

# TMCM-3230 Hardware Manual

Hardware Version V1.30 | Document Revision V1.20 • 2019-MAR-01

The TMCM-3230 is a compact and easy to use 3-axes stepper motor controller and driver unit for embedded applications. It offers CAN bus, UART and USB interfaces for communication and supports stand-alone operation, also. The TMCM-3230 features **stealthChop™** for absolute silent motor control, **spreadCycle™** for high speed stepper motor commutation, a fully integrated hardware motion controller with **sixPoint™** motion ramps, as well as **stallGuard2™** and **coolStep™**.

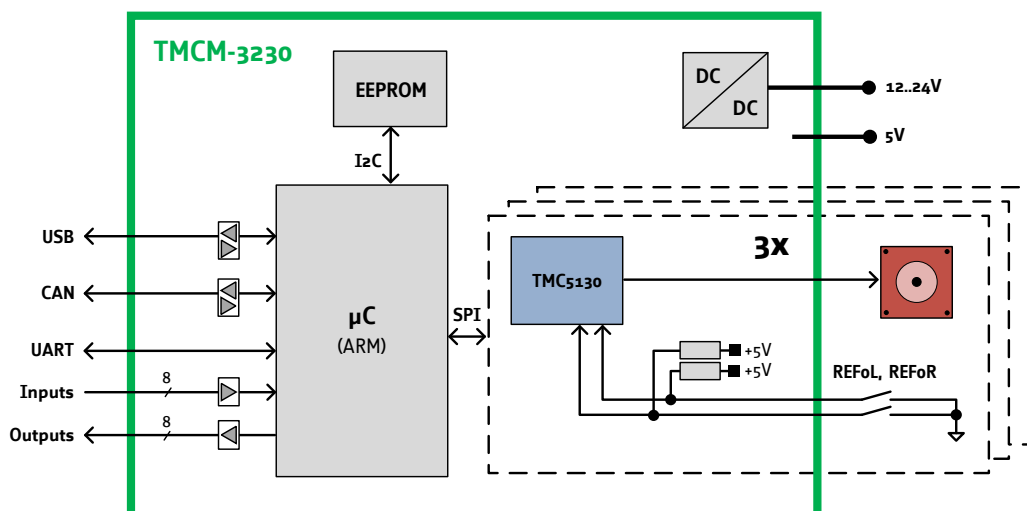

## Features

- 3-axes stepper motor controller / driver
- Supply Voltage +12 to +24V DC (9V .. 28.5V max.)
- CAN, UART and USB interfaces
- TMCL or CANopen protocol
- Integrated **sixPoint™** ramp motion controller
- **stealthChop™** silent PWM mode
- **spreadCycle™** smart mixed decay
- **stallGuard2™** load detection
- **coolStep™** autom. current scaling

## Applications

- Laboratory Automation
- Manufacturing
- Semiconductor Handling
- Robotics
- Factory Automation
- Test & Measurement
- Life Science
- Biotechnology
- Liquid Handling

# 1 Features

The TMCM-3230 is a compact three axes 2-phase stepper motor controller and driver module. It provides a complete motion control solution at a very small size for embedded applications. The board can be easily plugged into a customized baseboard offering a single 68pin connector.

Host communication is possible via the serial UART interface (e.g. using a standard RS232 or RS485 level shifter) or via CAN (CAN controller is already integrated on board). An additional USB interface (Micro-USB) may be used for firmware updates, download of TMCL programs or setting of parameters - either in system or stand-alone without any further connections.

The TMCM-3230 is supported by the integrated development environment TMCL-IDE v3.0. It supports stand-alone TMCL program execution (on-board EEPROM) and remote controlled operation.

The TMCM-3230 has been designed with compatibility in mind with previous generation TMCM-343/TMCM-303 modules - keeping similar mechanical and electrical characteristics (drop-in replacement for many applications) while offering advanced features.

## 1.1 General Features

### Main Characteristics

- Supply Voltage +12V to +24V DC nom. (9V..28.5V abs. max.)
- 1A RMS phase current (approx. 1.4A peak phase current)
- Up to 256 micro steps per full step
- Permanent onboard parameter storage (EEPROM)
- Advanced sixPoint™ ramp hardware motion controller (for each axis)
- Noiseless stealthChop™ chopper mode for slow to medium velocities
- High performance spreadCycle™ chopper mode
- High-precision sensorless load measurement with stallGuard2™
- Automatic current scaling algorithm coolStep™ to save energy and keep your drive cool

### I/Os

- 8 general purpose inputs (0..5V) - either analog or digital
- 8 general purpose outputs (+5V level)
- L+R reference switch inputs (for all three axes)
- Shutdown input to power-on/-off drivers
- Alarm output
- Reset input

### Communication Interfaces

- Standard CAN Bus Interface for control and configuration
- UART interface supporting e.g. RS232, RS422 or RS485 with external transceiver
- SPI master interface

## 1.2 TRINAMIC's Unique Features

### 1.2.1 stealthChop™

stealthChop is an extremely quiet mode of operation for low and medium velocities. It is based on a voltage mode PWM. During standstill and at low velocities, the motor is absolutely noiseless. Thus, stealthChop operated stepper motor applications are very suitable for indoor or home use. The motor operates absolutely free of vibration at low velocities. With stealthChop, the motor current is applied by driving a certain effective voltage into the coil, using a voltage mode PWM. There are no more configurations required except for the regulation of the PWM voltage to yield the motor target current.

Figure 1: Motor coil sine wave current using stealthChop (measured with current probe)

### 1.2.2 spreadCycle™

The spreadCycle chopper is a high-precision, hysteresis-based, and simple to use chopper mode, which automatically determines the optimum length for the fast-decay phase. Several parameters are available to optimize the chopper to the application. spreadCycle offers optimal zero crossing performance compared to other current controlled chopper algorithms and thereby allows for highest smoothness. The true target current is powered into the motor coils.

Figure 2: spreadCycle principle

### 1.2.3 stallGuard2

stallGuard2 is a high-precision sensorless load measurement using the back EMF of the motor coils. It can be used for stall detection as well as other uses at loads below those which stall the motor. The

stallGuard2 measurement value changes linearly over a wide range of load, velocity, and current settings. At maximum motor load, the value reaches zero or is near zero. This is the most energy-efficient point of operation for the motor.

Figure 3: stallGuard2 Load Measurement as a Function of Load

#### 1.2.4 coolStep

coolStep is a load-adaptive automatic current scaling based on the load measurement via stallGuard2. coolStep adapts the required current to the load. Energy consumption can be reduced by as much as 75%. coolStep allows substantial energy savings, especially for motors which see varying loads or operate at a high duty cycle. Because a stepper motor application needs to work with a torque reserve of 30% to 50%, even a constant-load application allows significant energy savings because coolStep automatically enables torque reserve when required. Reducing power consumption keeps the system cooler, increases motor life, and allows for cost reduction.

Figure 4: Energy Efficiency Example with coolStep

#### 1.2.5 sixPoint Motion Controller

TRINAMIC's sixPoint motion controller is a new type of ramp generator, which offers faster machine operation compared to the classical linear acceleration ramps. The sixPoint ramp generator allows adapting

the acceleration ramps to the torque curves of a stepper motor and uses two different acceleration settings each for the acceleration phase and for the deceleration phase

Figure 5: Typical motion profile with TRINAMIC's sixPoint motion controller

## 2 Order Codes

Order Code	Description	Size (LxWxH)
TMCM-3230-TMCL	3-axes stepper motor controller / driver +24V / 1A RMS TMCL firmware installed	80mm x 50mm x 6mm
TMCM-3230-CANopen	3-axes stepper motor controller / driver +24V / 1A RMS CANopen firmware installed	80mm x 50mm x 6mm

*Table 1: Order Codes*

## 3 Mechanical and Electrical Interfacing

### 3.1 TMC-3230 Dimensions

The dimensions of the controller/driver unit are approx. 80mm x 50mm. There are three mounting holes for M3 screws and two slots on each side for optional card holders.

Figure 6: TMC-3230 mechanical dimensions (all values in mm, (x/y))

## 4 Connectors and LEDs

### 4.1 Main Connector

The TMC3230 has been designed as plug-in module. It offers one 68pin connector with 2mm pitch for connection of supply (driver and optional +5V digital supply), communication interfaces (CAN, UART - e.g. RS232, RS422 or RS485 with external transceiver), up-to eight digital outputs (0..+5V), up-to eight analog or digital inputs (0..+5V), reference switch inputs for all three axes (may be used as Step/Direction inputs) and motor driver outputs for three axes.

Table 2: Main Connector Pin Assignment

**NOTICE**

Do not plug-in or remove TMCM-3230 during operation! Voltage spikes and / or partly connected supply pins might lead to permanent damage of the module.

## 4.2 USB Connector

The TMCM-3230 offers one Micro-USB connector. This connector is located at the upper end of the plug-in module. It has been integrated for quick and easy parameter setting and firmware updates of the module - either in-system or even while the main connector is un-plugged. The USB device interface (Full-speed) supports USB bus powered operation. During this mode the processor and the on-board non-volatile memory (EEPROM) are powered and firmware updates, download of TMCL programs and parameter setting is possible without any further connection - apart from USB. In addition, UART communication, the SPI interface, all general purpose inputs and outputs, Alarm output, the CAN interface and the dedicated Reset input are operational while motor driver outputs and motor controller / driver related REF / Step / Dir inputs are not operational.

In self powered mode when the TMCM-3230 is plugged into its mainboard and power via the 68pin connector is applied communication via USB is possible, also. In this configuration USB might be used as

an alternative to the other serial interfaces. Please note that the module might draw current via the USB connection in this mode, also.

Figure 8: TMCM-3230 USB Connector

### 4.3 CAN Connection

For remote control and communication with a host system the TMCM-3230 provides a CAN bus interface with on-board CAN transceiver. For proper operation the following items should be taken into account when setting up a CAN network:

**Bus Structure** The network topology should follow a bus structure as closely as possible. That is, the connection between each node and the bus itself should be as short as possible. Basically, it should be short compared to the length of the bus.

Figure 9: CAN Bus Structure

**Bus Termination** Especially for longer busses and/or multiple nodes connected to the bus and/or high communication speeds, the bus should be properly terminated at both ends. The TMCM-3230 does not integrate any termination resistor. Therefore, 120 Ohm termination resistors at both ends of the bus have to be added externally.

**Number of Nodes** The bus transceiver used on the TMCM-3230 (TJA1051) supports at least 100 nodes under optimum conditions. Practically achievable number of nodes per CAN bus highly depend on bus length (longer bus = less nodes) and communication speed (higher speed = less nodes).

## 4.4 LEDs

The TMCM-3230 offers two LEDs: one green and one red LED. Both LEDs are connected to the processor. Function of the LEDs depends on the firmware version / type of firmware (e.g. TMCL / CANopen). See figure 10 for the LED location.

Figure 10: TMCM-3230 Location of LEDs

Status LEDs with TMCL Firmware		
Green LED	Red LED	TMCL Firmware

On	On	Bootloader / firmware update mode.
Off	Off	Power Off

Table 3: Status LEDs with TMCL Firmware

## 5 Motor driver current

The on-board stepper motor driver operates current controlled. The driver current may be programmed in software with 32 effective current scaling steps (CS) in hardware.

*Explanation of different columns in table below:*

<b>Motor current setting in software (TMCL)</b>	These are the values for TMCL axis parameter 6 (motor run current) and 7 (motor standby current). They are used to set the run / standby current using the following TMCL commands:  SAP 6, 0, <value> // set run current SAP 7, 0, <value> // set standby current  (read-out value with GAP instead of SAP. Please see separate TMC3230 firmware manual for further information)
<b>Current scaling</b>	This is the effective current scaling in hardware. 32 different scaling steps are available in hardware.
<b>Motor current</b>	Resulting motor current based on motor current setting. Motor current is listed as peak (sine peak) value ( $I_{PEAK}$ ) and RMS-value ( $I_{RMS}$ ). For stepper motors rated current is usually listed as $I_{RMS}$ value.

Motor current setting in software (TMCL)	Current scaling step in hardware (CS)	Motor current $I_{PEAK}[A]$	Motor current $I_{RMS}[A]$
0..7	0	0.047	0.033
8..15	1	0.094	0.066
16..23	2	0.141	0.099
24..31	3	0.188	0.133
32..39	4	0.234	0.166
40..47	5	0.281	0.199
48..55	6	0.328	0.232
56..63	7	0.375	0.265
64..71	8	0.422	0.298
72..79	9	0.469	0.331
80..87	10	0.516	0.365
88..95	11	0.563	0.398
96..103	12	0.609	0.431
104..111	13	0.656	0.464
112..119	14	0.703	0.497
120..127	15	0.750	0.530
128..135	16	0.797	0.563
136..143	17	0.844	0.597

Motor current setting in software (TMCL)	Current scaling step in hardware (CS)	Motor current $I_{PEAK}[A]$	Motor current $I_{RMS}[A]$
144..151	18	0.891	0.630
152..159	19	0.938	0.663
160..167	20	0.984	0.696
168..175	21	1.031	0.729
176..183	22	1.078	0.762
184..191	23	1.125	0.795
192..199	24	1.172	0.829
200..207	25	1.219	0.862
208..215	26	1.266	0.895
216..223	27	1.313	0.928
224..231	28	1.359	0.961
232..239	29	1.406	0.994
240..247	30	1.453	1.028
248..255	31	1.500	1.061

In addition to the settings in the table the motor current may be switched off completely (free-wheeling) using axis parameter 204 (see TMC3230 firmware manual).

## 6 Functional Description

The TMC3230 contains the following main parts:

- 3x TMC5130 combined stepper motor controller and driver
- processor running the TMCL interpreter or the CANopen stack (depending on firmware version)
- non-volatile memory for parameter and TMCL program storage (EEPROM)
- Input and output level shifter / buffer
- USB interface (with micro-USB connector), CAN interface with on-board transceiver and UART interface supporting external RS232, RS422 or RS485 connections
- SPI master interface

Figure 11: Typical application scenario

## 7 Operational Ratings and Characteristics

### 7.1 Absolute Maximum Ratings

Parameter	Min	Max	Unit
DC Power supply voltage for operation	9	28.5	V
+5V DC input (optional)	4.8	5.2	V
Motor coil current / sine wave <b>peak</b>		1.4	A
Continuous motor current ( <b>RMS</b> )		1	A
Working / environmental temperature	-30 <sup>*)</sup>	+40 <sup>**)</sup>	° C

Table 5: Absolute Maximum Ratings

<sup>\*)</sup> limited by test equipment. Operation down to -40° C can be expected. Test included cold start at this temperature.

<sup>\*\*)</sup> constant air flow or heat sink (e.g. mounted to the backside of the pcb (Attention: please make sure to isolate heatsink from pcb)) may be required. All components are specified for operation up-to at least +85° C

#### NOTICE

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

### 7.2 Electrical Characteristics (Ambient Temperature 25° C)

Parameter	Symbol	Min	Typ	Max	Unit
DC Power supply voltage for operation	VDD	9	12..24	28	V
Motor coil current / sine wave <b>peak</b> (chopper regulated, adjustable in software)	I <sub>COIL peak</sub>	0		1.4	A
Continuous motor current ( <b>RMS</b> )	I <sub>COIL RMS</sub>	0		1.0	A
Power supply current	I <sub>DD</sub>		≪ I <sub>COIL</sub>	1.4 * I <sub>COIL</sub>	A

Table 6: Electrical Characteristics

### 7.3 I/O Ratings (Ambient Temperature 25° C)

Parameter	Symbol	Min	Typ	Max	Unit
Input voltage for general purpose inputs	V <sub>IN</sub>	0	0..5	5.5	V
Output voltage for general purpose outputs	V <sub>OUT</sub>	0	0..5	5.5	V

Table 7: I/O Ratings

## 7.4 Other Requirements

Specifications	Description or Value
Cooling	Free air
Working environment	Avoid dust, water, oil mist and corrosive gases, no condensation, no frosting
Working temperature	tbd

*Table 8: Other Requirements and Characteristics*

## 8 Abbreviations used in this Manual

Abbreviation	Description
CAN	Controller Area Network
COMM	Common Anode or common cathode
IDE	Integrated Development Environment
LED	Light Emmitting Diode
RMS	Root Mean Square value
TMCL	TRINAMIC Motion Control Language
TTL	Transistor Transistor Logic
UART	Universal Asynchronous Receiver Transmitter
USB	Universal Serial Bus

## 11 Supplemental Directives

### 11.1 Producer Information

### 11.2 Copyright

TRINAMIC owns the content of this user manual in its entirety, including but not limited to pictures, logos, trademarks, and resources. © Copyright 2019 TRINAMIC. All rights reserved. Electronically published by TRINAMIC, Germany.

Redistributions of source or derived format (for example, Portable Document Format or Hypertext Markup Language) must retain the above copyright notice, and the complete Datasheet User Manual documentation of this product including associated Application Notes; and a reference to other available product-related documentation.

### 11.3 Trademark Designations and Symbols

Trademark designations and symbols used in this documentation indicate that a product or feature is owned and registered as trademark and/or patent either by TRINAMIC or by other manufacturers, whose products are used or referred to in combination with TRINAMIC's products and TRINAMIC's product documentation.

This Hardware Manual is a non-commercial publication that seeks to provide concise scientific and technical user information to the target user. Thus, trademark designations and symbols are only entered in the Short Spec of this document that introduces the product at a quick glance. The trademark designation /symbol is also entered when the product or feature name occurs for the first time in the document. All trademarks and brand names used are property of their respective owners.

### 11.4 Target User

The documentation provided here, is for programmers and engineers only, who are equipped with the necessary skills and have been trained to work with this type of product.

The Target User knows how to responsibly make use of this product without causing harm to himself or others, and without causing damage to systems or devices, in which the user incorporates the product.

### 11.5 Disclaimer: Life Support Systems

TRINAMIC Motion Control GmbH & Co. KG does not authorize or warrant any of its products for use in life support systems, without the specific written consent of TRINAMIC Motion Control GmbH & Co. KG.

Life support systems are equipment intended to support or sustain life, and whose failure to perform, when properly used in accordance with instructions provided, can be reasonably expected to result in personal injury or death.

Information given in this document is believed to be accurate and reliable. However, no responsibility is assumed for the consequences of its use nor for any infringement of patents or other rights of third parties which may result from its use. Specifications are subject to change without notice.

### 11.6 Disclaimer: Intended Use

The data specified in this user manual is intended solely for the purpose of product description. No representations or warranties, either express or implied, of merchantability, fitness for a particular purpose

or of any other nature are made hereunder with respect to information/specification or the products to which information refers and no guarantee with respect to compliance to the intended use is given.

In particular, this also applies to the stated possible applications or areas of applications of the product. TRINAMIC products are not designed for and must not be used in connection with any applications where the failure of such products would reasonably be expected to result in significant personal injury or death (safety-Critical Applications) without TRINAMIC's specific written consent.

TRINAMIC products are not designed nor intended for use in military or aerospace applications or environments or in automotive applications unless specifically designated for such use by TRINAMIC. TRINAMIC conveys no patent, copyright, mask work right or other trade mark right to this product. TRINAMIC assumes no liability for any patent and/or other trade mark rights of a third party resulting from processing or handling of the product and/or any other use of the product.

## 11.7 Collateral Documents & Tools

This product documentation is related and/or associated with additional tool kits, firmware and other items, as provided on the product page at: [www.trinamic.com](http://www.trinamic.com).
