

MAX20336/MAX20337

Ultra-Small, Low- R_{ON} , Beyond-the-Rails DPST/SPDT Analog Switches

General Description

The MAX20336/MAX20337 ultra-small, low-on-resistance (R_{ON}) double-pole/single throw (DPST) and single-pole/double-throw (SPDT) analog switches feature Beyond-the-Rails™ capability that allows signals from -5.5V to +5.5V to pass without distortion, even when the power supply is below the signal range. The low on-resistance (0.19Ω) also makes the devices ideal for low-distortion switching applications, such as audio or video.

The MAX20336/MAX20337 are fully specified to operate from a single +1.6V to +5.5V power supply. Because of the low supply current requirement, V_{CCEN} can be provided by a GPIO. When power is not applied, the switches go to a high-impedance mode and all analog signal ports can withstand signals from -5.5V to +5.5V.

The MAX20336/MAX20337 are available in a 1.308mm x 0.828mm, 0.4mm pitch, 6-bump wafer-level package (WLP) and 1.25mm x 1.75mm 6-pin FC2QFN package, and operate over the -40°C to +85°C extended temperature range.

Applications

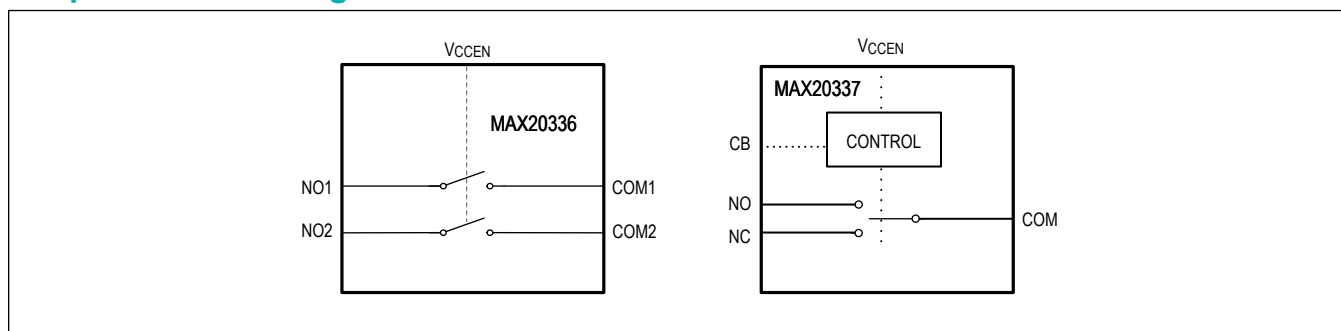

- Cell phone
- Tablet
- Portable Audio/Video Equipment
- Portable Navigation Devices

Benefits and Features

- Distortion-Free Beyond-the-Rails Signaling
 - Negative Voltage Audio and Video Signal Capable
 - -5.5V to +5.5V Analog Signal Range Independent of V_{CCEN}
 - On-Resistance 0.19Ω (typ)
 - +1.6V to +5.5V Single-Supply Range
 - Total Harmonic Distortion Plus Noise -114dB (typ)
 - On-Resistance Flatness 0.0001Ω (typ)
- Low Supply Current 65μA/70μA (typ) at 1.6V
 - Can be Powered by GPIO
 - High-Impedance Mode when V_{CCEN} Not Applied
- ESD Protection on COM_, NO_, NC
 - ±30kV Human Body Model
 - ±7kV IEC 61000-4-2 Air Gap
 - ±8kV IEC 61000-4-2 Contact
- Design Flexibility
 - 6-Bump WLP (1.308mm x 0.828mm) Package
 - 6-Pin FC2QFN (1.25mm x 1.75mm) Package
 - -40°C to +85°C Operating Temperature Range

Ordering Information appears at end of data sheet.

Simplified Block Diagram

Absolute Maximum Ratings

V_{CCEN} , CB to GND	-0.3V to +6V	FC2QFN (derate 5.83mW/°C above +70°C).....	466.2mW
NO_{-} , COM_{-} , NC to GND.....	-6V to +6V	Operating Temperature Range	-40°C to +85°C
Continuous Current NO_{-} , COM_{-} , NC	± 500 mA	Junction Temperature	+150°C
Peak Current NO_{-} , COM_{-} , NC (50% duty cycle, 10ms pulse).....	± 850 mA	Storage Temperature Range	-65°C to +150°C
Continuous Power Dissipation ($T_A = +70^{\circ}\text{C}$) WLP (derate 10.51mW/°C above +70°C)	840.8mW	Soldering Temperature (reflow)	+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Information

6 BUMP WLP (MAX20336)

Package Code	N60K1+1
Outline Number	21-100308
Land Pattern Number	Refer to Application Note 1891
THERMAL RESISTANCE, FOUR-LAYER BOARD	
Junction to Ambient (θ_{JA})	95.15°C/W

6 BUMP WLP (MAX20337)

Package Code	N60K1+2
Outline Number	21-100311
Land Pattern Number	Refer to Application Note 1891
THERMAL RESISTANCE, FOUR-LAYER BOARD	
Junction to Ambient (θ_{JA})	95.15°C/W

6 FC2QFN (MAX20336/MAX20337)

Package Code	F61A1F+1
Outline Number	21-100313
Land Pattern Number	90-100167
THERMAL RESISTANCE, FOUR-LAYER BOARD	
Junction to Ambient (θ_{JA})	171.6 °C/W
Junction to Ambient (θ_{JC})	58.7 °C/W

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Electrical Characteristics

(V_{CCEN} = +1.6V to +5.5V, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V_{CCEN} = +2.5V, T_A = +25°C, unless otherwise noted.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS		MIN	TYP	MAX	UNITS
POWER SUPPLY							
Power-Supply Range	V _{CCEN}			1.6		5.5	V

B2	2	-	-	COM1	Common Terminal for Switch 1
-	-	B2	2	CB	Digital Control Input. Drive CB low to connect COM to NC. Drive CB high to connect COM to NO.
B3	3	B3	3	GND	Ground

Detailed Description

The MAX20336/MAX20337 are ultra-small, low on-resistance, high ESD-protected DPST/SPDT switches that operate from a +1.6V to +5.5V supply, and are designed to pass analog signals, such as AC-biased or DC-biased audio and video signals. These switches feature the low on-resistance (R_{ON}) necessary for high-performance switching applications. The Beyond-the-Rails signal capability of the MAX20336/MAX20337 allows signals below ground and above V_{CCEN} to pass without distortion.

Analog Signal Levels

The MAX20336/MAX20337 are bidirectional, allowing NO_, NC and COM_ to be configured as either inputs or outputs. The topology of the switches allows the signal to drop below ground without the need of an external negative voltage supply.

Digital Control Input

The MAX20336 combines enable and supply pins. The switches are on when the device is powered. Connect V_{CCEN} to GND to turn off the switches.

The MAX20337 has a control bit (CB). COM is connected to NC when CB is low, and connected to NO when CB is high. Connect V_{CCEN} to GND to turn off the switches.

Applications Information

Extended ESD Protection

ESD-protection structures are incorporated on all pins to protect against electrostatic discharges up to $\pm 2\text{kV}$ (HBM) encountered during handling and assembly. COM_, NC and NO_ are further protected against ESD up to $\pm 30\text{kV}$ (HBM), $\pm 7\text{kV}$ (Air-Gap Discharge), and $\pm 8\text{kV}$ (Contact Discharge) without damage. The ESD structures withstand high ESD both in normal operation and when the device is powered down. After an ESD event, the devices continue to function without latchup.

ESD Test Conditions

ESD performance depends on a variety of conditions. Contact Maxim for a reliability report that documents test methodology and test results.

Human Body Model

[Figure 5](#) shows the Human Body Model. [Figure 6](#) shows the current waveform it generates when discharged into a low impedance. This model consists of a 100pF capacitor charged to the ESD voltage of interest that is then discharged into the device through a $1.5\text{k}\Omega$ resistor.

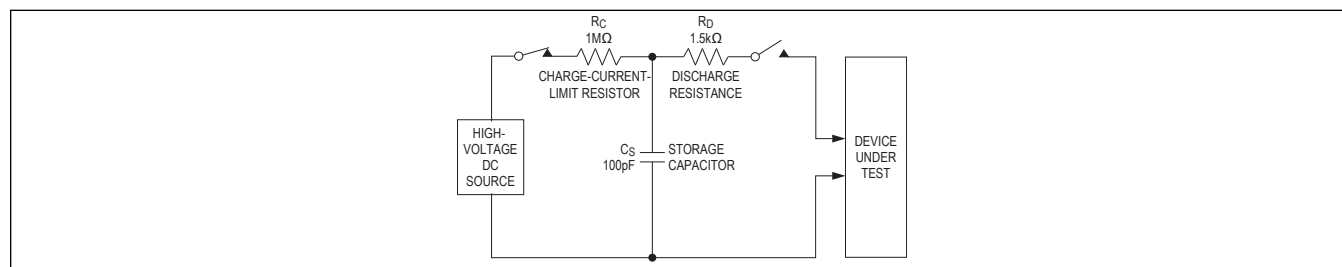

Figure 5. Human Body ESD Test Model

Figure 6. Human Body Current Waveform

IEC 61000-4-2

The IEC 61000-4-2 standard covers ESD testing and performance of finished equipment. It does not specifically refer to integrated circuits. The major difference between tests done using the HBM and IEC 61000-4-2 is higher peak current in IEC 61000-4-2, because series resistance is lower in the IEC 61000-4-2 model. Hence, the ESD withstand voltage measured to IEC 61000-4-2 is generally lower than that measured using the HBM. [Figure 7](#) shows the IEC 61000-4-2 model and [Figure 8](#) shows the current waveform for the $\pm 8\text{kV}$, IEC 61000-4-2, Level 4, ESD Contact-Discharge Method.
