

T3AFG200/T3AFG350/T3AFG500 Data Sheet

Function/Arbitrary Waveform Generators

Debug with Confidence 200 MHz – 500 MHz

Teledyne Test Tools T3AFG200 / T3AFG350 / T3AFG500 range of function/arbitrary generators are a series of dual-channel waveform generators with specifications of up to 500 MHz maximum bandwidth, 2.4 GSa/s maximum sampling rate and 16-bit vertical resolution. The proprietary Arbitrary & Pulse techniques used in the T3AFG200 / T3AFG350 / T3AFG500 models helps to solve the weaknesses inherent in traditional DDS generators when generating arbitrary, square and pulse waveforms. With the above advantages the T3AFG200 / T3AFG350 / T3AFG500 generators can provide users with a variety of high fidelity and low jitter signals, which can meet the growing requirements of a wide range of complex applications.

Tools for Improved Debugging

• Deep Memory – 20 Mpts/Ch.	Generate complex arbitrary waveforms.
• Wide Range of Modulation Types — AM, DSB-AM, FM, PM, FSK, ASK, PWM, Sweep, Burst, and PSK.	Quickly set up modulated waveforms.
• High Resolution – 16 bit resolution.	Generate waveforms with low noise, low spurious signal content and high dynamic range.
Bandwidth Models up to 500 MHz.	⊘ Wide choice of bandwidths.
Built In Arbitrary Waveforms.	Load and replay built in Arbitrary Waveforms.
PRBS and user Defined Waveform capability.	Support for complex applications.
 Single and dual channel models also available, starting from 5 MHz. 	✓ Inquire about the T3AFG40, T3AFG80 and T3AFG120.

Key Specifications

Bandwidth	200 MHz, 350 MHz, 500 MHz
Channels	2 Independent Channels
Memory	20 Mpts/Ch
Sample Rate	2.4 GS/s (2x Interpolation)
Display	4.3 inch Touch Screen TFT LCD
Connectivity	USB Host, USB Device, LAN
Warranty	3 Years

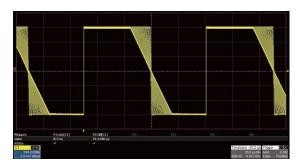

Ordering Information

Model	Bandwidth	Channel	Memory per Ch	Sample Rate per Ch
T3AFG200	200 MHz	2	20 Mpts	2.4 GS/s (2x Interpolation)
T3AFG350	350 MHz	2	20 Mpts	2.4 GS/s (2x Interpolation)
T3AFG500	500 MHz	2	20 Mpts	2.4 GS/s (2x Interpolation)

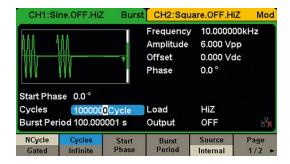

Function	T3AFG200, T3AFG350, T3AFG500
Built-in Waveforms	7 Standard (Sine, Square, Pulse, Ramp, DC, Noise, PRBS), 196 Arbitrary
Input/Output	2 Waveform Outputs, Frequency Counter Input, Aux In/Out, 10 MHz Reference Clock In/Out
Modulation Functions	AM, DSB-AM, FM, PM, FSK, ASK, PSK, PWM, Sweep, Burst, Harmonic
Vertical D/A Resolution	16 Bits
Additional Functions	Sweep, Burst, Waveform Combining, Channel Coupling, Channel Copying, Channel Tracking
Frequency Counter	Built-in high precision Frequency Counter (up to 8 digit resolution)
TrueArb and EasyPulse	Yes
Display Size	4.3" Touch Screen

Excellent Performance

- Bandwidths from 200 MHz to 500 MHz
- All Models have 2 Channels
- 20 Mpts/Channel memory

The rise/fall times can be set independently to a minimum of 1 ns (2 ns on T3AFG200) at any frequency and to a maximum of 75 s.

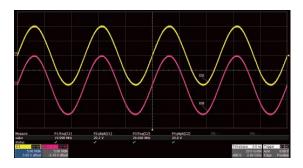

Burst mode supports 'N Cycle' and 'Gated' modes with the Burst source being configured as 'Internal', 'External' or 'Manual'.

Great Connectivity

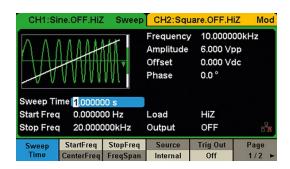

- USB host port for mass storage
- USB device port (USBTMC)
- LAN port on 2 channel models

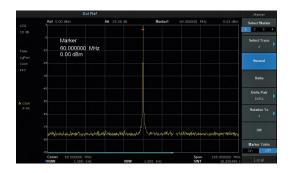

The T3AFG range of Function/Arbitrary Waveform Generators support a wide range of modulation types including AM, FM, PM, FSK, ASK, PSK, PWM and DSB-AM.

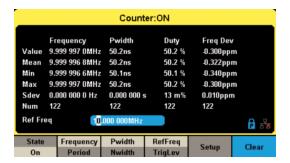

Output amplitude into a high impedance load can be as high 20 Vpp depending on frequency and waveform type.

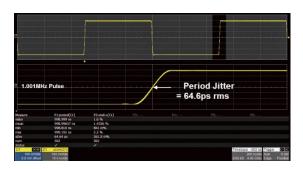

Sweep mode supports 'Linear' and 'Log' sweep, with 'Up' and 'Down' direction, and Sweep source can be configured as 'Internal', 'External' or 'Manual'.

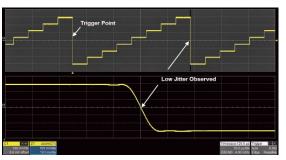

High Fidelity output with 80 dB dynamic range. Sine wave non-harmonic spurious artifacts are $-60 \text{ dBc} \le 350 \text{ MHz}$ and -55 dBc > 350 MHz.

The counter functionality, accessed via the rear panel BNC, gives a DC or AC coupled counter capability from 100 mHz to 400 MHz.

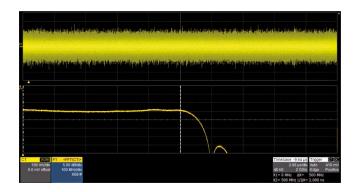

The Teledyne Test Tools T3AFG200, T3AFG350 and T3AFG500, with its low jitter design, can generate waveforms with exceptional edge stability. With better jitter performance comes better edge stability, and higher confidence in your circuit design.

Smart Capabilities

- Sweep output carrier can be Sine, Square, Ramp and Arbitrary waveforms. Linear or Log sweep.
- Burst output under internal or external signal control
- Waveforms types include PRBS (PRBS3 PRBS32)
- Frequency Resolution 1 μHz
- DSB-AM: Double Sideband AM modulation Function
- 10 Order Harmonic Function
- Multi-Language User Interface

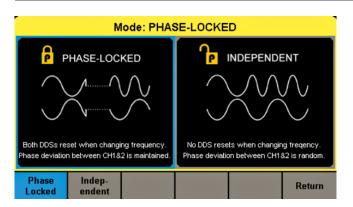

PRODUCT OVERVIEW

Gaussian noise with adjustable bandwidth up to 500 MHz, depending on model. Wide bandwidth Gaussian noise can be added to other waveforms to simulate real-world scenarios in which the signal contains a large degree of noise.

Phase Locked Operation Mode

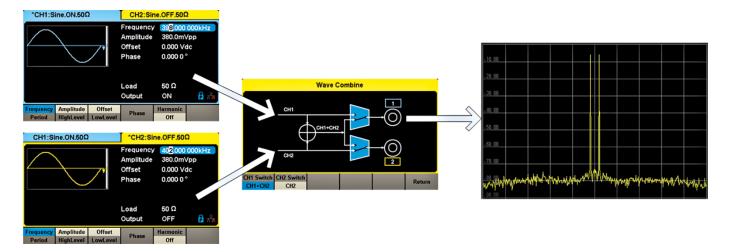

The 'Phase-Locked' mode automatically aligns the phases of each output. While 'Independent' mode permits the two output channels to be used as two independent waveform generators.

Waveform Combining

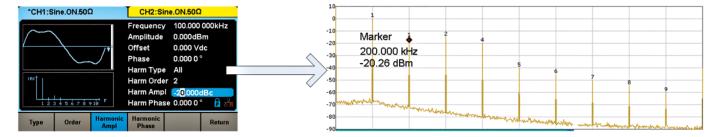

The T3AFG200, T3AFG350 and T3AFG500 have waveform combining capability whereby Channel 1 and Channel 2 can be combined to a user selected output. The combined waveform can be output on both Ch 1 and Ch 2 simultaneously, or just on a single output,

Ch 1 or Ch 2, whilst the other channel outputs the uncombined waveform for that channel. Easily combine basic waveforms (sine, square, ramp, pulse, etc), random noise, modulation signals, burst signals and Arb waveforms.

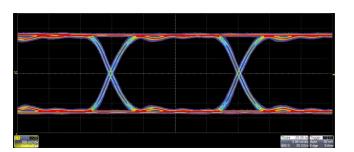

Harmonic Function

The harmonics function gives the user the ability to add higher-order elements to the signal being generated.

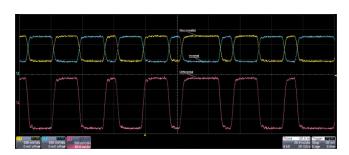

PRBS

The PRBS capability gives the flexibility to generate PRBS waveforms from PRBS3 to PRBS32 at up to 300 Mbps with edge rates from 1 ns to 1 μ s. An added differential mode provides an easy way to generate

differential PRBS signals using both output channels. Easily set outputs to common logic levels such as TTL, ECL, LVCMOS, LVPECL and LVDS using built-in presets.

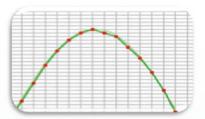

PRODUCT OVERVIEW

14 Bit Resolution

Quantization Level

16 Bit Resolution

14 Bit Resolution

Less accurate waveform generation

16 Bit Resolution

- T3AFG200 / T3AFG350 / T3AFG500 are all 16 bit resolution
- 4 x higher resolution than 14 bit systems
- Lower levels of Harmonic Distortion
- Lower levels of non-harmonic spurious signals
- Improved dynamic range
- Enhanced signal fidelity

I/O Connectivity

- LAN and USB connection
- 10 MHz Reference Input and Output
- The Aux Input/Output BNC Connector supports the Trigger Input, Trigger/Sync Output, external modulation input, external sweep/burst trigger input and external gate input
- External Counter input

Туре	Count (1-1 M cycles)				
Carrier Frequency	2 mHz – Maximum ou	utput frequency			
Stop/Start phase	0 Deg to 360 Deg				
Internal Period	1 μs – 1000 seconds				
Trigger Source	Internal, External, Mar	nual			
Gated Source	Internal, External				
Trigger Delay	Maximum of 100 seco	onds			
Sweep Characteristics					
Carrier	Sine, Square, Ramp, A	rb			
Туре	Linear, Log				
Direction	Linear: Up, Down, Up and Down. Logarithmic: Up, Down				
Carrier Frequency	1 μHz – Maximum output frequency				
Sweep Time	1 ms - 500 seconds				
Trigger Source	Internal, External, Mar	nual			

Model	T3AFG200	T3AFG350	T3AFG500	
Frequency Counter Chara	acteristics			
Function		Positive / Negative Pulse Width, Du	ty Cycle	
Coupling	DC. AC. HF REJ			
Frequency Range	DC: 100 mHz - 400	MHz, AC: 1 Hz - 400 MHz		
DC Input Amplitude	200 mV rms - +/- 2	100 mV rms - +/- 2.5 V < 100 MHz 200 mV rms - +/- 2.5 V 100 MHz - 200 MHz 500 mV rms - +/- 2.5 V > 200 MHz		
AC Input Amplitude	100 mV rms — 5Vpp 200 mV rms — 5Vpp 500 mV rms — 5Vpp	o 100 MHz – 200 MHz		
Input Impedance	1 ΜΩ			
Reference Clock Input				
Frequency	9.999 MHz - 10.00	1 MHz		
Amplitude		into high impedance load		
Input Impedance	5 kΩ			
Reference Clock Output				
Frequency	10 MHz Synchroniz	ed to the internal reference clock		
Amplitude	,	to high impedance load		
Output Impedance	50 Ω			
External Trigger Input (A	uxiliary In/Out)			
V in Low	-0.5 V to +0.8 V			
V in High	2 V to 5.5 V			
Input Impedance	100 kΩ			
Minimum Pulse Width	100 ns			
Maximum Response Time	100 ns - Sweep, 60	00 ns - Burst		
Trigger Output (Auxiliary	In/Out)			
V out Low	Maximum 0.44 V at	. 8 m∆		
V out High	Mimimum 3.8 V at -			
Output Impedance	100 Ω	01101		
Maximum Frequency	1 MHz			
Sync Output (Auxiliary In	//Out) Maximum 0.44 V at	- 8 mΔ		
V out High	Mimimum 3.8 V at -			
Output Impedance	100 Ω			
Maximum Frequency	10 MHz			
Pulse Width	26.7 ns			
Jitter	3.3 ns Peak to peak			
Modulation Input (Auxilia	•			
Frequency	0 Hz to 50 kHz			
Input Impedance	10 kΩ			
Amplitude at 100 % Modulation Depth		2 Vp-p, Max 13 Vp-p		

General Characteristics

Power	
Voltage	100 V to 240 V (+/-10 %) at 50 Hz / 60Hz 100 V to 120 V (+/-10 %) at 400 Hz
Power Consumption	Typical 32.5 W, Maximum 50 W, Dual channel, Sine, 1kHz, 10 Vpp, 50 Ω load
Display	
Color Depth	24 bit
Contrast Ratio	350:1
Luminance	300 cd/m ²
Touch panel type	Resistive
Environment	
Operating Temperature	0 Deg C to 40 Deg C
Storage Temperature	-20 Deg C to 60 Deg C
Operating Humidity	5 % to 90 % ≤ 30 Deg C 5 % to 50 % > 30 Deg C
Non-Operating Humidity	5 % to 95 %
Maximum Operating Altitude	3048 m ≤ 30 Deg C
Maximum Non-Operating Altitude	15000 m
Calibration	
Calibration Interval	Annually
Mechanical	
Dimensions	W x D x H = 260.3 mm x 107.2 mm x 295.7 mm
Net Weight	3.5 kg
Gross Weight	4.6 kg
Compliance	
LVD	IEC 61010-2:2010
EMC	EN61326-1:2013

ABOUT TELEDYNE TEST TOOLS

Company Profile

Teledyne LeCroy is a leading provider of oscilloscopes, protocol analyzers and related test and measurement solutions that enable companies across a wide range of industries to design and test electronic devices of all types. Since our founding in 1964, we have focused on creating products that improve productivity by helping engineers resolve design issues faster and more effectively. Oscilloscopes are tools used by designers and engineers to measure and analyze complex electronic signals in order to develop high-performance systems and to validate electronic designs in order to improve time to market.

The Teledyne Test Tools brand extends the Teledyne LeCroy product portfolio with a comprehensive range of test equipment solutions. This new range of products delivers a broad range of quality test solutions that enable engineers to rapidly validate product and design and reduce time-to-market. Designers, engineers and educators rely on Teledyne Test Tools solutions to meet their most challenging needs for testing, education and electronics validation.

Location and Facilities

Headquartered in Chestnut Ridge, New York, Teledyne Test Tools and Teledyne LeCroy has sales, service and development subsidiaries in the US and throughout Europe and Asia. Teledyne Test Tools and Teledyne LeCroy products are employed across a wide variety of industries, including semiconductor, computer, consumer electronics, education, military/aerospace, automotive/industrial, and telecommunications.
