- 1. Reverse Current Operation is not allowed.
- 2. Product performance and lifetime data is specified at recommended forward drive currents. Sustained operation at or near absolute minimum currents may result in a reduction of device performance and device lifetime compared to recommended forward currents.
- 3. Sustained operation above maximum currents is not recommended and will result in a reduction of device lifetime compared to specified maximum forward drive currents. Device lifetimes will depend on junction temperature.
- 4. In pulsed operation, rise time from 10% to 90% of forward current should be larger than 0.5 microseconds.
