
CryptoAuth Trust Platform User's Guide

Introduction

The Microchip CryptoAuth Trust Platform is the newest addition to the CryptoAuthentication™ evaluation kits. This kit is used for exploring and developing solutions for the IoT space with a pre-provisioned ATECC608A Trust&GO, pre-configured TrustFLEX and fully customizable TrustCUSTOM products.

The Trust&GO and TrustFLEX products have been developed to allow for an easy way to add hardware security to IoT Cloud solutions. Using the kit with the Microchip development tools and provisioning systems allows for customers with low volume projects to easily and readily implement secure authentication into their application.

This user guide provides a physical overview of the connections, components and features associated with the CryptoAuth Trust Platform development kit.

1. Hardware Overview

The CryptoAuth Trust Platform consists of a Microchip SAM D21 microcontroller configured as the main MCU. It comes pre-programmed with Microchip's Secure Products Group (SPG) kit protocol. This protocol facilitates the communication between the CryptoAuthentication devices and the host MCU over the USB HID interface. The data transfer between the secure elements and the host MCU is indicated by the Status LED.

The trust platform consists of three secure elements: ATECC608A-TNGTLS ([Trust&GO](#)), ATECC608A-TFLXTLS Prototype ([TrustFLEX](#)) and ATECC608A-MAHDA ([TrustCUSTOM](#)). Each of the secure elements has a different I²C address that enables its communication with the host MCU, which eliminates the line contention issue.

Figure 1-1. CryptoAuth Trust Platform Board Components

1.1 Kit Ordering Code and Components

Ordering Information

Kit Name: [CryptoAuth Trust Platform Development Kit](#)

Ordering Code: DM320118

Availability: The kit will be available from Microchip Direct and multiple distributors.

CryptoAuth Trust Platform Kit Contents and Requirements

The CryptoAuth Trust Platform Kit contains:

- CryptoAuth Trust Platform board

A micro USB cable (not included) is required to operate the board.

1.2 Functional Description

The block diagram in [Figure 1-2](#) illustrates the major connections of the CryptoAuth Trust Platform. For additional details refer to the board schematics referenced in [section 1.3 Hardware Documentation](#) of the document.

Figure 1-2. Block Diagram

Main Board Components

- **ATSAMD21:** The Microchip SAM D21 is an ARM® Cortex M0+ based microcontroller. The MCU connects to the three secure elements via I²C. The mikroBUS header has I²C, SPI, UART, GPIO and analog connections to the microcontroller. This enables the possibility of using the CryptoAuth Trust Platform with many types of MikroElektronika Click boards™.
- **Secure Elements:** The Trust Platform consists of three ATECC608A-based ICs, as listed in the following [table](#). Please refer to the specific data sheets associated with each of these devices for more details.

Device	Default 7-bit I ² C Address	8-bit Programmed I ² C Address Value ⁽¹⁾
ATECC608A-TNGTLS	0x35	0x6A
ATECC608A-TFLXTLS	0x36	0x6C
ATECC608A-MAHDA	0x60	0xC0

Note:

1. This is the I2C_Address byte value programmed into the ATECC608A device.

- **mikroBUS Header:** The mikroBUS header is a pre-defined header connection for all the MikroElektronika boards. This lets the user connect many types of Click sensors and add-on boards to the Trust Platform. The Trust Platform has SPI, I²C, UART and GPIO and analog connections to the host microcontroller.
- **DIP Switch:** The switch is used to select between the on-board ATECC608A Trust Platform devices and the mikroBUS header. The switches disconnect the SDA lines of the I²C interface to prevent conflict in case two I²C addresses are the same. Both switches can be enabled if all I²C addresses are unique on all devices connected to the board.

Switch Settings		What is Enabled	
SW2_1	SW2_2	mikroBUS Header	On-Board Devices
ON	ON	Yes	Yes
OFF	ON	No	Yes
ON	OFF	Yes	No
OFF	OFF	No	No

- **nEDBG Debugger:** The debugger is used to program and flash the host MCU. Debug information can also be read back from the host MCU through the debugger interface. When plugged into the system and opened with MPLAB X IDE, the nEDBG debugger will show up with a serial number of MCHP3311xxxxxxxxxxxxxx.
- **USB Hub:** The Microchip USB2422 is a dual-port USB hub. The hub will pass data between the upstream port and the downstream devices. The downstream devices are the debugger and the host MCU.

1.3 Hardware Documentation

Additional documentation for the kit can be found on the Microchip Website for the [DM320118](#).

This includes:

1. Board Design Documentation including Schematics and 3D Views
2. Gerber Files
3. CryptoAuth Trust Platform User's Guide (DM320118)
4. Trust Platform Design Suite Tools

2. mikroBUS™ and Click Add-On Boards

The mikroBUS connector is emerging as a de facto industry-standard add-on board form factor. The CryptoAuth Trust Platform board has a single mikroBUS host connector. Having this capability dramatically expands the usefulness of this board for developing and prototyping new applications. All of the boards listed in [Table 2-1](#) have been developed by MikroElektronika, except as noted.

Table 2-1. mikroBUS Add-on Boards

Board Name	Devices Supported	Manufacturer	Description
ATECC608A DT100104⁽¹⁾	ATECC608A-TNGTLS ATECC608A-TFLXTLS ATECC608A-MAHDA	Microchip	The ATECC608A Trust board provides additional sample units for doing development work. This board was developed as an alternative to using socketed boards. Each of the devices can be individually selected using the on-board DIP switches.
Secure UDFN click	All Microchip CryptoAuthentication devices	MikroElektronika	The secure UDFN Click board™ has been developed as an 8-pin UDFN socketed solution for configuring and provisioning CryptoAuthentication™ devices. These devices may be used to mount to early prototype or production boards.
Secure SOIC click	All Microchip CryptoAuthentication devices	MikroElektronika	The secure SOIC click board has been developed as an 8-pin SOIC socketed solution for configuring and provisioning CryptoAuthentication devices. These devices may be used to mount to early prototype or production boards.
WiFi 7 click	ATWINC1510	MikroElektronika	WiFi module utilizing the ATWINC510. The board supports IEEE® 802.11 b/g/n protocols and communicates over the SPI interface.
Secure 4 click	ATECC608A	MikroElektronika	Has a generic ATECC608A secure element with an I²C interface. This device is the same as the ATECC608A TrustCustom device that is mounted on the CryptoAuth Trust Platform board.
Secure click	ATECC508A	MikroElektronika	Has a generic ATECC508A secure element with an I²C interface.
Secure 3 click	ATSHA204A	MikroElektronika	Has a generic ATSHA204A secure element with an I²C interface. The device has a cryptographic coprocessor with symmetric secure hardware-based key storage.
Secure 6 click	ATSHA204A	MikroElektronika	Has a generic ATSHA204A secure element with a SWI interface. The device has a cryptographic coprocessor with symmetric secure hardware based key storage.
Secure 2 Click	ATAES132A	MikroElektronika	Has a generic ATAES132A secure element with an I²C Interface. The ATAES132A is a 32K serial EEPROM that can be configured as a secure memory device.
mikroBUS Shuttle	Click expansion boards	MikroElektronika	The mikroBUS Shuttle is a small add-on board that can be used to expand the mikroBUS to multiple mikroBUS connectors.

.....continued

Board Name	Devices Supported	Manufacturer	Description
Shuttle Click	Click expansion boards	MikroElektronika	The Shuttle Click is a socket expansion board that provides an elegant solution for stacking up to four Click boards.

Note:

1. Manufactured by Microchip.

3. Software Requirements

The CryptoAuth Trust Platform can be used in a variety of ways. These include:

1. As a development tool in conjunction with Microchip's Trust Platform Design Suite of use case tools.
2. As a development and demonstration platform for Microchip predefined applications.
3. As a development platform to develop your own applications using Microchip's Python-based tools or C-based tools.

Various software tools are available to work with the CryptoAuth Trust Platform.

3.1 Software Application Development

The following tools are useful for developing or modifying applications.

Trust Platform Design Suite

The [Microchip Trust Platform Design Suite](#) of use case tools are based on Jupyter Notebooks and Python programs to allow a developer to quickly define and develop applications for the Trust Platform products.

The Microchip Trust Platform Design Suite provides the ability to inter-operate with the on-board ATECC608A CryptoAuthentication devices or CryptoAuthentication devices attached through the mikroBUS header. The tool provides an easy way to select from available device options and generate the required configuration files needed for provisioning. The tool can also be used to develop applications utilizing the CryptoAuth Trust Platform.

MPLAB® X IDE

[MPLAB X](#) is an Integrated Development Environment (IDE) that works on Windows®, macOS®, and Linux® environments. The tools can be used to develop new embedded applications using the onboard SAM D21 microcontroller. The tool will automatically make use of the onboard nEDBG debugger to program the SAM D21 microcontroller. The debugger can also be used to provide debug information back from the host microcontroller to a terminal window through a COM port.

Atmel Studio 7

[Atmel Studio 7](#) is an Integrated Development Environment (IDE) that works on Windows® environments. The tools can be used to develop new embedded applications using the onboard SAM D21 microcontroller. The tool will automatically make use of the onboard nEDBG debugger to program the SAM D21 microcontroller. The debugger can also be used to provide debug information back from the host microcontroller to a terminal window through a COM port.

CryptoAuthLib

CryptoAuthLib was developed to make working with Microchip's CryptoAuthentication devices a simple and straightforward process. CryptoAuthLib has been designed with a Hardware Abstraction Layer (HAL) to make it easily extensible to other microcontrollers. Both C and Python versions of the library are available. The Python version of the library is maintained by Microchip and available through the PythonPackage Index website (pypi.org). The most recent version of CryptoAuthLib can be found on Microchip's GitHub site.

- [CryptoAuthLib - Python](#)
- [CryptoAuthLib - GitHub](#)

3.2 Firmware Upgrade

New firmware for the CryptoAuth Trust Platform may be available periodically with new features or enhancements. In addition, specific applications developed by Microchip may be made available for use with this development board. The latest version of the firmware and information about other applications will be found on the [DM320118](#) product page.

Two Microchip tools exist for upgrading the firmware of the CryptoAuth Trust Platform development kit. Firmware upgrades are done in the standard way using both tools and are not described in more detail here. Both of these options utilized the nEDBG on-board debugger. These options are:

- MPLAB X IPE (Integrated Programming Environment) – This tool is provided as part of the MPLAB X IDE download.
- Atmel Studio 7 – Integrated Design Environment.

Notice: Upgrading to the latest version of the tools is recommended. Older versions of the tool may not recognize the nEDBG debugger or the specific kit information.

4. Document Revision History

Revision A (September 2019)

- Initial release of this User's Guide.

The Microchip Website

Microchip provides online support via our website at <http://www.microchip.com/>. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to <http://www.microchip.com/pcn> and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: <http://www.microchip.com/support>

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
