Description

The new LT Series device provides reliable, noncycling protection against overcharging and short circuits events for rechargeable battery cells where resettable protection is desired.

Features

- RoHS compliant and lead–free
- Weldable Nickel terminals
- Compact design saves
- Low resistance
- Provides overcurrent protection at 100°C trip temperature

Applications

board space

- Rechargeable battery cell
 protection
 - Mobile phones
 - Laptop computers

Electrical Characteristics

Part Number	l _{hold}	۱ _{trip}	V _{max}	P _d Maximum Time To Trip		Resistance					Agency Approvals		
Part Number	(A)	(A)	(Vdc)	(A)	(W)	Current (A)	Time (Sec.)	R _{min} (Ω)	R _{typ} (Ω)	R _{1max} (Ω)	c 🔊 us	Д тüv	
24LT100	1.0	2.5	24	100	1.5	5.00	7.00	0.070	0.130	0.260	x	х	

I _{hold} = Hold current: maximum current device will pass without tripping in 20°C still air. I $_{trip}$ = Trip current: minimum current at which the device will trip in 20°C still air.

 V_{trip} = Maximum voltage device can withstand without damage at rated current (I max)

 V_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max})

 P_{max} = Power dissipated from device when in the tripped state at 20°C still air.

R min = Minimum resistance of device in initial (un-soldered) state.

R $_{typ}$ = Typical resistance of device in initial (un-soldered) state.

R $_{1max}$ = Maximum resistance of device at 20°C measured one hour after tripping or reflow soldering of 260°C for 20 sec.

 $\ensuremath{\textbf{Caution:}}$ Operation beyond the specified rating may result in damage and possible arcing and flame.

Temperature Rerating

Ambient Operation Temperature												
	-40°C -20°C 0°C 20°C 40°C 50°C 60°C 70°C 85°C											
Part Number	Hold Current (A)

WARNING

· Users shall independently assess the suitability of these devices for each of their applications

• Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire

• These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration

• Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices

• These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses

• Circuits with inductance may generate a voltage (L di/dt) above the rated voltage of the PPTC device.

Axial Lead Battery Strap Type > LT Series

Average Time Current Curves

The average time current curves and Temperature Rerating curve performance is affected by a number or variables, and these curves provided as guidance only. Customer must verify the performance in their application.

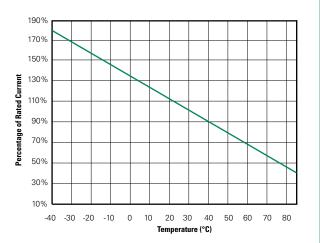

Additional Information

Temperature Rerating Curve

Note:

Typical Temperature rerating curve, refer to table for derating data

Physical Specifications

Terminal Material	0.13mm nominal thickness, quarter-hard Nickel
Insulating Material	Polyester tape

Environmental Specifications

Operating/Storage Temperature	-40°C to +85°C
Maximum Device Surface Temperature in Tripped State	125°C
Passive Aging	+70°C, 1000 hours -/+10% typical resistance change
Humidity Aging	+85°C, 85%R.H.,7days, -/+5% typical resistance change
Vibration	MIL-STD-883, Condition A, No change
