

150 mA Low Noise μ Cap CMOS LDO

Features

- Input Voltage Range: 2.7V to 6.0V
- Thin SOT Package: 1 mm Height SOT-23-5
- Ultra-Low Output Noise: 30 μ V_{RMS}
- Stability with Ceramic Output Capacitors
- Ultra-Low Dropout: 135 mV @ 150 mA
- High output accuracy:
 - 1.0% Initial Accuracy
 - 2.0% Over Temperature
- Low Quiescent Current: 90 μ A
- Tight Load and Line Regulation
- TTL-Logic-Controlled Enable Input
- “Zero” Off-Mode Current
- Thermal Shutdown and Current-Limit Protection

Applications

- Cellular Telephones and Pagers
- Cellular Accessories
- Battery-Powered Equipment
- Laptop, Notebook, and Palmtop Computers
- Consumer/Personal Electronics

General Description

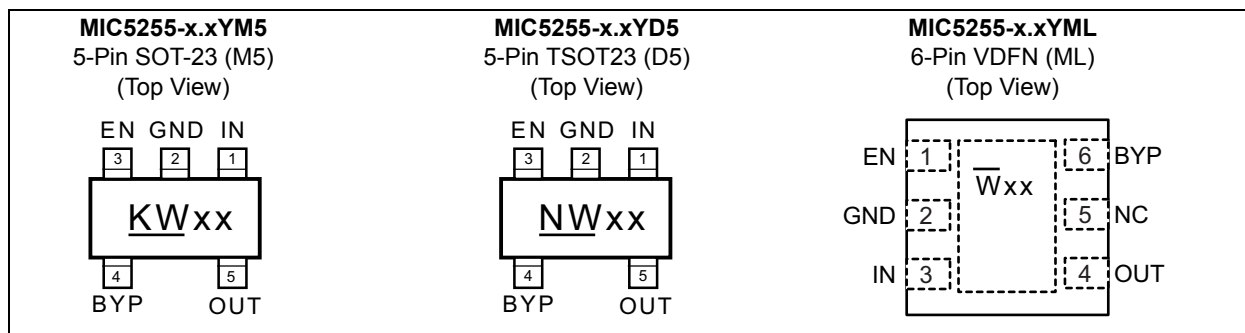

The MIC5255 is an efficient, precise CMOS voltage regulator optimized for ultra-low-noise applications. It offers 1% initial accuracy, extremely-low dropout voltage (135 mV at 150 mA) and low ground current (typically 117 μ A at full load). The MIC5255 provides a very low noise output, ideal for RF applications where a clean voltage source is required. A noise bypass pin is also available for further reduction of output noise.

Designed specifically for handheld and battery powered devices, the MIC5255 provides a TTL-logic-compatible enable pin. When disabled, power consumption drops nearly to zero.

The MIC5255 also works with low-ESR ceramic capacitors, reducing the amount of board space necessary for power applications, critical in handheld wireless devices.

Key features include current limit, thermal shutdown, faster transient response, and an active clamp to speed up device turn-off. Available in the 6-pin 2 mm \times 2 mm VDFN package, the SOT-23-5 package and the Thin SOT-23-5, which offers the same footprint as the standard SOT-23-5, but is only 1 mm tall. The MIC5255 offers a range of output voltages.

Package Types

MIC5255

Typical Application Schematic

Block Diagram

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings †

Supply Voltage (V_{IN})	0V to +7V
Enable Voltage (V_{EN})	0V to +7V
Power Dissipation (P_D , Note 1)	Internally Limited
ESD Rating (Note 2)	2 kV

Operating Ratings ‡

Supply Voltage (V_{IN})	+2.7V to +6V
Enable Voltage (V_{EN})	0V to V_{IN}

† Notice: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

‡ Notice: The device is not guaranteed to function outside its operating ratings.

Note 1: The maximum allowable power dissipation of any T_A (ambient temperature) is $P_{D(max)} = (T_{J(max)} - T_A) / \theta_{JA}$. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown. The θ_{JA} of the MIC5255-x.xYM5 (all versions) is 235°C/W on a PC board. See the [Thermal Considerations](#) section for further details.

2: Devices are ESD sensitive. Handling precautions recommended. Human body model, 1.5 kΩ in series with 100 pF.

MIC5255

TABLE 1-1: ELECTRICAL CHARACTERISTICS

Electrical Characteristics: $V_{IN} = V_{OUT} + 1V$, $V_{EN} = V_{IN}$; $I_{OUT} = 100\ \mu A$; $T_J = 25^\circ C$, bold values indicate $-40^\circ C \leq T_J \leq +125^\circ C$; unless noted. (Note 1).						
Parameters	Sym.	Min.	Typ.	Max.	Units	Conditions
Output Voltage Accuracy	V_O	-1	—	1	%	$I_{OUT} = 100\ \mu A$
		-2	—	2		
Line Regulation	ΔV_{LNR}	—	0.02	0.05	%/V	$V_{IN} = V_{OUT} + 1V$ to 6V

Thermal Protection						
Thermal Shutdown Temperature	—	—	150	—	$^\circ C$	—
Thermal Shutdown Hysteresis	—	—	10	—	$^\circ C$	—

Note 1: Specification for packaged product only.

- Regulation is measured at constant junction temperature using low duty cycle pulse testing. Parts are tested for load regulation in the load range from 1.0 mA to 150 mA. Changes in output voltage due to heating effects are covered by the thermal regulation specification.
- Dropout voltage is defined as the input to output differential at which the output voltage drops 2% below its nominal value measured at 1V differential. For outputs below 2.7V, dropout voltage is the input-to-output voltage differential with the minimum input voltage 2.7V. Minimum input operating voltage is 2.7V.
- Ground pin current is the regulator quiescent current. The total current drawn from the supply is the sum of the load current plus the ground pin current.

TEMPERATURE SPECIFICATIONS

Parameters	Sym.	Min.	Typ.	Max.	Units	Conditions
Temperature Ranges						
Junction Operating Temperature Range	T_J	-40	—	+125	°C	Note 1
Storage Temperature	T_S	-60	—	+150	°C	—
Lead Temperature	—	—	—	+260	°C	Soldering, 5s
Package Thermal Resistances						
Thermal Resistance, SOT-23-5	θ_{JA}	—	235	—	°C/W	—
Thermal Resistance, 2x2 VDFN-6	θ_{JA}	—	90	—	°C/W	—

Note 1: The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e., T_A , T_J , θ_{JA}). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +125°C rating. Sustained junction temperatures above +125°C can impact the device reliability.

2.0 TYPICAL PERFORMANCE CURVES

Note: The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 3-1](#).

TABLE 3-1: PIN FUNCTION TABLE

Pin Number SOT23-5 TSOT23-5	Pin Number VDFN-6	Pin Name	Description
1	3	IN	Supply Input.
2	2	GND	Ground.
3	1	EN	Enable/Shutdown (Input): CMOS-compatible input. Logic-high = enable; logic-low = shutdown. Do not leave open.
4	6	BYP	Reference Bypass: Connect external $0.01\ \mu\text{F} \leq C_{\text{BYP}} \leq 1.0\ \mu\text{F}$ capacitor to GND to reduce output noise. May be left open.
5	4	OUT	Regulator Output.
—	5	NC	No internal connection.
—	EP	GND	Ground: Internally connected to the exposed pad. Connect externally to GND pin.

4.0 APPLICATION INFORMATION

4.1 Enable Shutdown

The MIC5255 comes with an active-high enable pin that allows the regulator to be disabled. Forcing the enable pin low disables the regulator and sends it into a “zero” off-mode current state. In this state, current consumed by the regulator goes nearly to zero. Forcing the enable pin high enables the output voltage. This part is CMOS and the enable pin cannot be left floating; a floating enable pin may cause an indeterminate state on the output.

4.2 Input Capacitor

The MIC5255 is a high performance, high bandwidth device. Therefore, it requires a well-bypassed input supply for optimal performance. A 1 μF capacitor is required from the input to ground to provide stability. Low-ESR ceramic capacitors provide optimal performance at a minimum of space. Additional high frequency capacitors, such as small valued NPO dielectric type capacitors, help filter out high frequency noise and are good practice in any RF-based circuit.

4.3 Output Capacitor

The MIC5255 requires an output capacitor for stability. The design requires 1 μF or greater on the output to maintain stability. The design is optimized for use with low-ESR ceramic chip capacitors. High ESR capacitors may cause high frequency oscillation. The maximum recommended ESR is 300 m Ω . The output capacitor can be increased, but performance has been optimized for a 1 μF ceramic output capacitor and does not improve significantly with larger capacitance.

X7R/X5R dielectric-type ceramic capacitors are recommended because of their temperature performance. X7R-type capacitors change capacitance by 15% over their operating temperature range and are the most stable type of ceramic capacitors. Z5U and Y5V dielectric capacitors change value by as much as 50% and 60%, respectively, over their operating temperature ranges. To use a ceramic chip capacitor with Y5V dielectric, the value must be much higher than an X7R ceramic capacitor to ensure the same minimum capacitance over the equivalent operating temperature range.

4.4 Bypass Capacitor

A capacitor can be placed from the noise bypass pin to ground to reduce output voltage noise. The capacitor bypasses the internal reference. A 0.01 μF capacitor is recommended for applications that require low-noise outputs. The bypass capacitor can be increased, further reducing noise and improving PSRR. Turn-on time increases slightly with respect to bypass capacitance. A unique quick-start circuit allows the

MIC5255 to drive a large capacitor on the bypass pin without significantly slowing turn-on time. Refer to the [Typical Performance Curves](#) section for performance with different bypass capacitors.

4.5 Active Shutdown

The MIC5255 also features an active shutdown clamp, which is an N-Channel MOSFET that turns on when the device is disabled. This allows the output capacitor and load to discharge, de-energizing the load.

4.6 No-Load Stability

The MIC5255 will remain stable and in regulation with no load unlike many other voltage regulators. This is especially important in CMOS RAM keep-alive applications.

4.7 Thermal Considerations

The MIC5255 is designed to provide 150 mA of continuous current in a very small package. Maximum power dissipation can be calculated based on the output current and the voltage drop across the part. To determine the maximum power dissipation of the package, use the junction-to-ambient thermal resistance of the device and the following basic equation:

EQUATION 4-1:

$$P_{D(MAX)} = \left(\frac{T_{J(MAX)} - T_A}{\theta_{JA}} \right)$$

$T_{J(MAX)}$ is the maximum junction temperature of the die, 125°C, and T_A is the ambient operating temperature. θ_{JA} is layout dependent; [Table 4-1](#) shows examples of junction-to-ambient thermal resistance for the MIC5255.

TABLE 4-1: SOT23-5 THERMAL RESISTANCE

Package	θ_{JA} Recommended Minimum Footprint	θ_{JA} 1” Square Copper Clad	θ_{JC}
SOT23-5 (M5 or D5)	235°C/W	185°C/W	145°C/W

The actual power dissipation of the regulator circuit can be determined using the equation:

EQUATION 4-2:

$$P_D = (V_{IN} - V_{OUT})I_{OUT} + V_{IN} \times I_{GND}$$

Substituting $P_{D(MAX)}$ for P_D and solving for the operating conditions that are critical to the application will give the maximum operating conditions for the regulator circuit. For example, when operating the MIC5255-3.0YM5 at +50°C with a minimum footprint layout, the maximum input voltage for a set output current can be determined as follows:

EQUATION 4-3:

$$P_{D(MAX)} = \left(\frac{125^{\circ}C - 50^{\circ}C}{235^{\circ}C/W} \right) = 319mW$$

The junction-to-ambient thermal resistance for the minimum footprint is 235°C/W, from [Table 4-1](#). The maximum power dissipation must not be exceeded for proper operation. Using the output voltage of 3.0V and an output current of 150 mA, the maximum input voltage can be determined for the series of equations between [Equation 4-4](#) and [Equation 4-7](#). Because this device is CMOS and the ground current is typically 100 µA over the load range, the power dissipation contributed by the ground current is <1% and can be ignored for this calculation:

EQUATION 4-4:

$$319mW = (V_{IN} - 3.0V) \times 150mA$$

EQUATION 4-5:

$$319mW = V_{IN} \times 150mA - 450mW$$

EQUATION 4-6:

$$769mW = V_{IN} \times 150mA$$

EQUATION 4-7:

$$V_{IN(MAX)} = 5.12V$$

Therefore, a 3.0V application at 150 mA of output current can accept a maximum input voltage of 5.12V in a SOT23-5 package.

APPENDIX A: REVISION HISTORY

Revision A (November 2016)

- Converted Micrel document MIC5255 to Microchip data sheet DS20005661A.
- Minor text changes throughout.
- Leaded parts (B-designated) removed from data sheet.
- Voltage options updated in the [Product Identification System](#) section.
- DFN package naming updated to Microchip-standard VDFN package.
- Typical ground current updated on Page 1.
- Equation values on Page 12 updated.

NOTES:

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, contact your local Microchip representative or sales office.

PART NO. - XX X XX - XX				
Device	Voltage	Temperature	Package	Media Type
Device: MIC5255: 150 mA Low Noise μ Cap CMOS LDO				
Voltage: (Note 1, Note 2, Note 3)	2.5	=	2.5V	
	2.8	=	2.8V	
	3.0	=	3.0V	
	3.2	=	3.2V	
	3.3	=	3.3V	
Temperature:	Y	=	-40°C to +125°C	
Package:	M5	=	5-Pin SOT-23	
	D5	=	5-Pin TSOT-23	
	ML	=	6-Pin 2 mm x 2 mm VDFN	
Media Type: (Note 4)	TR	=	3,000/Reel (5,000/Reel if ML package option)	
	TX	=	3,000/Reel with Reverse Pin 1 Orientation	
Note 1: Other voltage options available. Contact Microchip for details. Note 2: The 5-Pin TSOT package (D5) is not available in the 3.2V option. Note 3: The 6-Pin VDFN package (ML) is not available in 2.5V and 3.2V options. Note 4: The TX media type is not available with the ML package option.				
Examples: a) MIC5255-2.5YM5-TR: 150 mA Low Noise μ Cap CMOS LDO, 2.5V Output Voltage, -40°C to +125°C Temp. Range, 5-Pin SOT-23, 3,000/Reel b) MIC5255-2.5YD5-TX: 150 mA Low Noise μ Cap CMOS LDO, 2.5V Output Voltage, -40°C to +125°C Temp. Range, 5-Pin TSOT-23, 3,000/Reel with Reverse Pin 1 Orientation c) MIC5255-2.8YML-TR: 150 mA Low Noise μ Cap CMOS LDO, 2.8V Output Voltage, -40°C to +125°C Temp. Range, 6-Pin VDFN, 5,000/Reel d) MIC5255-3.0YD5-TX: 150 mA Low Noise μ Cap CMOS LDO, 3.0V Output Voltage, -40°C to +125°C Temp. Range, 5-Pin TSOT-23, 3,000/Reel with Reverse Pin 1 Orientation e) MIC5255-3.2YM5-TR: 150 mA Low Noise μ Cap CMOS LDO, 3.2V Output Voltage, -40°C to +125°C Temp. Range, 5-Pin SOT-23, 3,000/Reel f) MIC5255-3.3YML-TR: 150 mA Low Noise μ Cap CMOS LDO, 3.3V Output Voltage, -40°C to +125°C Temp. Range, 6-Pin VDFN, 5,000/Reel Note 1: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.				

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELoq® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
