DS28C50 Evaluation Kit

Evaluates: DS28C50 and DS2477

General Description

The DS28C50 evaluation kit (EV kit) provides the hardware and software necessary to exercise the features of the DS28C50 and DS2477. The EV system consists of five DS28C50 and DS2477 devices in a 6-pin TDFN package, two DS9121BQ+ evaluation TDFN socket boards, and a DS9481P-300# USB-to-l²C/1-Wire[®] adapter. The evaluation software runs on Windows[®] 10 and Windows 7 operating systems. It provides a handy user interface to exercise the features of the DS28C50 and DS2477. Note that the evaluation software described herein is the lite version that is downloadable from Maxim's website. To request the full developer version, click the link at the top of the page.

Features

- Demonstrates the Features of the DS28C50 DeepCover[®] SHA3 I²C Authenticator
- Demonstrates the Features of the DS2477 DeepCover SHA3 Secure Coprocessor
- I²C Communication Is Logged to Aid Firmware Designers Understanding of DS28C50 and DS2477
- 1-Wire/I²C USB Adapter Creates a Virtual COM Port on Any PC
- Fully Compliant with USB Specification v2.0
- Software Runs on Windows 10 and Windows 7
- Convenient On-Board Test Points, TDFN Socket

EV Kit Contents

QTY	DESCRIPTION
5	DS28C50Q+ DeepCover SHA3 I ² C Authenticator

Quick Start

Required Equipment

This section includes a list of recommended equipment and instructions on how to set up the Windows-based PC for the evaluation software.

- DS9481P-300# USB to 1-Wire/I²C adapter (included)
- DS9121BQ+ TDFN socket board (two included)
- DS28C50Q+ (five devices included)
- DS2477Q+ (five devices included)
- USB Type A to Micro-USB Type B cable (included)
- PC with a Windows 10 or Windows 7 operating system and a spare USB 2.0 or higher port
- Download DS28C50 EV kit software (lite version) or request full DS28C50 EV kit developer software.

Note: In the following sections, software-related items are identified by **bolding**. Text in bold refers to items directly from the EV kit software. Text in **bold and underlined** refers to items from the Windows operating system.

Ordering Information appears at end of data sheet.

Evaluates: DS28C50 and DS2477

Hardware Setup and Driver Installation Quick Start

The following steps were performed on a Windows 10 PC to set up the DS28C50 EV kit hardware/software:

- 1) Obtain and unpack the **DS28C50EVkit_Lite.zip file**, or the latest version.
- 2) Unplug any Maxim adapters before installing software.
- The DS9481P-300# driver is required to communicate through the USB through a virtual COM port. If DS9481 device driver is not installed:
 - a) Open folder DS9481_driver installer (Figure 1).
 - b) Run dpinst.exe (Figure 2).
 - c) Click <u>Next</u> on the Device Driver Installation Wizard window (Figure 3).
 - d) Click **<u>Finish</u>** on the Device Driver Installation Wizard window (Figure 4).
- 4) Plug in the DS9481 adapter.

- 7) Plug the DS9481P-300# into the PC with one or both DS9121BQ+ socket boards by doing the following:
 a) (Optional—Perform only if using the coproces-
 - (Optional—Perform only if using the coprocessor): Open the 1st socket and insert a DS2477 into one of the cavities, as shown in <u>Figure 7</u>.
 Note: The plus (+) must be oriented in the bottom left corner of the socket.

- b) Open the 2nd socket and insert a DS28C50 into the cavity, per the same orientation shown in <u>Figure 7</u>, with the plus (+) oriented in the bottom left corner of the socket.
- c) Close both burn-in sockets.

Figure 7. DS28C50 and DS2477 Orientation in Burn-In Socket

Figure 8. DS9481 Connected to DS28C50

- d) Connect the 1st DS9121BQ J2, 6-pin male plug, into the DS9481P-300#, 6-pin female socket per Figure 9.
- e) Connect the 2nd DS9121BQ J2, 6-pin male plug, into the 1st DS9121BQ J1, 6-pin female socket per Figure 9.
- For the DS9121BQ+ socket boards, configure jumpers JB3 to use SCL, JB4 to use SDA and JB1 to use 3.3 per <u>Figure 9</u>.
- g) Plug the DS28C50 EV kit, using a USB Type-A to Micro-USB Type-B cable, into the PC.

EV Kit Supported Functions

The DS28C50 EV kit program is designed as a usage example.

The software can be used to evaluate the DS28C50 independently or in conjunction with the DS2477.

To evaluate the DS28C50 by itself, use the hardware configuration shown in <u>Figure 8</u>. In this case, select DS28C50 from the **Device** drop-down menu. If **DS2477** is selected from the device menu, the coprocessor (DS2477) is used with the hardware configuration in Figure 9.

The GUI displays all the I²C sequences for each step performed to assist the firmware engineer. See <u>Table 1</u> and <u>Table 2</u> for descriptions of the limited functions provided in the lite version of the EV kit GUI for both the DS28C50 and DS2477, respectively. To request the full developer version of the program, click the link at the top of page 1.

Table 1. GUI Setup and Usage Flows Supported in DS28C50

FLOW*	DESCRIPTION
Detect Device	Reads page 7 to get ROMID and MANID.
Compute and Read Page Authentication	Creates authentication response based on given challenge. Results in a SHA-3 signature. CRPA sequence can be done on pages 0-5. Use in field to do an authentication with HMAC for a read page(s) of memory.
Read Status	Read page protections set on each page.
Read Memory	Read any page of memory without RP or EPH protection set.
Write Memory	Write data to any page (0-8) without WP, APH, or EPH protection set.

*Software supports all DS28C50 flows in Table 1.

Table 2. GUI Setup and Usage Flows Supported in DS2477

FLOW*	DESCRIPTION
Detect DS2477	Reads page 7 to get ROMID and MANID.
Compute HMAC	Write the Master Secret, Bind Data, and Partial Secret and issue the Compute and Lock Secret Command to generate an HMAC.
Read Status	Read page protections set on each page.
Read Memory	Read any page of memory without RP or EPH protection set.
Write Memory	Write data to any page (0-8) without WP, APH, or EPH protection set.

*Software supports all DS2477 flows in Table 2.
