Mercury™ T2C & T2P
USB 2.0 Type-C™
Power Delivery Protocol Analyzer

Key Features

• Supports USB Power Delivery 2.0 and 3.0
  Captures all CC and PD events and displays them in the easy-to-understand CATC Trace view

• Supports USB 2.0
  Capable of capturing all USB 2.0 speeds (LS, FS, HS) over Type-A, B, & C devices

• Portable and Affordable
  Compact bus-powered system weighs under 8 oz.

• 256/512 MB Recording Memory
  Extend capture time with spool-to-disk recording (512 MB for T2P)

• High Impedance probe
  Non-intrusive probe preserves real world signal and timing conditions

• Advanced Triggering
  Isolates important traffic, specific errors or patterns

• Extensive Decodes
  Mass storage, Bluetooth HCI, Hub, PTP, Still Image, Printer, Human Interface Device (HID), Audio, Video, Communication and more

• Hardware Filtering
  Automatically exclude non-essential traffic

• Event Reporting
  Quickly identify and track error rates, abnormal bus activity or timing conditions

• Power Tracker™
  VBUS, VCONN, & CC power analysis (T2P only)

• SBU Capture Option
  Mercury T2P can decode SBU back-channel messages for Thunderbolt-3™ (LSTX) and DisplayPort™ (AUX)

The Teledyne LeCroy Mercury T2C and T2P add USB Type-C and Power Delivery 3.0 support to the industry’s smallest and most affordable hardware-based USB 2.0 protocol analyzers. The Mercury combines the de-facto standard CATC Trace™ display, USB class decoding and Power Delivery 3.0 support in an analyzer that fits in a shirt pocket.

View and Understand USB Protocol

Featuring the industry-leading CATC Trace™ expert analysis software, the Mercury system provides an easy-to-use display that graphically decodes Power Delivery 3.0 protocol, in addition to USB 2.0 protocol traffic. With the Standard or Advanced edition, all protocol layers can be expanded to show the underlying transactions and packets. Tooltips help explain protocol events making it easier for non-experts to identify errors.

Real Time Triggering

Isolating specific protocol events with real time triggering is essential to capturing intermittent problems. The Mercury system provides sophisticated triggering with drag-and-drop selections for PID type, data patterns, standard requests, errors and bus events. The Mercury features up to 512 MB of on-board memory and supports spool-to-disk capture for extended recording.

USB Power Delivery Support

The Mercury system supports USB Type-C and BMC Power Delivery 3.0 with capture and decode of all Power Delivery packets. View all PD negotiations over the CC wire including VDM’s, role swaps, and entry/exit from alternate modes. The Mercury T2P provides all the PD support plus Power Tracker for vBUS & vCONN analysis and 512MB recording memory.

Find the Issues Fast

The Mercury system provides many mechanisms to measure and report on USB traffic. The Bus Utilization display shows data, packet length and bus usage by device. Using the Traffic Summary window, users can evaluate statistical reports at a glance or navigate to individual fields. Real time statistics show throughput by endpoint.
Specifications

Host Requirements
Microsoft® Windows 7, Windows 8.1 or Windows 10

Standard Trigger Events
Packet Identifier, Token Pattern, Frame Pattern, Device Request, Data Pattern, Bus Conditions, Errors, Transactions, Data Length, Splits, PD Messages, Type-C logical states

Reporting & Statistics
Packet Level, Transaction Level, Transfer Level, Error Reports

Recording Memory Size
Mercury T2C: 256 MB
Mercury T2P: 512 MB

Power Consumption
Idle: 460 mA (typical); Active: 500 mA (typical) (Note: assumes Vconn current required is < 50 uA)

Connectors
USB Type-C

USB Real-time Statistics (RTS)

Export to .CSV (Packet Layer)

Power Tracker

DisplayPort™ AUX capture (SBU)

Thunderbolt-3™ (LSTX) Decoding
