

MAXM38643A EMGA Evaluation Kit

Evaluates: MAXM38643

General Description

The MAXM38643A EMGA evaluation kit (EV kit) evaluates the MAXM38643A IC in an EMGA package. The MAXM38643A is an ultra-low quiescent current step-down DC-DC converter. The EV kit operates over an input range of 1.8V to 5.5V and provides resistor-configurable output voltages from 0.7V to 3.3V. The EV kit delivers up to 600mA of current. The EV kit comes with the MAXM38643AEMB+ installed.

Features and Benefits

- Evaluates the MAXM38643A IC in a (2.1mm x 2.6mm) 10-pin EMGA Package
- 1.8V to 5.5V Input Range
- 0.7V to 3.3V Resistor-Configurable Output Voltages
- Up to 600mA Output Current
- Proven 2-Layer 1oz Copper PCB Layout
- Demonstrates Compact Solution Size
- Fully Assembled and Tested

Quick Start

Required Equipment

- MAXM38643A EMGA EV kit
- 5.5V, 3A DC power supply
- Electronic load capable of 600mA
- Digital voltmeter (DVM)

Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation.

Caution: Do not turn on power supply until all connections are completed.

1. Verify that jumpers JU1 and JU2 are in their default positions, as shown in Tables 1 and 2.
2. Connect the 5.5V power supply between the IN and nearest GND terminal posts.
3. Connect the 600mA electronic load between the OUT and nearest GND terminal posts.
4. Connect the DVM between the OUT and nearest GND terminal posts.
5. Turn on the power supply.
6. Enable the electronic load.
7. Verify that the voltage at the OUT terminal post is approximately 1.0V.

Detailed Description of Hardware

The MAXM38643A EMGA EV kit evaluates the MAXM38643A IC in an EMGA package. The MAXM38643A IC is an ultra-low quiescent current step-down DC-DC converter. The EV kit operates over an input range of 1.8V to 5.5V and provides resistor-configurable output voltages from 0.7V to 3.3V. The EV kit delivers up to 600mA of current. The EV kit comes with the MAXM38643AEMB+ installed.

Table 1. EN (JU1)

SHUNT POSITION	DESCRIPTION
1-2*	EV Kit Enabled
1-3	EV Kit Controlled by External (TTL) Source Connected to EXT_EN
1-4	EV Kit Disabled

Table 2. RSEL (JU2)

SHUNT POSITION	DESCRIPTION
1-2*	OUT = 1.0V
1-3	OUT = 1.5V
1-4	OUT = 1.8V
1-5	OUT = 3.3V
OPEN	OUT = 2.5V

*Default Position

EN

The MAXM38643A EMGA EV kit provides a jumper JU1 to enable or disable the MAXM38643A. See Table 1 for jumper JU1 settings.

RSEL

The MAXM38643A EMGA EV kit provides a jumper JU2 to configure the RSEL pin of the MAXM38643A. See Table 2 for jumper JU2 settings.
