaining dimension.

CSA Standard Dimensional Tolerances

Material	L or W Dimension	Tolerance
C-20 through C-140	< 20 mils	±15%
	≥ 20 mils	±10%
C-200 and C-400	≤ 15 mils	±2 mils
	>15 mils; ≤ 30 mils	±3 mils
	> 30 mils	±5 mils

CSA Electrode Configuration

Two electrodes

Ordering information - CSA Series - Edge-to-Edge Capacitors

CSA	200	10 x 10	x 6	G	101	M
Cap Style	Dielectric Type	Length x Width (mils)	Thickness (mils)	Metallization	Capacitance (pF)	Capacitance Tolerance
	See Class I and Class II tables (page 22)	See CSA Chip Dimensions (at right)	See CSA Selection Chart (at right)	G = Gold S = Silver Custom	First two digits represent significant figures and the last, the number of zeros to follow. When required, the letter "R" is used as a decimal point and the succeeding digits represent significant figures only. e.g.: 101 = 100pF, 1R6 = 1.6pF	See CSA Standard Capacitance Tolerance Codes (below)

Note: Standard dimensional tolerance for length and width is ±15% up to 20 mils. For dimensions greater than 20 mils, standard tolerance is ±10%. For C-200 and C-400 material, see table on right. In cases where dimensions cannot be exceeded, insert "M" to signify a Maximum dimension. The thickness tolerance is ±1.5 mils.

Example shown: Compex Series CSM, dielectric type C-90, .010" x .010" x .005", gold, 2.7pF, ±20% tolerance

Please contact factory to request free samples.

CSA Series - Edge-to-Edge Capacitors

CSA Selection Chart

Note: Selection Chart is for guidance only. All Compex parts are built to specific customer requirements.

CSM Series - Margin Capacitors

Margin caps have the topside electrode withdrawn from the edges in order to increase the distance between electrodes and dramatically decrease the possibilities of shorting when epoxy die-mounting. This style is also widely used for optical recognition-based assembly.

Increased margin sizes and special terminations are available for high power LC filter applications.

Description

- Margin capacitors can be customized to any sized square or rectangle

CSM Standard Capacitance Tolerance Codes

Class I Dielectrics: C-20 thru C-70				Class II Dielectrics: C-80 thru C-400			
Tolerance	Code	Tolerance	Code	Tolerance	Code	Tolerance	Code

CSB Series - Dual-Pad Capacitors

A single full electrode is provided on one side of the capacitor and split electrodes on the other side. This is a three-terminal capacitor which can be used as two capacitors with a common electrode, or as serially connected capacitors so that connections may be made on one side of the chip only (surface-mount). This design is often used in microstrip coupling to eliminate lead inductance and raise the self resonance frequency.

Description

- Capacitance: 0.06 picofarads and up
- Chip shapes: dual Pads with gap
- Gap widths: 5, 10, 15, 20 mil or custom

CSB Standard Capacitance Tolerance Codes

Class I Dielectrics: C-20 thru C-70		Class II Dielectrics: C-80 thru C-200			
Tolerance	Code	Tolerance	Code	Tolerance	Code
±20%	M	-10% thru +40%	Y	±20%	M
±15%	L	-20% thru +80%	Z	±15%	L
±10%	K	-0% thru +100%	V	±10%	K
±5%	J	Guaranteed Min. Value	GMV		

CSB Electrode Configuration

Split electrodes

This component functions as two capacitors operating in series, each of which is twice the desired equivalent capacitance. Allow us to custom design for your application.

CR/CM Series - Row Capacitors

Row Capacitors are used where arrays of capacitors (not necessarily identical) are needed, usually for decoupling/ bypass of GaAs integrated circuits. Standard arrays can contain up to 10 capacitors from 0.04pF on up. Typical overall dimensions range from 20 x 10 mils on up. Parts can be fully customized to meet the requirements of your application to provide the shortest lead length possible.

Description

Row caps (CR) are also available with margins (CM) surrounding the edges to help prevent epoxy shorts and aid optical recognition systems.

SLC - Heatsinks, Standoffs & Submounts

Heatsinks

- Heatsinks are fully metallized on all sides and are used to dissipate and absorb heat
- Heatsinks allow for high thermal conductivity and are electrically conductive (DC short)
- Typically used with LED's or laser diodes

Standoffs

- A Standoff is much like a Heatsink however it is typically metallized on only the top and bottom surfaces
- Each device is custom tailored to the customer's specifications and is typically used with LED's or Photo Diodes (works as a photo detector, light is allowed in through fibers)

Submounts

- Submounts are ceramic LED package bases which minimize thermal resistance between LED junctions and adjacent components
- By reducing junction temperatures, an LED will produce increased efficiency, brightness, color and reliability
- Each device is custom tailored to the customer's specifications

Material Specifications

Material Code	Relative ϵ_r^* @ 5 GHz	TCC+Loss ppm/°C	Coefficient of Tangent* % Max	Thermal Thermal Expansion ppm/°K	Conductivity W/m-°K

SBT Series - Submounts

Submount materials include quartz, alumina, aluminum nitride, kovar and beryllium oxide.

Applications include: heat sinks, standoffs, height matching, bonding pads, and jumpers.

Custom sizes, patterns and shapes available to your design specifications in thicknesses from 3 to 100 mils and beyond.

Submount Material Properties Chart

	Quartz	Alumina	AlN	Kovar	BeO	Si
Compex Material Code	C-20	C-30/35	C-28	KVR	C-25	C-22
Coefficient of Thermal Expansion (ppm/°C)	6	6.7	4.6	5.86	7.5	0.56
Thermal Conductivity (W/m-K)	1.6	26	170	17.3	270	1.38 (SiO ₂)

Ordering information - SBT Series - Submounts

SBT	28	20 x 20	x 6	G	S	5
Cap Style	Material	Length x Width (mils)	Thickness (mils)	Metallization	Cut to Size	Thickness Tolerance
SBT = Edge-to-edge plated or bare CSX = Custom patterned	See Submount Material Properties Chart above		3 to +100 mils	G = Gold B = Bare Custom		(only utilized if <.001"; figure represents tenths of a mil)

Note: Standard dimensional tolerance is .001" for length, width, and thickness. Tighter Thickness tolerances down to .0002" are available.
Example: Compex Series SBT, dielectric type C-28, .020" x .020" x .006", gold, cut to size, .0005" thickness tolerance

Kits available for design development

Please contact factory to request free samples.

MST Series - Mounting Shorts

Alumina mounting shorts (or Aluminum Nitride for improved thermal properties), with metallization on the top, bottom and two of four sides, allow placement of a wirebond anywhere in the circuit, replacing the need for gold terminations on the substrate. They also can be used to raise the ground plane, reducing lead length for reduced inductance for high-speed/frequency applications, or to dissipate heat from under an IC or laser chip.

Description

- Instant bonding pads
- Fully conductive
- Height matching
- Replaces moly-tabs
- Any size available, as small as .003" X .003"

MST Chip Dimensions

Dimensional Tolerance: Standard is .001" for length, width and thickness. Tighter tolerances down to .0003" are available for thickness .0005" and greater.
For <.0005" consult factory for available tolerances.

Wirebond

Raised Plane

Our ceramic mounting shorts are excellent replacements for kovar and moly-tabs. These ceramic shorts have a much sharper edge and are flat stable bases for mounting semiconductors.

Cap Style	Material	Length (mils)	Width (unmetallized side) (mils)	Thickness (mils)	Metallization	Cut to Size	Thickness Tolerance
				3 to +100 mils	G = Gold Custom		(only utilized if <.001"; figure represents tenths of a mil)

Example Shown: Compex Series MST, dielectric type C-30, .025" x .020" x .006", gold, cut to size, .0005" thickness tolerance

Kits available for design development

Milli-Cap® - Ideal SMT Capacitor

Features

- 0201, 0402 and 0602 footprints
- Low Loss High Q part
- Very Low Series Inductance
- Ultra High Series Resonance
- Matches typical 50Ω line widths
- Behaves like an Ideal Capacitor
- Single piece construction
- Orientation insensitive

Functional Applications

- Test Equipment, Photonics, SONET, TOSA/ROSA, High Speed Data
- Broadband Microwave/Millimeter Wave
- Transimpedance Amplifiers

Specification - Milli-Cap®

Electrical	
Temperature Coefficient of Capacitance	Values as per electrical characteristics table
Milli-Cap® Metallization	7.5μ" Au over 50μ" Ni
Capacitance Range	0.5pF to 82pF
Maximum Assembly Process Temperature	250°C

Attachment methods - Milli-Cap®

Recommended attachment to soft or hard substrate using Conductive Epoxy

- Place a single drop of conductive epoxy onto each micro strip as illustrated; the edge of the epoxy shall be at least .003"-.004" back from the edge of the trace to prevent filling the gap with epoxy.
- Centering the termination gap of the capacitor within the gap in the micro strip, press with careful, even pressure onto the micro strip ensuring the terminations make good contact with the epoxy drops.
- Cure according to the epoxy manufacturer's preferred schedule, typically 125°C to 150°C max.
- After curing, inspect joint for epoxy shorts across the termination and micro strip gaps that would cause a short across the cap.

Isopropanol and Methanol are both safe to use to pre clean Milli-Caps®. Isopropanol, and Methanol are not to be used after mounting with conductive epoxy as they act as a solvent!

Recommended attachment to soft or hard substrate using Solder

- Place a single drop of solder paste onto each micro strip as illustrated; the edge of the solder shall be at least .001"-.002" back from the edge of the trace to prevent filling the gap with solder.
- Centering the termination gap of the capacitor within the gap in the micro strip, press with careful, even pressure onto the micro strip ensuring the terminations make good contact with the drops of solder paste.

- Reflow according to the solder manufacturer's preferred profile, ensuring the reflow temperature does not exceed 250°C.
- After the reflow step is completed, inspect joint for voids or excess flux and non-reflowed solder balls that can degrade performance or cause shorts across the gaps. Proper cleaning after the reflow process is crucial to avoiding performance degradation and discovering poor solder joints.

Isopropanol and Methanol are both safe to use with soldered Milli-Caps®.

Opti-Cap® - Ultra Broadband DC Blocking

Features

- X7R temperature and voltage stability
- Resonance free DC blocking to >40GHz
- SMT by solder or epoxy bonding
- Low frequency stability over temperature
- Very low series inductance
- 0201, 0402 and 0602 footprints

Functional Applications

- Test Equipment, Photonics, SONET, TOSA/ROSA, High Speed Data
- Broadband Microwave/Millimeter Wave
- Transimpedance Amplifiers

Benefits

- Eliminates wire-bonding
- Coplanar waveguide
- Low insertion loss

Specification

Electrical	
Temperature Coefficient of Capacitance	X5R: -55°C to +85°C (TCC ± 15%) X7R: -55°C to +125°C (TCC ± 15%)
Capacitance Range	1.5nF to 220nF
Maximum Assembly Process Temperature	250°C

Insertion Loss

Attachment methods - Opti-Cap®

Recommended attachment to soft or hard substrate using Conductive Epoxy

1. Place a single drop of conductive epoxy onto each micro strip as illustrated; the edge of the epoxy shall be at least .003"-.004" back from the edge of the trace to prevent filling the gap with epoxy.
2. Centering the termination gap of the capacitor within the gap in the micro strip, press with careful, even pressure onto the micro strip ensuring the terminations make good contact with the epoxy drops.
3. Cure according to the epoxy manufacturer's preferred schedule, typically 125°C to 150°C max.
4. After curing, inspect joint for epoxy shorts across the termination and micro strip gaps that would cause a short across the cap.

Isopropanol and Methanol are both safe to use to pre clean Opti-Caps®.

Isopropanol, and Methanol are not to be used after mounting with conductive epoxy as they act as a solvent!

Recommended attachment to soft or hard substrate using Solder

1. Place a single drop of solder paste onto each micro strip as illustrated; the edge of the solder shall be at least .001"-.002" back from the edge of the trace to prevent filling the gap with solder.
2. Centering the termination gap of the capacitor within the gap in the micro strip, press with careful, even pressure onto the micro strip ensuring the terminations make good contact with the drops of solder paste.

3. Reflow according to the solder manufacturer's preferred profile, ensuring the reflow temperature does not exceed 250°C.
4. After the reflow step is completed, inspect joint for voids or excess flux and non-reflowed solder balls that can degrade performance or cause shorts across the gaps.

Proper cleaning after the reflow process is crucial to avoiding performance degradation and discovering poor solder joints.

Isopropanol and Methanol are both safe to use with soldered Opti-Caps®.

Features

- X7R temperature and voltage stability
- Low frequency Stability
- Low insertion Loss
- Solder or Epoxy attachment

Functional Applications

- Broadband Microwave/Millimeter Wave
- Test Equipment
- ROSA/TOSA
- SONET

PX Series - Broadband Blocking Device

Dimensions - PX Series Broadband Blocking Device

Attachment Method - PX Series - Broadband Blocking Device

Recommended attachment to soft or hard substrate using Solder:
Recommended Micro Strip Layout:

- 1. Place a single drop of solder paste onto each micro-strip as illustrated; the edge of the solder shall be at least .001"-.002" back from the edge of the trace to prevent filling the gap with solder.
- 2. Centering the termination gap of the capacitor within the gap in the micro strip, press with careful, even pressure onto the micro strip ensuring the terminations make good contact with the drops of solder paste.
- 3. Reflow according to the solder manufacturer's preferred profile, ensuring the reflow temperature does not exceed 260°C.
- 4. After the reflow step is completed, inspect joint for voids or excess flux and non-reflowed solder balls that can degrade performance or cause shorts across the gaps. Proper cleaning after the reflow process is crucial to avoiding performance degradation and discovering poor solder joints.

Isopropanol and Methanol are both safe to use with soldered units.

Mounting:

The part is designed for surface mounting using conventional reflow soldering techniques. In accordance with normal recommendations for ceramic MLCC's, hand soldering should be avoided as soldering irons could cause thermal damage or disconnections within the device. If rework or manual placing is necessary, then the use of a hot air pencil is recommended. Preheating the board can assist with manual soldering. Pb free compatible.

MLC - Broadband Blocks

Description

- Resonance free DC Blocking / Decoupling
- Less than 0.25 db loss @ 4 GHz (typical)
- Surface mountable

Functional Applications

- Fiber Optic Links • High Isolation Decoupling
- LAN's, VCO Frequency Stabilization • Diplexers
- RF/Microwave Modules • Instruments • Test Equipments

Performance

The information above represents typical device performance.

Series Description

DLI's Gain Equalizers are designed as a small, low cost solution to your gain slope challenges. These equalizer designs employ a monolithic construction with precision thin-film conductor and resistor films with proprietary high dielectric constant ceramics for superior RF performance and repeatability. Components are well suited for use with pick and place equipment.

Available in tape and reel packaging for high volume applications.

Applications

- Broadband Microwave Modules; EW, ECM, ECCM
- Equalizer is utilized as a compensation circuit to correct for a loss slope created by other elements within a circuit such as in amplifier stages

Benefits

- Low Excess Insertion Loss
- Footprint interchangeable part series, gain slopes from 1 to 3.5 dB
- Superior, repeatable microwave performance

- Ease of assembly; terminations are compatible with solder SMT and conductive epoxy assembly
- Package optimized for typical 50 Ω transmission line width
- No ground connection required

Part Number		L	W	T	Lp	Wp	G	Nominal Slope

All dimensions in mils. Mechanical outline drawings for equalizers listed above are available. Please contact DLI Applications Engineering for details.

Physical Dimensions

Equivalent Schematic Representation

Typical Performance

Die Attach Recommendations

- 1) Equalizer width should be approximately as wide as 50 Ω line trace on PCB.
- 2) The gap in the microstrip line should be nominally equal to dimension G.
- 3) Vacuum pick-up tool recommended for component handling. If pressure is to be applied during component placement, it should be done uniformly across the part.
- 4) Thin, unmounted circuit boards are prone to warpage during reflow. This can cause solder attach defects and cracking of components during handling or subsequent housing installation.

Custom Solutions

We realize that our standard offerings won't meet all customer requirements. DLI offers custom solutions with quick turn time. Custom designs will be tailored to meet your system requirements by utilizing a design with one of our high K materials. Temperature performance requirement? We can design on one of DLI's temperature stable materials. Please contact Applications Engineering for more information.

Design Kits

Two design kits are available for quick fix or circuit tuning needs. Each kit has 5 pieces of the variant equalizer. Standard Series includes: AEQ2050, AEQ2199, AEQ2234, AEQ3042 and AEQ3055. EW Series includes: AEQ05467, AEQ05468, AEQ05469, AEQ05470, AEQ05471 and AEQ05472.

Qualifications

Miniature RF Blocking Network

Description

For RF Noise Suppression in high speed mixed signal semiconductor devices

- Eliminates Noise at I/O Pins
- Replaces Large Decoupling Capacitor
- with Superior Performance
- Clean DC Lines Beyond 18 GHz

Functional Applications

- High Speed Digital • Mixed Signal IC's
- Suppression of Noise on DC Supply Lines
- MCM and Hybrid Modules
- X7R Temperature and Voltage Stability

Layout and Dimensions

Material and Electrical Characteristics

Material Code	Capacitance (typical)	Resistance (pad to pad)	DF	TCC	Rated Voltage
BL	30 pF	10Ω Nom.	3.0% Max.	X7R	25 Vdc
BJ	45 pF	10Ω Nom.	3.0% Max.	X7R	25 Vdc

Miniature RF Blocking Network

Metallization:

Top: 50Ω/Square TaN, 300Å TiW, 100μ Inch minimum Au.

Bottom: 300Å TiW, 100μ Inch minimum Au.

Screening Options

Test Code	Test/Inspection	Sample Size	Description
X	Bond Strength	2 Pcs/Plate	2 bonding pads on each sample
	IR	1% AQL	21/2 times rated voltage of 25 volts
	Visual Inspection	100%	4 Side visual screening
	Pad to pad resistance check	1% AQL	Ensure isolation between segments and boarder

Performance

Segment Bonding for Measurement

Typical Application

Note: For additional data of multi-segment devices please contact the Sales office.

Self Bias Network

Description

- Wireless communication modules
- MIC broadband high gain RF/Microwave module
- Bias line voltage divider and integrated decoupling capacitor
- Simplifies assembly with 1 component
- Improves gain flatness and stability in GaAs FET
- Miniature size: .020 x .034 (.5mm x .86mm)

Physical Characteristics

Equivalent Schematic Representation

- Resistor Values:**
R1 - 200Ω
R2 - 100Ω
R3 - 50Ω
R4 - 20Ω
- Nominal Capacitance:**
50pF

Typical application requires 2 networks

Recommended Mounting: The Self Bias Network should be mounted with fully metallized side down directly on the RF ground plane for best performance.

Ordering information - Self Bias Network

Product	Width (mils)	Material	Network Type
B = Bias Network	28	BL ±25% TC	

Physical Characteristics

Typical Application

Note: Custom Networks can be designed per customer specification. Please consult factory for additional information or special requirements.

Bias Filter Network

Description

- Wireless communication modules
 - Ideal varactor decoupling element
 - High gain RF/Microwave modules
 - Ideal GaAs FET gate biasing device
 - MMIC multichip modules
- Functional Applications**
- Filters noise and RF from supplies
 - Reduces RF feedback through bias supplies
 - Simplifies assembly - one component replaces many
 - Designed with large 4 mil wirebond pads for assembly ease

Equivalent Schematic Representation

Total Series Resistance:
DC Rating: Volts Max: 50V

Total Shunt Capacitance:
I(ma) Max: 10Ma

Recommended Mounting: The Bias Filter Network should be mounted with fully metallized side down directly on RF ground plane for maximum isolation performance.

Physical Characteristics

Typical Application
