Quick Start

Required Equipment

- MAX14588 EV kit
- 36V DC power supply
- Multimeter
- USB-A male to USB-B male cable or 5V DC power supply

Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- 1) Verify that all jumpers are in their default positions.
- 2) Connect the USB cable to J1 from a computer or connect a 5V DC power supply to TP3.
- 3) Verify that LED1 is on.
- 4) Connect a 20V DC power supply to IN. Verify that OUT is 20V.
- 5) Increase voltage on the DC power supply and verify that the OUT voltage goes down and LED2 is on when input reaches approximately 33V.
- 6) Decrease voltage on the DC power supply and verify that OUT goes back and LED2 is off when the input reaches approximately 32V.

LED1	POWER	LED1 is on when the VBUS/5V supply for the logic pins is powered.
LED2	FLAG	LED2 is on when FLAG is asserted.

Detailed Description of Hardware

The MAX14588 EV kit is a fully assembled and tested circuit board that demonstrates the MAX14588 1A adjustable overcurrent and overvoltage protector IC in a 16-pin surface-mount TQFN-EP package.

Using jumper JU1, the EV kit circuit can be configured to evaluate different current-limit thresholds with a different resistor on SETI. Using jumpers JU3–JU5, the EV kit circuit can be configured to evaluate the internal OVLO/UVLO threshold or external threshold using a resistor-divider. Using jumpers JU14 and JU15, the EV kit circuit can be configured to evaluate different current-limit types (autoretry, latching, and continuous). The EV kit also features LEDs to indicate the power for logic pins and FLAG status.

Current-Limit Threshold

The EV kit features a jumper (JU1) to select current-limit threshold. Install a jumper as shown in Table 2 to change the current-limit threshold.

Use the following equation to calculate the current limit:

$$R_{SETI} (k\Omega) = \frac{6100}{I_{LIM} (mA)}$$

UVLO/OVLO Threshold

Use jumpers JU3–JU5 to select UVLO and OVLO threshold. See Table 3 for jumper settings.

Table 2. Current-Limit Threshold (JU1)

JUMPER	SHUNT POSITION	DESCRIPTION
JU1	1-2*	Current limit 0.15A
	3-4	Current limit 0.5A
	5-6	Current limit 0.98A
	7-8	Current limit adjustable

*Default position.

Table 3. UVLO/OVLO Threshold (JU3–JU5)

JUMPER	SHUNT POSITION	DESCRIPTION
JU3	Installed*	UVLO connected to ground. Internal UVLO threshold is selected.
	Not installed	UVLO not connected to ground. Install JU5 to use external resistors to set UVLO threshold.
JU4	Installed*	OVLO connected to ground. Internal OVLO threshold is selected.
	Not installed	OVLO not connected to ground. Install JU5 to use external resistors to set OVLO threshold.
JU5	Installed	Use external resistors to set the OVLO/UVLO threshold.
	Not installed*	Not using external resistors to set the OVLO/UVLO threshold.

*Default position.

Switch Control

The EV kit features two jumpers (JU6, JU8) to enable or disable the switch. See Table 4 for jumper settings.

Reverse-Current Block Enable

Use jumper JU9 to enable or disable the reverse-current flow protection. The reverse-current block is enabled when RIEN is logic-high. See Table 6 for jumper settings.

Current-Limit Type Select

The EV kit features jumpers JU12, JU14, JU15 to select different current-limit type and sampled time. See Table 7 for jumper settings.
