1.7 CYG2218 Pinouts and Definitions

Pinouts	Pin	Name	Function
 <p>Top View</p>	1	TIP	Connection to telephone line Tip connected through an external fuse.
	2	RING	Connection to telephone line Ring conductor.
	4	OH	Driving this pin high asserts the off-hook condition. The hook switch LED is current limited by an internal 300Ω resistor
	5	RI	Active LOW indicates an incoming ring signal. This is pulsed LOW by the AC ring signal, and is not a steady state LOW during ringing.
	14	RCV	Provides the analog output signal from the 2-4 wire converter of the CYG2218. RCV uses a 2.5 volt reference signal, and therefore must be capacitively coupled to host equipment that uses a ground reference.
	15	NC	No Connection
	16	V_{CC}	Provides power to the CYG2218. Typically +5V, V_{CC} should not exceed 20V.
	17	XMIT+	Provides the analog input signal from the 2-4 wire converter of the CYG2218. XMIT+ uses a 2.5 volt reference signal, and therefore must be capacitively coupled to host equipment that uses a ground reference.
	18	GND	Connection to host system ground.

2 Manufacturing Information

2.1 Handling and Assembly Recommendations

The CYG2218 is not hermetically sealed, and should not be exposed to any liquid-based rinsing processes. IXYS Integrated Circuits Division recommends two (2) approaches: (1) the modem should be installed in a wave-soldering process that uses a no-clean soldering flux that will mostly evaporate during the normal wave-soldering processes, (2) the modem should be soldered in by hand after the rest of the card is wave-soldered.

2.2 Reflow Profile

This product has a maximum solder temperature as shown below.

Device	Maximum Temperature
CYG2218	260°C

2.3 Mechanical Dimensions

2.3.1 CYG2218
