<td>1.61 (1U) inch</td>
</tr>
</tbody>
</table>

**Features**

- Universal AC input / Full range
- Built-in active PFC function
- High efficiency up to 90%
- Forced air cooling by built-in DC fan
- Output voltage programmable
- Active current sharing up to 4000W (3+1)
- Built-in remote ON-OFF control / remote sense / auxiliary power / DC OK signal
- Protections: Short circuit / Overload / Over voltage / Over temperature
- Optional conformal coating
- 5 years warranty

**Applications**

- Factory control or automation apparatus
- Test and measurement instrument
- Laser related machine
- Burn-in facility
- RF application

**Description**

RSP-1000 is a 1KW single output enclosed type AC/DC power supply with 1U low profile. This series operates for 90~264VAC input voltage and offers the models with the DC output mostly demanded from the industry. Each model is cooled by the built-in fan with fan speed control, working for the temperature up to 60°C. Moreover, RSP-1000 provides vast design flexibility by equipping various built-in functions such as the output programming, active current sharing, remote ON-OFF control, auxiliary power, etc.

**Model Encoding / Order Information**

```
RSP - 1000 - [24]

- Output voltage (12V/15V/24V/27V/48V)
- Output wattage
- Series name
## SPECIFICATION

### 1000W Power Supply with Single Output

#### RSP-1000 series

### OUTPUT VOLTAGE ADJ. RANGE

- **UL62368-1, CSA C22.2, TUV EN62368-1, CCC GB4943.1, BS EN/ , BSMI CNS14336-1, AS/NZS62368.1**

### SAFETY STANDARDS

- **No. 62368-1**

### REMOTE SENSE

- Compensate voltage drop on the load wiring up to 0.5V. Please refer to the Function Manual.
- Up to 4000W or (3+1) units. Please refer to the Function Manual.

### CURRENT SHARING

### EMC IMMUNITY

- **UL62368-1, CSA C22.2 No. 62368-1, TUV BS EN/EN62368-1, CCC GB4943.1, BSMI CNS14336-1, AS/NZS62368.1, IS13252(Part1):2010/IEC60950-1:2005, EAC TP TC 004 approved**

### WITHSTAND VOLTAGE

- **VP-O/P:3Kvac**
- **IP-FG:2Kvac**
- **O/P-FG:0.5Kvac**

### ISOLATION RESISTANCE

- **VP-O/P, IP-FG, O/P-FG:100M Ohms / 500V DC / 25°C / 70% RH**

### SAFETY & EMC (Note 5)

#### EMC EMISSION

- **Parameter**
- **Standard**
- **Test Level / Note**
  - Conducted
  - Radiated
  - Harmonic Current
  - Voltage Flicker
  - EM EN/EN50524, BS EN/EN61000-6-2, CCC GB17625.1, GB/T9254, BSMI CNS13438

#### EMC IMMUNITY

- **Parameter**
- **Standard**
- **Test Level / Note**
  - ESD
  - Radiated
  - Burst
  - Surge
  - Conducted
  - Magnetic Field
  - Voltage Dips and Interruptions

### Others

- **MTBF**
  - 313.1K hrs min.
  - Telcordia SR-332 (Bellcore) ; 116.75K hrs min.
  - MIL-HDBK-217F (25°C)

- **DIMENSION**
  - 295’’127’’41mm (L’’W’’H’’)

- **Packing**
  - 1.95Kg. 6pcs/12.7Kg/1.15CUFT

### Note

1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12’’ twisted pair wire terminated with a 0.1uf & 47uf parallel capacitor.
3. Tolerance : includes set up tolerance, line regulation and load regulation.
4. Derating may be needed under low input voltages. Please check the derating curve for more details.
5. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are being executed by mounting the unit on a 360mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to “EMI testing of component power supplies.” [as available on http://www.meanwell.com]
6. The ambient temperature derating of 3.5% /1000m with fanless models and of 5% /1000m with fan models for operating altitude higher than 2000m(6500ft).

### Packing

#### Derating Curve

![Derating Curve](image)

File Name: RSP-1000-SPEC 2021-09-15

※ The curve above is measured at 230VAC.
1. Remote Sense
※ The Remote Sense compensates voltage drop on the load wiring up to 0.5V.

◎ The +S signal should be connected to the positive terminal of the load whereas -S signal to the negative terminal.
◎ This configuration is based on the assumption the Output Voltage Programming is not activated and power supply is ON.

2. Remote ON-OFF Control
※ The power supply can be turned ON-OFF individually or along with other units by using the "Remote ON-OFF" function.

<table>
<thead>
<tr>
<th>Between Remote ON-OFF (pin6) and -S (pin2)</th>
<th>Power Supply Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Switch Short</td>
<td>ON</td>
</tr>
<tr>
<td>Switch Open</td>
<td>OFF</td>
</tr>
</tbody>
</table>

◎ The power supply is shipped, by factory default, with Remote ON-OFF (pin6) and -S (pin2) shorted by connector.
◎ When multiple power supplies need to turn ON/OFF simultaneously by Remote ON-OFF control, -S & -V, as well as +S & +V, on each power supply should be connected.

3. DC_OK signal
※ "DC_OK" is an open collector signal. It indicates the output status of the power supply. It can operate in two ways: One is sinking current from external TTL signal; the other is sending out a TTL voltage signal.
◎ Sinking current from external TTL signal: The maximum sink current is 10mA and the maximum external voltage is 5.6V.
◎ Sending out TTL voltage signal:

<table>
<thead>
<tr>
<th>Between DC_OK (pin5) and GND (pin11 &amp; 12)</th>
<th>Output Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 ~ 1V</td>
<td>ON</td>
</tr>
<tr>
<td>3.3 ~ 5.6V</td>
<td>OFF</td>
</tr>
</tbody>
</table>
4. Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)

※ In addition to the adjustment via the built-in potentiometer, the output voltage can be trimmed to 40~110% of the nominal voltage by applying either an EXTERNAL VOLTAGE or an EXTERNAL RESISTANCE.

(1) Applying EXTERNAL VOLTAGE between "Vci"(pin9) and "-S"(pin2) as shown in Fig 4.1

Fig 4.1.1

Fig 4.2.1

Fig 4.3.1

Fig 4.1

Fig 4.2

Fig 4.3

※ +S & +V and -S & -V also need to be connected on CN50.

(2) Applying EXTERNAL RESISTANCE as shown in Fig 4.2 & Fig 4.3

(A) Output voltage goes down

(B) Output voltage goes up

※ +S & +V and -S & -V also need to be connected on CN50.

※ Caution: By factory default, the Output Voltage Programming is not activated, and Vco (pin8) and Vca (pin10) are shorted by connector. Whenever this function is not needed to activate, as assumed in other sections’ diagrams, please keep Vco (pin8) and Vca (pin10) shorted; otherwise, the power supply will have no output.
5. Current Sharing with Remote Sense
RSP-1000 has the built-in active current sharing function and can be connected in parallel, up to 4 units, to provide higher output power as exhibited below:

※ The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
※ Difference of output voltages among parallel units should be less than 0.2V.
※ The total output current must not exceed the value determined by the following equation:
  \[ \text{Maximum output current at parallel operation} = \text{Rated current per unit} \times (\text{Number of unit}) \times 0.9 \]
※ When the total output current is less than 5% of the total rated current, or say (5% of Rated current per unit) \( \times \) (Number of unit) the current shared among units may not be fully balanced.

![Diagram of current sharing with remote sense](image)

Fig 5.1

- +S, -S and CS are connected mutually in parallel.
