DSC150X/DSC152X

Low-Power Low-Jitter MEMS Oscillators

Features

- Any Frequency Between:
  - 2.3 MHz to 170 MHz (2.5V and 3.3V)
  - 2.3 MHz to 125 MHz (1.8V)
- Exceptional Total Stability Over Temperature ±20 ppm, ±25 ppm, ±50 ppm
- Low Phase Jitter (1 ps Typical)
- Operating Voltage 1.8V/2.5V to 3.3V
- Standby Mode for Battery Life Saving
- Fast Startup Time (2.5 ms Typical)
- Extended Temperature Range: –40°C to +125°C
- Low Operation Current (6.5 mA Typical)
- Ultra-Small Footprints:
  - 2.0 mm x 1.6 mm LGA Package
  - 2.5 mm x 2.0 mm LGA Package
  - 7.0 mm x 5.0 mm DFN Package
- High Reliability: 20x Better MTF than Quartz Oscillators
- MIL-STD 883 Shock and Vibration Resistant
- Lead-Free and RoHS-Compliant

Applications

- USB, SATA, SAS Reference Clock
- 100M/1G/10G Ethernet Clock
- IP Cam, DVR, OTT-Box
- Storage/SSD
- IoT Terminal/Gateway

Benefits

- Pin for Pin “Drop-In” Replacement for Industry Standard Oscillators
- Semiconductor-Level Reliability, Significantly Higher than Quartz
- Short Production Lead Time
- Longer Battery Life/Reduced Power Consumption
- Compact Plastic Package
- Cost Effective

General Description

The DSC1501/2/3/4/5 and DSC1521/2/3/4/5 are industry-leading MEMS oscillators that offer excellent jitter and stability performance at very low power over a wide range of supply voltage (1.71V to 3.63V) and temperature (–40°C to +125°C). The devices operate from 2.3 MHz to 170 MHz with 2.5V and 3.3V supply voltage and from 2.3 MHz to 125 MHz with 1.8V supply voltage.

The devices incorporate an all-silicon resonator that is extremely robust. A MEMS-based design allows for a higher level of reliability, making the DSC150x/DSC152x ideal for rugged, industrial, and portable applications where stress, shock, and vibrations can damage quartz crystal-based systems. The devices are also an excellent choice as clock reference for small, battery-operated devices, such as wearables and Internet-of-Things (IoT) devices.

Available in industry standard packages, the DSC150x/DSC152x can be a drop-in replacement to standard crystal oscillators.

TEMPERATURE SPECIFICATIONS

Parameters	Symbol	Min.	Typ.	Max.	Units	Conditions
Temperature Ranges						
Operating Ambient Temperature Range	T_A	–40	—	+125	°C	—
Junction Operating Temperature	T_J	—	—	+125	°C	Note 1
Storage Temperature Range	T_S	–55	—	+150	°C	—
Lead Temperature	—	—	+260		°C	Soldering, 20 sec.

Note 1: The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e., T_A, T_J, Ψ_{JA}). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +125°C rating. Sustained junction temperatures above +125°C can impact the device reliability.

2.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 2-1.

8.0 FUNCTIONAL DESCRIPTION

The DSC150x/DSC152x are MEMS-based CMOS oscillators that combine excellent jitter and stability performance at a very low power over a wide range of supply voltage and temperature. The device operates from 2.3 MHz to 170 MHz with 2.5V and 3.3V supply voltage and from 2.3 MHz to 125 MHz with 1.8V supply voltage over –40°C to +125°C temperature range. It has four pins and comes in different industry-standard package sizes.

The standard DSC150x/DSC152x comes with standard output drive strength with optional low and high drive strengths (see Table 8-1). Low output drive strength offers slower edge rates for lower EMI interference.

TABLE 8-1: OUTPUT DRIVE STRENGTH

Device	CMOS Output Strength
DSC1501/21	LVCMOS Medium drive (2.5V/3.3V)
DSC1502/22	LVCMOS Standard drive (2.5V/3.3V)
DSC1503/23	LVCMOS Low drive (2.5V/3.3V)
DSC1504/24	LVCMOS Low drive (1.8V)
DSC1505/25	LVCMOS Standard drive (1.8V)

Pin 1 can be programmed to implement Enable function (OE) or Standby function (STB).

TABLE 8-2: ENABLE AND STANDBY FUNCTION

Control Pin (Pin 1) Definition

Users can build the part with their desired output drive strength and pin 1 control pin options by using the ClockWorks Configurator online tool.

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods being used in attempts to breach the code protection features of the Microchip devices. We believe that these methods require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Attempts to breach these code protection features, most likely, cannot be accomplished without violating Microchip's intellectual property rights.
- Microchip is willing to work with any customer who is concerned about the integrity of its code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable." Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
