

## MAX6078 Evaluation Kit

Evaluates: MAX6078A

### General Description

The MAX6078 evaluation kit (EV kit) is a fully assembled and tested circuit board for evaluating the MAX6078 family of low-power, low-noise, low-drift voltage references. The EV kit features footprints for both 6-bump WLP and 8-pin TDFN-EP surface-mount packages to evaluate any part in the reference family. These references operate from a single 2.3V to 5.5V supply and provide output options of 1.25V, 2.048V, 2.5V, 3.0V, 3.3V, 4.096V, and 5.0V.

The EV kit comes with a 6-bump WLP, 2.5V output (MAX6078AMWT25+) installed on the U1 footprint, while the TDFN-EP U2 (MAX6078AMTA25+) is a future product. This EV kit can also be used to evaluate any devices in the MAX6078 family.

### Features

- 2.3V to 5.5V Input Supply Range
- Output Options: 1.25V, 2.048V, 2.5V, 3.0V, 3.3V, 4.096V, and 5.0V.
- Proven PCB Layout
- Fully Assembled and Tested
- Evaluate any Devices of the MAX6078 Family

Ordering Information appears at end of data sheet.

### MAX6078 EV Kit Photo

## Quick Start

### Required Equipment

- MAX6078 EV kit
- +5V DC Power supply
- Voltmeter

### Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- 1) Verify that jumpers J1, J2, J3, and J4 are in their default position, as shown in [Table 1](#) and [Table 2](#).
- 2) **To evaluate U1:** set the DC power supply to +5V. Connect the positive terminal to the IN1 test point and the negative terminal to GND test point.
- 3) Connect the voltmeter between OUTF1 and GND test point.
- 4) Turn on the DC power supply.
- 5) Verify that the voltmeter displays  $V_{OUTF1} = 2.5V$ .
- 6) **To evaluate U2:** repeat step 2 to step 5 above for the U2 section. U2 (MAX6078AMTA25+) is a future product.

**Table 1. Jumper Description for U1**

JUMPER	SHUNT POSITION	DESCRIPTION
J1	2-1	Connect EN1 to GND to Place U1 in Shutdown Mode (U1)
	2-3*	Connect EN1 to IN1 for Normal Operation (U1)
J2	Installed	Connect C3 to NR Input (U1) for Output Noise Reduction
	Not installed*	C3 not connected to NR Input (U1)

\*Default position.

## General Description of Hardware

The MAX6078 EV kit demonstrates the MAX6078 family of very low-power, low-noise, low-drift voltage references in both available footprints: a 6-bump WLP and an 8-pin TDFN-EP package. The EV kit requires an input supply voltage range from 2.3V to +5.5V at the IN\_ pin for normal operation.

### EN Input

Drive the EN\_ pin high or connect to IN\_ to enable the MAX6078. Drive the EN\_ pin low or connect it to ground to disable the device. J1 (U1) and J3 (U2) are used for enabling or disabling the devices.

### Noise Reduction (NR) Input

The MAX6078 EV kit has jumpers available for evaluating the MAX6078's noise reduction feature. Install the jumper J2 (U1) and J4 (U2) to connect an external capacitor to the noise reduction input pins (NR) to use this feature.

**Table 2. Jumper Description for U2**

JUMPER	SHUNT POSITION	DESCRIPTION
J3	2-1	Connect EN2 to GND to Place U2 in Shutdown Mode (U2)
	2-3*	Connect EN2 to IN2 for Normal Operation (U2)
J4	Installed	Connect C8 to NR Input (U2) for Output Noise Reduction
	Not installed*	C8 not connected to NR Input (U2)

\*Default position.
