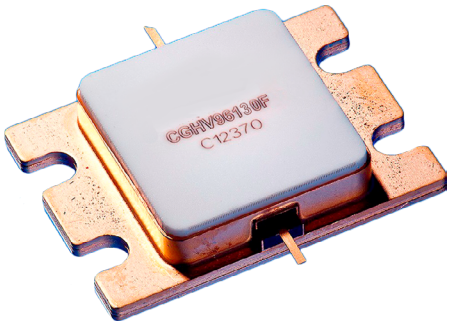
CGHV96130F

130 W, 8.4 - 9.6 GHz, 50-ohm, Input/Output Matched GaN Amplifier



Package Type: 440217
PN: CGHV96130F

Description

The CGHV96130F is a gallium nitride (GaN) amplifier. This GaN amplifier offers excellent power added efficiency in comparison to other technologies. GaN has superior properties compared to silicon or gallium arsenide, including higher breakdown voltage, higher saturated electron drift velocity and higher thermal conductivity. GaN HEMTs also offer greater power density and wider bandwidths compared to GaAs transistors. This amplifier is available in a metal/ceramic flanged package for optimal electrical and thermal performance.
