

## DS2782EVKIT+ Standalone Fuel Gauge IC Evaluation Kit

#### www.maxim-ic.com

#### FEATURES

- Demonstrates the capabilities of the DS2782 Standalone Fuel Gauge, including:
  - Estimation of available capacity for Li+ cells
  - Voltage measurement
  - Current measurement
  - Current accumulation
  - Temperature measurement
  - Information storage
  - Identification
- Interfaces to the USB port of a PC running Windows® XP or older operating system

## **EVALUATION KIT CONTENTS**

1 pc. Evaluation Board 1 pc. DS9123O USB Adapter

1 pc. RJ-11 Cable

### **EQUIPMENT NEEDED**

- 1. A PC running Windows XP or older operating system and an available USB port.
- 2. Cables with mini-grabber style clips or the ability to solder directly to connection pads.
- 3. A Lithium-Ion battery and a power supply and/or load circuit.

Windows XP is a registered trademark of Microsoft Corp.

#### INTRODUCTION

The DS2782 evaluation kit (EV kit) makes performance evaluation, software development, and prototyping with the DS2782 Standalone Fuel Gauge easy. The evaluation board interfaces to a PC through a DS9123O USB Adapter and RJ-11 cable connection.

The DS2782 EV kit evaluation software gives the user complete control of all functions of the DS2782. Separate control tabs allow the user access to all EEPROM and RAM memory locations, all control registers, and real-time updates of all monitored parameters. The software also incorporates a data-logging feature to monitor a cell over time.

The evaluation board circuit is designed to provide the DS2782 with accurate parameter measurements. Kit demonstration boards will vary as they are improved upon over time. For information on the demonstration board circuits refer to the individual board datasheets located online at www.maxim-ic.com.

#### SETUP AND INSTALLATION

#### **BOARD CONNECTIONS**

Connections to the TSSOP demonstration board are best made either by soldering directly to the pads or by using cables with mini-grabber clips. Communication to the TSSOP board can be accomplished either through the RJ-11 jack by connecting the provided standard six conductor RJ-11 cord or by wiring directly to the SDA, SCL and P- pads. In the latter case, the size of the board can be reduced by snapping off the RJ-11 jack along the break line, see Figure 1. To utilize the demonstration software, the SDA, SCL and PAC- lines must be connected to the DS9123O communication brick using either of the two methods described.

**Figure 1: Communication Connections** 

Figures 2a and 2b show the recommended circuits to simulate charging and discharging. The Lithium-Ion cell is connected between the B+ and B- pads. The battery charger/power supply or circuit load is connected between the B+ and P- pads. The evaluation software can be run in either configuration as long as a cell is connected between the B+ and B- terminals providing a minimum of 2.5 volts to power the DS2782. Leaving the PIO pin unconnected does not interfere with the operation of the demonstration board. Refer to the datasheet for the operation of this pin.

Figure 2a: Charging Circuit

Fig 2b: Discharging Circuit

#### SOFTWARE INSTALLATION

To install the DS2782 EV kit software, exit all programs currently running and download the latest version at www.maxim-ic.com. Unzip the compressed file and double click the SETUP.EXE icon to begin the installation process. Follow the prompts to complete the installation. The DS2782 EV kit software can be uninstalled in the Add/Remove Programs tool in the Control Panel. After the installation is complete, open the DS2782K folder and run DS2782K.EXE or select DS2782K from the program menu. A splash screen containing information about the evaluation kit appears as the program is being loaded.

#### SELECTING THE COMMUNICATION PORT

The first time the software runs, the Select Preferences window may appear. In this window, select either serial or USB communication and the port number; then hit OK. The DS2782 EV kit software saves this port selection and automatically uses the selection each time the program starts. To change the port later, click the Preferences option on the menu bar, select Port Settings, and then select the appropriate port. To attempt to automatically locate the DS9123O, click the Poll Serial Ports button. Warning - automatically polling for the DS9123O can disrupt other devices connected to your computer's COM ports.

#### **PROGRAM MENUS**

Several pull down menu options have been provided to simplify use of the DS2782 EV kit software for the user. Their functions are individually detailed below.

#### FILE MENU

🕆 DS2782K	
File Registers Preferences	Help
Save Parameter Set up	
Load Parameter Set up	

The File Menu allows the user to store and recall information to and from a file directly into the text boxes on the Parameters Tab. These functions do not directly write or read the DS2782. It is still necessary for the user to store or recall this information to or from the device by clicking on the Write & Copy or Recall & Read buttons on the Parameters Tab.

#### **REGISTERS MENU**

₿ 0	)S2782K	
File	Registers Preferences Help	
_	Status Register	
	Special Feature Register	
	EEPROM Register	
	Control Register	

The Registers Menu gives immediate access to all four status and function registers of the DS2782. Selecting any of the registers will open an individual control window giving the user a description of each register bit and the ability to read or write it. See the status register window example.

#### STATUS REGISTER

🕀 Status	s Register		- DX
Bit 7	CHGTF	The Charge Termination Flag is :	Clear
Bit 6	AEF	The Active Empty Flag is :	Clear
Bit 5	SEF	The Stand-by Empty Flag is :	Clear
Bit 4	LEARNF	The Learn Flag is :	Clear
Bit 2	UVF	The Under Voltage Flag is :	Clear
Bit 1	PORF	The Power-On-Reset Flag is :	Clear
Bit O	VER	The Version Flag is :	Set -> DS2782A
		Re	

The present state of all register bits are displayed immediately upon opening the register window. R/W locations contain a selection field or command button to allow the user to determine their state. Pressing

the WRITE button will write the new value to the register and read the corresponding register inside the DS2782 to verify the correct value was written. The Control Register is stored in EEPROM, so when the WRITE command is issued, the value is written and copied to EEPROM without changing the values of the remainder of the Parameter EEPROM block.

#### **PREFERENCES MENU**

0 đ	)S2782K			
Eile	<u>R</u> egisters	<u>P</u> references	<u>H</u> elp	
		Edit Prefer	ences	

The Preferences Menu allows the user to change COM port settings at any time. Edit Preferences opens the Select Preferences window. See Selecting the Communication Port above.

#### **HELP MENU**

	)S2782K			
Eile	<u>R</u> egisters	<u>P</u> references	<u>H</u> elp	
			About	

Selecting the About topic from the Help Menu will open a window containing information about the current revision of this program and Dallas Semiconductor.

#### **PROGRAM TABS**

All functions of the program are divided under four tabs in the main program window. Left click on the appropriate tab to move to the desired function page. Located on the Real Time tab is all of the information measured and calculated by the DS2782. That data is divided between the Parametric Data Tab and Fuel Gauging Tab. The Parameters Tab gives the user access to the entire Parameter EEPROM memory block in terms of Application Units and Device Units. The Memory tab displays the contents of every register and memory location inside the DS2782 and allows the user to alter the data. The Data Log tab allows the user to store all real time information to a file and view the data in a graphical form.

#### **REAL TIME TAB**

The Real Time data is divided into two tabs: Parametric Data and Fuel Gauge Data. The Parametric Data Tab contains all of the real time measurements taken by the DS2782. The Fuel Gauge Data contains all of the values calculated by the DS2782.

#### Parametric Data Tab DS2782K File Registers Preferences Help Real Time Parameters Memory Log Data Parametric Data | Fuel Gauge Data | Voltage Current ACR Temperature 125 Charge Amps Degrees C Remaining 3.7137 Volts -250.0781 mA 667.1874 mAhr 23.8750 C Average Current 74.975 F -250.0781 mA Set ACR RSense: 20.00 mOhms Set Acc Bias Slave Address: 68h Set PIO bit PIO Pin is : Low Update Slave Address

The Parametric Data Sub Tab displays the latest real-time measurements of cell voltage, temperature, current and accumulated charge with both analog meter readouts and digital values. The sense resistor value used to calculate the current reading is shown in the current section. Go to the sense resistor value on the Parameters Tab to change this value

The present states of PIO pin is shown at the bottom left of the window. There is also a button to toggle the state of the PIO pin.

#### Set Accumulated Current Register

The user can bring up the Set Accumulated Current Register window by left clicking the Set ACR button. This window allows the user to enter a value for the Accumulated Current Register in mAH.

# Set Accumulation Bias Register

Read

The user can bring up the Set Accumulation Bias Register window by left clicking the Set Acc Bias button. This window allows the user to enter values for the Accumulation Bias Register in mA. The value entered here will be added to the Accumulated Current Register during each current conversion. The bias value will not affect the Current Register reading, but will be reflected in the Accumulated Current Register.

Write

Done

#### **Update Slave Address**

🕀 Update Slave		×	
New Slave Addres Slave Address Fou	- poon	< Use this Address Find Slave Address	
Read	Write	Done	

When the DS2782 EV kit software starts up, it will attempt to find the Slave Address of the device connected to the DS9123O. If the device is not found at start up, the user can edit the Slave Address by left clicking on the Update Slave Address button. If the user knows the Slave Address, simply enter the correct Slave address in the text box and click the Use this Address button. If the Slave Address is unknown, clicking on the Find Slave Address button will begin a search of all addresses on the 2-wire bus. The slave address of the device can be changed by entering a new slave address in the text box and clicking the Write Slave Address button.

Fuel Gauge Data Tab			
🖶 DS2782K			- DX
<u>File R</u> egisters <u>P</u> references <u>H</u> elp			
Real Time Param	eters	Memory	Log Data
Parametric Data [			
	Levels		- Flags
	Full	1072.58 mAhr	O Full Charge
1/2	Active Empty	55.65 mAhr	O Active Empty O Stand-by Empty
	Stand-by Empty	4.30 mAhr	O Learn
	Capacities		O Under Voltage
Percent	RAAC	604.8 mAhr	O Power-On-Reset
Remaining	RARC	59 %	
	RSAC	656.0 mAhr	
	RSRC	61 %	
	Scalar	00 0400 %	
	Update	89.8438 %	

The Fuel Gauge Data Sub Tab displays the latest fuel gauge calculations. The Full, Active Empty, and Standby Empty levels are calculated from the data input on the Parameters Tab. The Remaining Active Absolute Capacity (RAAC) and the Remaining Stand-by Absolute Capacity (RSAC) are displayed in terms of mAhrs. The Remaining Active Relative Capacity (RARC), Remaining Stand-by Relative Capacity (RSRC) are displayed in terms of percent of capacity remaining. The Analog Meter on the left displays the Remaining Active Absolute Capacity (RAAC).

The flags found in the Status Register are displayed on the right side of the window. When the Under Voltage Flag or the Power-on-Reset Flag is set, a button will appear that will allow the user to clear those bits.

#### Scalar Register

🕆 Set Age Scala	r	
New Scalar Value	89.843750	%
Read	Write	Done

The user can bring up the Set Age Scalar window by left clicking the Update button in the Scalar area. This window allows the user to read and write the Scalar value in terms of percent of the nominal capacity.

#### PARAMETERS TAB

The Parameters Tab gives the user access to the entire Parameter EEPROM memory block (block 1, addresses 60h-7Fh) in terms of Application Units and Device Units. The Application Units Tab displays the parameters in units like mA, mAhrs, and volts. The Device Units Tabs performs the calculations needed to get the application units into the units that are stored in the device like  $\mu$ V,  $\mu$ Vhrs, and ppm as well as show the hexadecimal values that get written to the device.

#### **Application Units Tab**

🕆 DS2782K						- OX	
File Registers Preferences He	lp

Save Set Up		oad Set up			call & Read	Jp	

The Application Units Sub Tab allows the user to read and write the Parameter EEPROM memory block. To change any of this information, simply click on the desired text field and enter the new value.

Clicking on the Load Default Set Up button will enter example data into the information fields of the Application Units Sub Tab. Once all data is in the desired format, click on the Write & Copy button to copy it to the EEPROM of the DS2782.

This information can also be stored to a file and recalled later using the Load/Save Set Up buttons or the Load/Save Parameters Set Up Menu Items. These functions do not directly write or read the DS2782. It is still necessary for the user to store or recall this information to or from the device by issuing a Write & Copy or Recall & Read buttons.

#### **Device Units Tab** DS2782K <u>File R</u>egisters <u>Preferences</u> <u>H</u>elp Real Time Log Data Memory Parameters Application Units Device Units (Read Only) Hex Value Device Units Hex Value Device Units 60h: Control 6Ch: Full 30-40 Slope 40h 0Eh 854 ppm 6Dh: Full 20-30 Slope 13h |1160 ppm | 61h: Acc Bias 0.000000 mV 00h 6Eh: Full 10-20 Slope 33h 3113 ppm 62/63h: Capacity 6Fh: Full 00-10 Slope 0F40h 24.40000 mVhr: 3Bh | 3601 ppm 64h: Charge Voltage 70h: AE 30-40 Slope D5h 4.15776 V 05h 305 ppm 65h: Charge Current 71h: AE 20-30 Slope 20h 1.60 mV 0Bh 671 ppm 72h: AE 10-20 Slope 12h 1099 ppm 66h: AE Voltage 3.20128 V A4h 73h: AE 00-10 Slope 2380 ppm 27h 67h: AE Current 2Ah 8.4 mV 74h: SE 30-40 Slope 183 ppm 03h 68h: Active Empty 40 27h 0.0380859 75h: SE 20-30 Slope 04h 244 ppm 69h: RSNSP 76h: SE 10-20 Slope 20.0000 mOhm: 32h 07h 427 ppm 77h: SE 00-10 Slope 1404 ppm 17h 6A/6Bh: Full 40 0F2Dh 24.28125 mVhr: 78/79h: RSGAIN 041Fh 1.03 Recall & Read

The Device Units Sub Tab is read-only. It displays the actual hexadecimal values read from the DS2782 and displays the units that are stored in the device.

#### **MEMORY TAB** DS2782K File Registers Preferences Help Real Time Parameters Log Data Memory 00h-0Fh 10h-1Fh 20h-2Fh 30h-37h 60h-6Fh 70h-7Fh EEPROM Block 1 : 60h-7Fh Address Descripton <u>Address</u> **Descripton** AE 40 68h Control 60h 40h 27h RSNSP 69h Acc Bias 61h 00h 32h Aging Cap MSB 62h Full 40 MSB 6Ah 0Fh 0Fh Aging Cap LSB 63h Full 40 LSB 6Bh 2Dh 40h Charge Voltage 64h Full 3040 Slope 6Ch D5h 0Eh Charge Current 65h Full 2030 Slope 6Dh 20h 13h AE Voltage 66h Full 1020 Slope 6Eh A4h 33h AE Current 67h Full 0010 Slope 6Fh 2Ah 3Bh Read Write Recall Сору Permanently Lock EEPROM Block 1

The Memory Tab gives the user access to all 32 bytes of SRAM and all 56 bytes of EEPROM inside the DS2782. They are separated into 6 sub-tabs for convenience. Any value can be modified by clicking in that address' text box and typing a new value in hexadecimal format. The Write button will copy the entire block of data to the corresponding location inside the DS2782 (Scratchpad RAM on the EEPROM blocks). The Read button will update the entire block's text boxes with data from the DS2782 (Scratchpad RAM on the EEPROM blocks). Sub-tabs displaying any EEPROM data will also have Copy and Recall buttons to allow the user to transfer the data between Scratchpad and EEPROM memory internal to the DS2782. The Permanently Lock Block 0/1 buttons will permanently store the data currently located in that block's EEPROM. Warning – this data can never be changed once locked. Verify your data first by issuing a Recall and a Read.

G DATA TAB			
🕆 DS2782K			
<u>File R</u> egisters <u>P</u> referer	nces <u>H</u> elp		
Real Time	Parameters Y	Memory	Log Data
Voltage Current Ter	mperature Accumulated Charge	Log to File	
Filename:	c:\DS2782K_datalog	.txt	Log Data
			<u> </u>
			~
			2
Sampling Interval	1 Second 🗸		Clear Graphs

The Log Data tab allows the user to see the DS2782's real time measurements graphed over time. There are separate sub-tabs for voltage, current, temperature, and accumulated charge. Each graph displays the last 500 data points collected by the DS2782 EV kit software. The sampling interval can be adjusted from as fast as possible to 15 minutes and can be adjusted from the Sampling Interval Menu at the bottom of the window. The Clear Graphs button will clear all data from all four graphs, but does not reset the log to file function. When the Fastest sampling interval is selected, the graphs will not be updated, only the data logging is enabled.

The Log to File Sub Tab contains control information for storing all data to an ASCII file. The default filename is c:\DS2782K\_datalog.txt, but can be modified in the filename text field. The Log Data button toggles data logging off and on. Data will be stored at the same interval selected for updating the graphs in the tab-delimited format of

"Time<*tab*>Voltage<*tab*>Current<*tab*>AveCurrent<*tab*>Temperature<*tab*>ACR<*tab*>Full<*tab*>AE<*tab*> SE<*tab*> RAAC<*tab*> RAAC<*tab*> RSAC<*tab*> RSAC<*tab*> Status<*tab*> Scalar"

for easy import into a spreadsheet. The most recent 50 samples are displayed in the window for observation. Warning - The Log Data function overwrites previous file information. Data previously stored in the file will be lost.
