

MAXIM

MAX4108 Evaluation Kit

Evaluates: MAX4108/MAX4109

General Description

The MAX4108 evaluation kit (EV kit) simplifies evaluation of the MAX4108 high-speed amplifier. The EV kit circuit demonstrates the MAX4108 in the noninverting, unity-gain configuration.

The EV kit comes with the MAX4108 installed. To evaluate the MAX4109, simply order a free sample (MAX4109ESA), replace the MAX4108 with the MAX4109 on the EV board, and change the gain-setting resistors for the desired gain. The minimum closed-loop gain for the MAX4109 is +2V/V.

Features

- ♦ 400MHz Unity-Gain Bandwidth
- ♦ Optional Adjustable Gain
- ♦ Fully Assembled and Tested

Ordering Information

PART	TEMP. RANGE	BOARD TYPE
MAX4108EVKIT-SO	+25°C	Surface Mount

Note: To evaluate the MAX4109, request a MAX4109ESA free sample.

Component List

DESIGNATION	QTY	DESCRIPTION
U1	1	MAX4108ESA
C3, C6	2	10 μ F, 10V 20% tantalum capacitors AVX TAJB106M010 Sprague 293D106X0010B
C1, C2, C4, C5	4	0.1 μ F, 10% ceramic capacitors Vitraron VJ1206Y104KXX
R1, R2	2	49.9 Ω , 1% resistors
R _F	1	24 Ω , 5% resistor
IN, OUT	2	SMA connectors
None	1	MAX4108 PC board
None	1	MAX4108/MAX4109 data sheet

Component Suppliers

AVX Sprague Vishay/Vitramon	(803) 946-0690 (603) 224-1961 (203) 268-6261	(803) 626-3123 (603) 224-1430 (203) 452-5670

Quick Start

The MAX4108 EV kit is fully assembled and tested. Follow these steps to verify board operation. **Do not turn on the power supply until all connections are completed.**

- 1) The circuit requires supply voltages of ± 5 V. Connect ± 5 V supplies to the corresponding pads marked VCC and VEE. Connect the power-supply ground to the pad marked GND.
- 2) Apply a signal between +2.5V and -3.1V to the SMA connector marked IN.
- 3) Connect the output marked OUT to an oscilloscope through a terminated 50 Ω cable.
- 4) Turn on the power supply and verify the output signal on the oscilloscope.

Detailed Description

Voltage-Gain Adjustment

The MAX4108 gain can be adjusted with the following minor modifications to the EV board.

- 1) Referring to Table 1, select the feedback (R_F) and gain-setting (R_G) resistors for the desired gain.
- 2) Install R_F and R_G.

MAX4108 Evaluation Kit

Table 1. Gain-Set Resistors

GAIN	R _F (Ω)	R _G (Ω)	SMALL-SIGNAL BANDWIDTH (MHz)	DEVICE
1	24	Open	400	MAX4108
2	270	270	225	MAX4109
5	270	68	50	MAX4109
10	270	30	25	MAX4109

Layout Considerations

The MAX4108 EV kit layout has been optimized for high-speed signals and low distortion, with careful attention to grounding, power-supply bypassing, and signal-path layout. The small, surface-mount, ceramic bypass capacitors (C1, C2, C4, and C5) have been placed as close to the four MAX4108 supply pins as possible. Bypass capacitors for pins 5 and 8 must connect to a low-impedance ground. Individual power-supply traces are used to separate the MAX4108 input and output stage currents to reduce distortion. Unused pin 1 is grounded to prevent unwanted noise from coupling into the circuit.
