

REED SWITCH

ORD213

Extreme Ultraminiature (Low-level Load 24 V Max. for General Control)

GENERAL DESCRIPTION

The ORD213 is a small single-contact reed switch designed for general control of low-level loads less than 24 V. The reed contacts are sealed within the glass tube within inert gas to maintain contact reliability.

Features

- (1) The reed contacts are hermetically sealed within a glass tube with inert gas and do not receive any influence from the external atmospheric environment.
- (2) High response speed
- (3) The operating system and electrical circuits are coaxially composed and the ORD213 is suited to the applications for high frequency transmission.
- (4) Compact and light weight
- (5) The superior corrosion resistance and wear resistance of the contacts assure stable switching operation and long life.
- (6) With a permanent magnet installed, the reed switch economically and easily becomes a proximity switch.
