PLED Series

Description

PLED Series open LED protectors provide a switching electronic shunt path when an LED in an LED string fails as an open circuit. This ensures that the remaining string of LEDs will continue to function if a single LED does not.

PLED Series devices were designed to enable higher reliability in outdoor LED lighting applications such as street lighting, outdoor signage, aircraft runway lighting, roadside warning lights and other applications.

Compatible with one, two and three watt LEDs that have a nominal 3V forward characteristic, PLED Series devices are available in two surface mount packages, the DO-214 and the Quad Flat Pak No-lead (QFN). The QFN's low profile, chip scale package (CSP) is ideal for dense board applications.

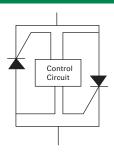

Agency Approvals

Agency Agency File Number E133083

Features & Benefits

- Fast switching
- Automatically resets after power cycle
- Available in low profile, small footprint QFN and Standard DO214AA packages
- Compatible with industrial lighting environments
- Compatible with PWM frequencies up to 30 kHz
- RoHS compliant and halogen-free

Schematic Symbol

Thermal Considerations

| Package | | Symbol | Parameter | Value | Unit |
|---------|--------|------------------|---|---|------|
| QFN 3x3 | | T_{J} | Operating Junction Temperature Range | -40 to +150 | °C |
| | DO-214 | T _s | Storage Temperature Range | -65 to +150 | °C |
| | | R _{eJA} | Thermal Resistance: Junction to Ambient | DO-214: 90 ¹ DO-214: 40 ² QFN: 120 ¹ QFN: 60 ³ | °C/W |

Notes

1) Standard FR-4 PCB with Copper Pads (Recommended Size)

2) Aluminum PCB

Thickness: 1.6mm

Grade: 1-2 W/mK Thermal Conductivity

Trace thickness: 2 oz

Insulation layer thickness: 215 um

Solder Pad Dimensions: 2.0mm x 2.8mm (Recommended Size)

3) Aluminum PCB

Thickness: 1.6mm

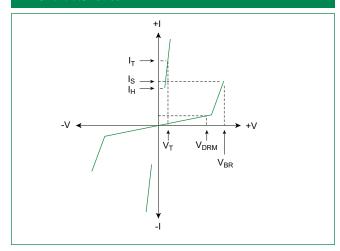

Grade: 1-2 W/mK Thermal Conductivity

Trace thickness: 2 oz

Insulation layer thickness: 60 um

Solder Pad Dimensions: 1.27mm x 2.54mm (Recommended Size)

LED Interference Test Circuit

6 LEDs in Series 50% Duty Cycle 10kHz

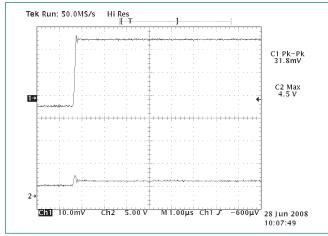

5 LEDs and 1 PLED in Series 50% Duty Cycle 10kHz

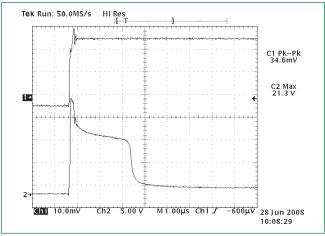

Note: These two graphs show the current magnitude through the LED string with and without the PLED included. There is no noticeable effect on the LED current magnitude when the PLED is included in the circuit as compared to the LED current magnitude when the PLED is not in the circuit. (The conversion factor for the test measurement in the graphs above is 10mA/mV for the Pearson coil measurement, therefore, the current magnitude in the first figure is 10mA*8.9 = 89mA, while the second figure is 91mA.)

PLED in the Off-State 10kHz

Channel 1: current through LEDs (318 mA) Channel 2: voltage across PLED device (4.5 V)

PLED device zeners and then turns fully on 10kHz

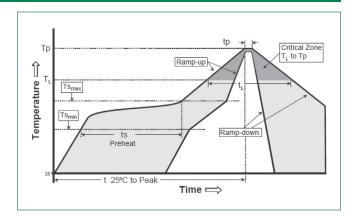

Channel 1: current through LEDs (346 mA) and PLED device once it is fully turned on 2.5 μ sec later Channel 2: voltage across PLED device (21.3 V before PLED crowbars with 2 V drop)
