- High Noise Immunity: Control circuit can not be triggered by output switching noise.
- 14-pin DIP package

**DESCRIPTION**

These miniature solid-state relays utilize a photovoltaic generator driving high performance power FET chips to provide low output on-resistance and high output switching capability. The series includes DC switching versions with output current ratings up to 1.75 amp, and bi-directional versions to switch AC or DC up to 1.0 amp. Output voltage ratings of both types range from 50 to 360 volts. The virtual elimination of offset voltage makes them ideal for low level switching applications as well. Input and output are optically isolated to protect input logic circuits from output voltage transients.

C47 is the same configuration except Q<sub>2</sub> has been replaced with a wire short

### NOTES:

1. For control voltages above 6 volts a series resistor is required. Use standard value selected from Figure 2.
2. Surge current duty cycle 10% maximum. Surge duration not to exceed 1 second.
3. To calculate output On-Resistance for junction temperatures other than  $25^{\circ}\text{C}$  use the following equation:

$$R_T = R_{25} e^{0.006 \times \Delta T} \quad \text{where } R_{25} = \text{Resistance at } 25^{\circ}\text{C}$$

$R_T$  = Resistance at elevated temperature  
 $\Delta T$  = Elevated temperature -  $25^{\circ}\text{C}$

Loads may be connected  
in either output terminal
