

35Ω, SPST/SPDT, +3V Logic-Compatible Analog Switches

DG417L/DG418L/DG419L

General Description

The DG417L/DG418L/DG419L precision, CMOS analog switches feature low on-resistance ($R_{ON} = 35\Omega$), guaranteed R_{ON} matching between switches (3Ω max), and guaranteed R_{ON} flatness over the signal range (4Ω max). These switches are +3V logic-compatible when powered from $\pm 15V$ or $\pm 12V$ supplies. The switches conduct equally well in either direction, and feature low charge injection and low power consumption. The DG417L/DG418L/DG419L also offer low off-leakage current over temperature (less than $5nA$ at $+85^\circ C$).

The DG417L/DG418L are single-pole/single-throw (SPST) switches. The DG417L is normally closed, and the DG418L is normally open. The DG419L is single-pole/double-throw (SPDT) with one normally closed switch and one normally open switch. Switching times are less than $175ns$ for t_{ON} and less than $185ns$ for t_{OFF} . These devices operate with a single $+9V$ to $+36V$ or bipolar $\pm 4.5V$ to $\pm 20V$ supplies.

The digital input has a $+0.8V$ logic-low threshold and a $+2.0V$ logic-high threshold, ensuring +3V TTL and CMOS-logic compatibility. The DG417L/DG418L/DG419L are available in a tiny 8-pin μMAX , 8-pin SO, or convenient 8-pin plastic DIP. All products are rated at the extended temperature range of $-40^\circ C$ to $+85^\circ C$.

Applications

- | | |
|------------------------------|--------------------------|
| Sample-and-Hold Circuits | Communications Systems |
| Test Equipment | Battery-Operated Systems |
| Modems | Fax Machines |
| Guidance and Control Systems | PBX, PABX |
| Audio Signal Routing | Military Radios |

Features

- ◆ +3V Logic-Compatible Digital Inputs
 $V_{IH} = 2.0V$
 $V_{IL} = 0.8V$
- ◆ Plug-In Upgrades for Industry-Standard
DG417/DG418/DG419 and
MAX317/MAX318/MAX319
- ◆ Power-Supply Sequencing-Free Operation
- ◆ Low On-Resistance (35Ω max)
- ◆ Guaranteed Matched On-Resistance Between Channels (3Ω max)
- ◆ Guaranteed On-Resistance Flatness (4Ω max)
- ◆ Single-Supply Operation $+9V$ to $+36V$
Dual-Supply Operation $\pm 4.5V$ to $\pm 20V$
- ◆ Guaranteed Off-Leakage Current Over Temperature ($<5nA$ at $+85^\circ C$)
- ◆ Rail-to-Rail Analog Signal Handling Capability
- ◆ Tiny 8-Pin μMAX Package

Ordering Information

PART	TEMP. RANGE	PIN-PACKAGE
DG417LEUA	$-40^\circ C$ to $+85^\circ C$	8 μMAX
DG417LDY	$-40^\circ C$ to $+85^\circ C$	8 SO
DG417LDJ	$-40^\circ C$ to $+85^\circ C$	8 Plastic DIP

35Ω, SPST/SPDT, +3V Logic-Compatible Analog Switches

ABSOLUTE MAXIMUM RATINGS

Voltage referenced to V-

V+	44V
GND	25V
IN	-0.3V to +44V
COM, NC, NO (Note 1)	(V- - 0.3V) to (V+ + 0.3V)
Continuous Current (any terminal) (Note 1)	±30mA
Peak Current, COM, NO, NC (pulsed at 1ms, 10% duty cycle max)	±100mA

Continuous Power Dissipation (T_A = +70°C)

8-Pin μMAX (derate 4.5mW/°C above +70°C)	362mW
8-Pin SO (derate 5.9mW/°C above +70°C)	471mW
8-Pin Plastic DIP (derate 9.1mW/°C above +70°C)	727mW
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C

Note 1: Signals on COM, NO, or NC exceeding V+ or V- are clamped by internal diodes. Limit forward current to maximum current ratings.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Dual ±15V Supplies

(V+ = +15V, V- = -15V, V_{IH} = 2.0V, V_{IL} = 0.8V, T_A = T_{MIN} to T_{MAX}, unless otherwise noted. Typical values are at T_A = +25°C.) (Notes 2, 3)

Note 2: The algebraic convention is used in this data sheet; the most negative value is shown in the minimum column.

Note 3: -40°C specifications are guaranteed by design.

Note 4: Flatness is defined as the difference between the maximum and the minimum value of on-resistance as measured at the extremes of the specified analog range.

Note 5: Leakage parameters are 100% tested at maximum rated hot temperature and guaranteed by correlation at TA = +25°C.

Note 6: Guaranteed by design.

Note 7: Off-isolation = 20log10 [VCOM / (VNC or VNO)], VCOM = output, VNC or VNO = input to off switch.

Note 8: Between Switches

Applications Information

Power-Supply Sequencing-Free Operation

Most CMOS switches require specific power-supply sequencing in order to prevent device latchup. The older DG417/DG418/DG419 devices require a proper power-supply sequence of V+, V_L, then V-. Otherwise,

it is necessary to add signal diodes to the circuit in order to prevent potential latchups. The new DG417L/DG418L/DG419L devices eliminate the need for a V_L input and allow any power-up sequence. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices.
