1. Introduction

This document describes the Microchip PIC32MK MCJ Curiosity Pro Development board (DT100113) features, functionality, and schematics. The PIC32MK MCJ Curiosity Pro Development board includes an integrated programmer or debugger, and requires no additional hardware to get started. Users can expand functionality through Arduino Uno R3 or Xplained Pro compatible expansion boards, and control a 3-phase inverter to drive a 3-phase BLDC, PMSM, and ACIM motor.

With expansion boards, the PIC32MK MCJ Curiosity Pro Development board provides the freedom to develop for a variety of applications, including Bluetooth Audio, Internet of Things (IoT), robotics development, and proof-of-concept designs. This board has a dedicated header for interfacing a CAN transceiver. All requisite control input and output signals relevant for a 3-phase motor control application have been brought to a single header which can interface to a 3-Phase Inverter board.

1.1 PIC32MK MCJ Curiosity Pro Features

- PIC32MK0512MCJ064, 120 MHz, 512 KB Flash, 64 KB SRAM
- On-Board debugger (PKoB4)
 - Real time Programming and Debugging
 - Virtual COM port (VCOM)
 - Data Gateway Interface (DGI)
- Arduino Uno R3 compatible interface
- Xplained pro extension compatible interface
- Motor Control interface
- On-Board Temperature Sensor
- CAN interface
- User buttons
- User LEDs

1.2 Kit Contents

The kit contains one PIC32MK MCJ Curiosity Pro development board, DT100113.

Note: If you are missing any part of a kit, contact a Microchip sales office for assistance. A list of Microchip offices for sales and service is provided on the last page of this document.

2.3 Power Block Diagram

The figure below shows a high-level block diagram of the power system on the PIC32MK MCJ Curiosity Pro development board. The development board can be powered through a 5V supply available from the USB connector for the PKoB4 debugger or through an external 5V or 3.3V supply which can be connected through a 2 x 2 header, J2.

2.4 Control Area Network (CAN) Bus Interface

The PIC32MK MCJ Curiosity Pro development board provides access to a CAN interface that is post transceiver. The on-board CAN transceiver is an ATA6563 allowing the application to be used with any CAN bus compliant interface.

2.5 Xplained Pro Standard Extension Header

The PIC32MK MCJ Curiosity Pro development board has three Xplained Pro compatible interfaces that enables use of existing expansion boards. Each interface consists of a dual-row, 30-pin, 100 mil, 90 degree extension male headers, while Xplained Pro extensions have their female counterparts. The extension headers can be used to connect a variety of Xplained Pro extension boards or to access the pins of the target MCU directly.

Note: All pins are not always connected.

The Pinout description for the Xplained Pro Standard Extension Header1, Header 2, and Header 3 are listed in the following tables.

2.8 PICKit™ On-Board 4

The MPLAB® PICKit On-Board 4 (PKoB4) is a new generation In-Circuit Debugger. The MPLAB PKoB4 programs faster than its predecessor and is designed to use a high-speed 2.0 USB interface, which provides a feature rich debugging experience through one USB cable. The PKoB4 is intended to support programming, debugging, and a Data Gateway interface.

The MPLAB PKoB4 In-Circuit Debugger is compatible with any one of these platforms:

- Microsoft Windows® 7 or later
- Linux®
- macOS™

The MPLAB PKoB4 In-Circuit Debugger system provides the following advantages:

Features/Capabilities:

- Connects to computer through high-speed USB 2.0 (480 Mbits/s) cable
- Programs devices using MPLAB X IDE or MPLAB IPE
- Supports multiple hardware and software breakpoints, stopwatch, and source code file debugging
- Debugs your application in real time
- Sets breakpoints based on internal events
- Monitors internal file registers
- Debugs at full speed
- Configures pin drivers
- Virtual COM Support which can establish UART communication between the host PC and the target device using the following UART Configuration:
 - Baud rate: 115,200 bps
 - Only 8-bit character format
 - No hardware flow control
 - One stop-bit
- Field-upgradeable through an MPLAB X IDE firmware download
- Adds new device support and features by installing the latest version of MPLAB X IDE (available as a free download at <https://www.microchip.com/mplabx/>)
- Indicates debugger status through on-board LEDs

Performance/Speed:

- More and faster memory
- A Real-Time Operating System (RTOS)
- No firmware download delays incurred when switching devices
- A 32-bit MCU running at 300 MHz

2.8.1 Recovery Method

If PKoB4 becomes unresponsive, users can recover the tool by following these steps:

1. With the PIC32MK MCJ Curiosity Pro development board still powered, short the 2 pads for approximately 10 seconds.

2. Open The latest version of MPLAB X IDE.
3. From *Debug > Hardware Tool Emergency Boot Firmware Recovery*.

4. Follow the onscreen instructions to reset the tool to factory conditions.

For additional information on the PKoB4, refer to the “MPLAB® PICKit™ 4 User's Guide” (DS50002751), which is available for download at the following location:

The Microchip Website

Microchip provides online support via our website at <http://www.microchip.com/>. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to <http://www.microchip.com/pcn> and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: <http://www.microchip.com/support>

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
