

## Phase Control Thyristor Types N2172ZC400 to N2172ZC450

### Absolute Maximum Ratings

|           | VOLTAGE RATINGS                                 | MAXIMUM LIMITS | UNITS |
|-----------|-------------------------------------------------|----------------|-------|
| $V_{DRM}$ | Repetitive peak off-state voltage, (note 1)     | 4000-4500      | V     |
| $V_{DSM}$ | Non-repetitive peak off-state voltage, (note 1) | 4000-4500      | V     |
| $V_{RRM}$ | Repetitive peak reverse voltage, (note 1)       | 4000-4500      | V     |
| $V_{RSM}$ | Non-repetitive peak reverse voltage, (note 1)   | 4100-4600      | V     |

|               | OTHER RATINGS                                                          | MAXIMUM LIMITS    | UNITS       |
|---------------|------------------------------------------------------------------------|-------------------|-------------|
| $I_{T(AV)}$   | Mean on-state current. $T_{sink}=55^{\circ}C$ , (note 2)               | 2172              | A           |
| $I_{T(AV)}$   | Mean on-state current. $T_{sink}=85^{\circ}C$ , (note 2)               | 1492              | A           |
| $I_{T(AV)}$   | Mean on-state current. $T_{sink}=85^{\circ}C$ , (note 3)               | 905               | A           |
| $I_{T(RMS)}$  | Nominal RMS on-state current. $T_{sink}=25^{\circ}C$ , (note 2)        | 4285              | A           |
| $I_{T(D.C.)}$ | D.C. on-state current. $T_{sink}=25^{\circ}C$ , (note 4)               | 3720              | A           |
| $I_{TSM}$     | Peak non-repetitive surge $t_p=10ms$ , $V_{rm}=0.6V_{RRM}$ , (note 5)  | 28000             | A           |
| $I_{TSM2}$    | Peak non-repetitive surge $t_p=10ms$ , $V_{rm}\leq 10V$ , (note 5)     | 33500             | A           |
| $I^2t$        | $I^2t$ capacity for fusing $t_p=10ms$ , $V_{rm}=0.6V_{RRM}$ , (note 5) | $3.92\times 10^6$ | $A^2s$      |
| $I^2t$        | $I^2t$ capacity for fusing $t_p=10ms$ , $V_{rm}\leq 10V$ , (note 5)    | $5.61\times 10^6$ | $A^2s$      |
| $di_T/dt$     | Maximum rate of rise of on-state current (repetitive), (Note 6)        | 150               | $A/\mu s$   |
|               | Maximum rate of rise of on-state current (non-repetitive), (Note 6)    | 300               | $A/\mu s$   |
| $V_{RGM}$     | Peak reverse gate voltage                                              | 5                 | V           |
| $P_{G(AV)}$   | Mean forward gate power                                                | 5                 | W           |
| $P_{GM}$      | Peak forward gate power                                                | 30                | W           |
| $V_{GD}$      | Non-trigger gate voltage, (Note 7)                                     | 0.25              | V           |
| $T_{HS}$      | Operating temperature range                                            | -40 to +125       | $^{\circ}C$ |
| $T_{stg}$     | Storage temperature range                                              | -40 to +150       | $^{\circ}C$ |

### Notes: -

- 1) De-rating factor of 0.13% per  $^{\circ}C$  is applicable for  $T_j$  below  $25^{\circ}C$ .
- 2) Double side cooled, single phase; 50Hz,  $180^{\circ}$  half-sinewave.
- 3) Single side cooled, single phase; 50Hz,  $180^{\circ}$  half-sinewave.
- 4) Double side cooled.
- 5) Half-sinewave,  $125^{\circ}C$   $T_j$  initial.
- 6)  $V_D=67\% V_{DRM}$ ,  $I_{TM}=1000A$ ,  $I_{FG}=2A$ ,  $t_r\leq 0.5\mu s$ ,  $T_{case}=125^{\circ}C$ .
- 7) Rated  $V_{DRM}$ .

## Characteristics

Notes: -

1) Unless otherwise indicated  $T_j=125^\circ C$ .

**Notes on Ratings and Characteristics****1.0 Voltage Grade Table**

| Voltage Grade | $V_{DRM}$ $V_{DSM}$ $V_{RRM}$<br>V | $V_{RSM}$<br>V | $V_D$ $V_R$<br>DC V |
|---------------|------------------------------------|----------------|---------------------|
| 40            | 4000                               | 4100           | 2000                |
| 42            | 4200                               | 4300           | 2040                |
| 44            | 4400                               | 4500           | 2080                |
| 45            | 4500                               | 4600           | 2100                |

**2.0 Extension of Voltage Grades**

This report is applicable to other and higher voltage grades when supply has been agreed by Sales/Production.

**3.0 De-rating Factor**

A blocking voltage de-rating factor of 0.13%/°C is applicable to this device for  $T_j$  below 25°C.

**4.0 Repetitive dv/dt**

Standard dv/dt is 1000V/μs.

**5.0 Rate of rise of on-state current**

The maximum un-primed rate of rise of on-state current must not exceed 300A/μs at any time during turn-on on a non-repetitive basis. For repetitive performance, the on-state rate of rise of current must not exceed 150A/μs at any time during turn-on. Note that these values of rate of rise of current apply to the total device current including that from any local snubber network.

**6.0 Gate Drive**

The recommended pulse gate drive is 30V, 15Ω with a short-circuit current rise time of not more than 0.5μs. This gate drive must be applied when using the full di/dt capability of the device.

The pulse duration may need to be configured according to the application but should be no shorter than 20μs, otherwise an increase in pulse current may be needed to supply the necessary charge to trigger.

**7.0 Computer Modelling Parameters****7.1 Device Dissipation Calculations**

$$I_{AV} = \frac{-V_0 + \sqrt{V_0^2 + 4 \cdot ff^2 \cdot r_s \cdot W_{AV}}}{2 \cdot ff^2 \cdot r_s} \quad \text{and:} \quad W_{AV} = \frac{\Delta T}{R_{th}}$$

$$\Delta T = T_{jmax} - T_{Hs}$$

Where  $V_0=1.35V$ ,  $r_s=0.294m\Omega$ ,

$R_{th}$  = Supplementary thermal impedance, see table below.

$ff$  = Form factor, see table below.

| Supplementary Thermal Impedance |        |        |        |        |        |        |       |
|---------------------------------|--------|--------|--------|--------|--------|--------|-------|
| Conduction Angle                | 30°    | 60°    | 90°    | 120°   | 180°   | 270°   | d.c.  |

## 7.2 Calculating $V_T$ using ABCD Coefficients

The on-state characteristic  $I_T$  vs.  $V_T$ , on page 5 is represented in two ways;

- the well established  $V_0$  and  $r_s$  tangent used for rating purposes and
- a set of constants A, B, C, D, forming the coefficients of the representative equation for  $V_T$  in terms of  $I_T$  given below:

$$V_T = A + B \cdot \ln(I_T) + C \cdot I_T + D \cdot \sqrt{I_T}$$

The constants, derived by curve fitting software, are given below for both hot and cold characteristics. The resulting values for  $V_T$  agree with the true device characteristic over a current range, which is limited to that plotted.

| 125°C Coefficients |                            |
|--------------------|----------------------------|
| A                  | 1.206343083                |
| B                  | $-9.850722 \times 10^{-3}$ |
| C                  | $2.481443 \times 10^{-4}$  |
| D                  | $6.537845 \times 10^{-3}$  |

## 7.3 D.C. Thermal Impedance Calculation

$$r_t = \sum_{p=1}^{p=n} r_p \cdot \left( 1 - e^{\frac{-t}{\tau_p}} \right)$$

Where  $p = 1$  to  $n$ ,  $n$  is the number of terms in the series and:

$t$  = Duration of heating pulse in seconds.

$r_t$  = Thermal resistance at time  $t$ .

$r_p$  = Amplitude of  $p$ th term.

$\tau_p$  = Time Constant of  $r$ th term.

## 8.0 Reverse recovery ratings

- $Q_{ra}$  is based on 50%  $I_{RM}$  chord as shown in Fig. 1.
- $Q_{rr}$  is based on a  $150 \mu s$  integration time.

i.e.

$$Q_{rr} = \int_0^{150 \mu s} i_{rr} \cdot dt$$

- $$K \text{ Factor} = \frac{t1}{t2}$$
