

# MP-2835 Mid Power LED Color Series Package

#### **Features:**

- Thermally Enhanced Package Design
- High luminous flux output
- High current capability
- Compact Package Size
- Pb-free Reflow Soldering Application
- RoHS compliant

# **Technology Overview**

Luminus mid power LEDs are lighting class solutions designed for high performance general lighting applications. These state-of-the-art LEDs allow illumination engineers and designers to develop lighting solutions with maximum efficacy, brightness and overall quality.

#### Reliability

Luminus mid power LEDs are one of the most reliable light sources in the world today. Having passed a rigorous suite of environmental and mechanical stress tests, including mechanical shock, vibration, temperature cycling and humidity, it is fully qualified for use in a wide range of high performance and high efficacy lighting applications.

#### **REACh and RoHS Compliance**

The Luminus 2835 mid power LED is compliant to the Restriction of Hazardous Substances Directive or RoHS. The restricted materials including lead, mercury cadmium hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ether (PBDE) are not used.

# **Understanding Luminus™ Mid Power LED Test Specifications**

Every Luminus LED is fully tested to ensure it meets the high quality standards customers have come to expect from Luminus products.

#### **Testing Temperature**

LuminusMid Power products are measured at a junction temperature of 25C and placed into intensity, chromaticity and voltage bins as described here in

# **Product Selection Table**

Test condition = 60 mA, 25 °C

Color	De et Nuese h en	Radiant Flux (mW)			
	Part Number	Тур.	Min.		
Meat Red	MP-2835-1100-MR	30	34		
Deep Red	MP-2835-1100-DR	62	50		
Far Red	MP-2835-1100-FR	45	34		
Green	MP-2835-1100-PG	100	90		
Blue	MP-2835-1200-B	115	90		

\*Tolerance of measurements of the luminous flux is  $\pm 7\%$ 

\* Tolerance of measurements of the CRI is  $\pm 2$ 

\*IFP condition with Pulse: Width  $\leq$ 100µs Duty cycle  $\leq$ 1/10

#### 2835 Mid Power Operating Characteristics- Meat Red

#### **Optical and Electrical Characteristics(Ta=25°C)**

Parameter	Symbol	Minimum	Typical	Maximum	Unit	Condition
Forward Voltage	VF	2.6	2.8	3.2	V	۱ <sub>۴</sub>
Reverse Current	Ir			10	uA	V <sub>R</sub> =5V
View Angle	20 <sup>1/2</sup>		120		o	I <sub>f</sub> =60mA
Thermal Resistance	Rth <sub>j-sp</sub>		21		°C/W	I <sub>f</sub> =60mA
Electrostatic Discharge	ESD	1000			V	HBM
Radiant Flux	Фе	155	165	175	mW	I <sub>f</sub> =60mA
Domant Wavelength	λ	635	640	645	nm	l <sub>f</sub> =60mA

#### Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Rating	Unit
DC Forward Current	I <sub>FD</sub>	200	mA
Peak Pulse Current (tp ≤10ms,Duty cycle = 1/10)	I <sub>FP</sub>	280	mA
Reverse Voltage	V <sub>R</sub>	5	V
Power Dissipation	P <sub>D</sub>	600	W
LED Junction Temperature	ιT	115	°C
Operation Temperature	Topr	-40~+85	°C
Storage Temperature	Tstg	-40~+100	°C
Soldering Temperature	Tsol	260° for 10 sec	°C

Note 1: To prevent damage refer to operating conditions and derating curves for appropriate maximum operating conditions

- Note 2: Maximum operating case temperature combined with maximum drive current defines the total maximum operating condition for the device. To prevent damage, please follow derating curves for all operating conditions.
- Note 3: Mid power LEDs are designed for operation up to an absolute maximum forward drive current as specified above. Product lifetime data is specified at typical forward drive currents. Sustained operation at absolute maximum currents will result in a reduction of device lifetime compared to typical forward drive currents. Actual device lifetimes will also depend on case temperature. Refer to the current vs. case temperature derating curves for further information.
- Note 4: Caution must be taken not to stare at the light emitted from these LEDs. Under special circumstances, the high intensity could damage the eye.

\*IFP condition with Pulse: Width  $\leq$  100 $\mu$ s Duty cycle  $\leq$  1/10

#### 2835 Mid Power Operating Characteristics- Deep Red

# Product Ordering and Shipping Part Number Nomenclature

All mid power products are packaged and labeled with part numbers as outlined in below. When shipped, each reel will contain only a single flux and voltage bin. The part number designation is as follows:

2835 Mid Power LEDs								
Mid Power	Package Type	Package Configurator	Color	Radiant Flux	Forward Voltage	Peak Wavelength		
MP	2835	1100/1200	MR (Meat Red) RD (Deep Red) FR ( Far Red) B ( Blue)	##	##	##		

Example:

The part number MP-2835-2100-B-xxxxxx refers to a 2835 mid power emitter with nominal color tempecture of 3,000k and minimum CRI of 80. Please refer to page 5 for a description of available CCT and CRI combinations.

SMT Rework Guideline	Manual Hotplate Reflow	Hot Air Gun Reflow
Heating Time	< 60	) sec
Hotplate Temperature	< 245°C	< 150°C

Note 1: Product complies to Moisture Sensitivity Level 3 (MSL 3).

Note 2: The numbers in the table are specific to SAC305. Luminus recommends using an SAC305 solder paste with a no-clean flux for RoHS compliant products.

Note 3: During the pick and place process, axial forces on the dome (or window) should not exceed 0.5 Newtons (N).

Note 4: Use of a multi-zone IR reflow oven with a nitrogen blanket is recommended.

Note 5: Time-temperature profile of the reflow process showing the four functional profile zones are defined in IPC-7801. Temperature is referenced to the center of the PCB.

Note 6: Luminus recommends to use the solder paste data sheet information as a starting point in time-temperature process development.

Note 7: These are general guidelines. Consult the solder paste manufacturer's datasheet for guidelines specific to the alloy and flux combination used in your application. For more information, please refer to:

https://luminusdevices.zendesk.com/hc/en-us/articles/360060306692-How-do-I-Reflow-Solder-Luminus-SMD-Components-

Note 8: For any technical questions about soldering process, please contact Luminus at techsupport@luminus.com.

# **STORAGE**

1.1 Before opening the package

The LEDs should be kept at <40°C& <90%RH. The LEDs should be used within a year. When storing the LEDs, moisture proof package with absorbent material (silica gel) is recommended.

#### 1.2 After opening the package

The LEDs should be kept at ≤30 °C & ≤60%RH. The LEDs should be soldered within 72 hours (3 days) after opening the moisture proof package.

If unused LEDs remain, they should be stored in moisture proof packages, such as sealed containers with moisture proof package within absorbent material (silica gel). It is also recommended to return the unused LEDs to the original moisture proof package and to seal the moisture proof package again.

If the moisture absorbent material (silica gel) vapors or expires the expiration date, baking treatment should be performed by using the following conditions : 60 °C for 20 hours.

The LEDs electrode and leadframe comprise a silver plated copper alloy. The silver surface may be affected by environments. Please avoid conditions which may cause the LEDs being corroded or discolored. The corrosion or discoloration might lower solder-ability or affect optical characteristics.

Please avoid rapid transition in ambient temperature, especially in high humidity environments where condensation can occur.

# STATIC ELECTRICITY

The products are sensitive to static electricity and highly taken care when handling them.

Static electricity or surge voltage will damage the LEDs. It is recommended to wear an anti-electrostatic wristband or an anti-electrostatic glove when handling the LEDs.

All devices, equipment and machinery must be properly grounded. It is recommended that measures be taken against surge voltage to the equipment that mounts the LEDs.
