

MAX17610 Evaluation Kit

Evaluates: MAX17610 – 4.5V to 60V, 1A, Reverse-Voltage Protector with Forward Current Limit

General Description

The MAX17610 evaluation kit (EV kit) is a fully assembled and tested circuit board that demonstrates the MAX17610 4.5V to 60V, 1A, reverse-voltage protector with forward current-limit in a 12-pin TDFN-EP package. The EV kit can be configured to demonstrate different current-limit types, and different current-limit thresholds.

Features

- 4.5V to 60V Operating-Voltage Range
- Features a TVS Diode across the Input and Schottky Diode across the Output Terminals
- Evaluates Three Current-Limit Types, and Current-Limit Threshold
- Internal UVLO set to 4V
- Jumper-Configurable Current-Limit (Selected as 0.1A by default)
- Current-Limit Mode Set To Autoretry by default
- Proven PCB Layout
- Fully Assembled and Tested

Ordering Information appears at end of data sheet.

Quick Start

Recommended Equipment

- MAX17610 EV kit
- 60V DC power supply
- Multimeters
- Adjustable load (0A to 1.5A)
- USB-A male to USB-B male cable or 5V DC power supply

Equipment Setup and Test Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation.

Caution: Do not turn on the power supply until all connections are completed.

- 1) Verify that all jumpers are in their default positions.
- 2) Connect the USB cable to J1 from a computer or connect a 5V-DC power supply to TP3.
- 3) Verify that LED1 is on.
- 4) Set the 60V DC power supply to 5V and connect to IN (J2/TP6). Verify that OUT (J3/TP8) is 5V.
- 5) Set the DC power-supply voltage to 24V and connect the adjustable load between OUT and GND terminals and a multimeter in series to measure the current. Gradually increase the load current and verify that the OUT goes down and FWD goes low when the load current increases above 0.1A.
- 6) The jumper JU1 can be configured to change the current limit as given in [Table 2](#). Verify various current limit operations by repeating step 5.

CAUTION: When applying a negative input to V_{IN} , the negative input test should be performed when the output capacitors are fully discharged and V_{BUS} is not supplied.

MAX17610 Evaluation Kit

Evaluates: MAX17610 – 4.5V to 60V, 1A,
Reverse-Voltage Protector
with Forward Current Limit

Detailed Description

The EV kit circuit can be configured to evaluate the overcurrent threshold by external resistors connected to the SETI pin and is jumper-configurable through jumper JU1. Using jumper JU4, the EV kit circuit can be configured to evaluate different current limit types (Autoretry, Continuous, and Latch-off). LED1 on the EV kit indicates availability of logic power for annunciation signals ($\overline{\text{FWD}}$ and $\overline{\text{REV}}$) and EN.

The EV kit provides on-board output capacitors to enable a demonstration of the MAX17610 protection features.

Input-Power Supply

The EV kit is powered by a user-supplied 4.5V to 60V

power supply connected between J2/TP6 (INPUT POWER) and GND.

Enable

To enable the device, connect a USB-A male connector from the computer to the USB-B female connector, J1, or an external 5V supply to TP3 and GND. This provides 5V to V_{BUS} and to the EN pin (JU5 connects V_{BUS} to EN by default). Choose the JU5 setting to enable or disable operation of the MAX17610 (see [Table 1](#)).

Current-Limit Threshold

The EV kit features a jumper (JU1) to select the current-limit threshold. Install a jumper as shown in [Table 2](#) to change the current-limit threshold.

Table 1. Enable (JU5)

JUMPER	SHUNT POSITION	DESCRIPTION	MAX17610 STATUS
JU5	1-2*	EN pin connected to V_{BUS}	ON
	2-3	EN pin connected to GND	OFF
	Open	EN pin floating	ON

*Default position.

Table 2. Current-Limit Threshold (JU1)

JUMPER	SHUNT POSITION	DESCRIPTION
JU1	1-2*	Current limit 0.1A
	3-4	Current limit 0.5A
	5-6	Current limit 1.0A
	7-8	Current limit adjustable

*Default position.

Current-Limit Type Select

The EV kit features jumper JU4 to select different current-limit responses. See [Table 3](#) for jumper settings.

Output-Load Capacitor

Use JU6 to connect the OUT pins to the OUT test point (TP8). Use jumper JU7 to connect output to 330μF capacitors. See [Table 4](#) for jumper settings

Table 3. Current-Limit Type Select (JU4)

JUMPER	SHUNT POSITION	DESCRIPTION
JU4	1-2	Latch-off
	2-3	Continuous
	Open*	Autoretry

*Default position.

Table 4. Output Load Capacitor (JU7)

JUMPER	SHUNT POSITION	DESCRIPTION
JU7	Installed	OUT connected to C4 and C5.
	Not installed*	OUT not connected to C4 and C5.

*Default position.
