

MAXIM

MAX889S Evaluation Kit

Evaluates: MAX889

General Description

The MAX889 IC is an inverting charge pump that delivers a regulated negative output voltage at loads up to 200mA. The device operates from an input of +2.7V to +5.5V to produce a user-adjustable, regulated output of -2.5V to $-V_{IN}$.

The MAX889S evaluation kit (EV kit) is a fully assembled and tested surface-mount board. The board is set up to provide a -3.3V output from a +5.0V input supply. The EV kit is shipped with a MAX889S (1MHz switching frequency) installed. The board may also be used to evaluate the MAX889R (500kHz) or the MAX889T (2MHz). To do so, request a free sample of the MAX889RESA or MAX889TESA, and refer to the MAX889 data sheet for the appropriate capacitor values.

Component List

DESIGNATION	QTY	DESCRIPTION
C1, C3	2	10 μ F, 6.3V X5R ceramic capacitors Taiyo Yuden JMK316BJ106ML Murata GRM42-6X5R106K6.3
C2	1	2.2 μ F, 10V X5R ceramic capacitor Taiyo Yuden LMK212BJ225MG
JU1	1	3-pin jumper
JU2, JU3	2	2-pin jumpers
R1	1	49.9k Ω \pm 1% resistor
R2	1	33.2k Ω \pm 1% resistor
U1	1	MAX889SESA
None	1	MAX889S EV kit data sheet
None	1	MAX889 IC data sheet
None	3	Shunts

Component Suppliers

SUPPLIER	PHONE	FAX
Murata	814-237-1431	814-238-0490
Taiyo Yuden	408-573-4150	408-573-4159

Note: Please indicate that you are using the MAX889S when contacting these suppliers.

Features

- ◆ +2.7V to +5.5V Input Range
- ◆ Uses One 2.2 μ F and Two 10 μ F Ceramic Capacitors
- ◆ Output Adjustable from -2.5V to $-V_{IN}$
- ◆ 200mA Output Current
- ◆ 1MHz Switching Frequency
- ◆ Fully Assembled and Tested Surface-Mount Board

Ordering Information

PART	TEMP. RANGE	IC PACKAGE
MAX889SEVKIT	0°C to +70°C	8 SO

Quick Start

The MAX889S EV kit is fully assembled and tested. Follow the steps below to verify board operation. **Do not turn on the power supply until all connections are completed:**

- 1) Connect a voltmeter and the load to the VOUT pad.
- 2) Place the shunts in the following positions: JU1 1-2, JU2 closed, JU3 closed.
- 3) Connect a +5.0V supply to the pad labeled VIN. Connect the ground lead to the pad labeled GND.
- 4) Turn on the power and verify that the output is 3.3V.

MAX889S Evaluation Kit

Detailed Description

Jumper Selection

The MAX889 can be placed in shutdown mode, using jumper JU1. See Table 1 for jumper settings.

Jumper JU2 connects VIN to the voltage-divider that sets the output voltage. To use a voltage source other than VIN as the reference, open JU2, and connect the reference source to the pad labeled VREF.

The MAX889 can be placed into free-run mode (unregulated, VOUT = -VIN) by removing the shunt on JU3 and installing a shunt on JU2.

Output Voltage Adjustment

The MAX889S EV kit is shipped with the resistor-divider selected for an output of -3.3V and an input of +5.0V. Output voltages other than -3.3V can be set one of two ways:

- 1) Change the resistor-divider formed by R1 and R2. Use the following equation to determine the resistor values:

$$R2 = -(VOUT / VREF) R1$$

(The current through R1 and R2 should be at least 30µA.)

- 2) Remove the shunt from JU2 and apply a voltage to the VREF pad. Use the following equation to determine the voltage for VREF:

$$VREF = -(R1 / R2) VOUT$$

Capacitor Selection

Use capacitors with a low effective series resistance (ESR), such as ceramic or surface-mount chip tantalum types. Refer to the MAX889 data sheet for more information.

Table 1. Jumper Functions

JUMPER	JUMPER POSITION	FUNCTION
JU1	1-2*	$\overline{\text{SHDN}}$ = High, MAX889 enabled
	2-3	$\overline{\text{SHDN}}$ = Low, MAX889 disabled
	Open	Drive $\overline{\text{SHDN}}$ pad with an external signal
JU2	Open	Drive VREF pad with an external voltage to set the output voltage
	Closed*	VIN is used to set the output voltage
JU3	Open	Used to place the MAX889 into free-run mode (JU2 must be closed)
	Closed*	Output voltage is set by resistor-divider and VIN or VREF

*Default position
