### General Description

Microchip's VC-820 Crystal Oscillator (XO) is a quartz stabilized square wave generator with a CMOS output. The VC-820 uses a fundamental or a third overtone crystal, oscillating in a fundamental tone, resulting in very low jitter performance, and a monolithic IC which improves reliability and reduces cost.

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings †

Storage Temperature ( $T_S$ ) .....	—	—55°C to +125°C
Soldering Temp/Time ( $T_{LS}$ ) .....	—	+260°C/30 seconds
ESD Rating, Human Body Model (Note 1) .....	—	1500V
ESD Rating, Charged Device Model (Note 1) .....	—	1000V

† Notice: Stresses in excess of the Absolute Maximum Ratings can permanently damage the device. Functional operation is not implied at these or any other conditions in excess of conditions represented in the operational sections of this data sheet. Exposure to Absolute Maximum Ratings for extended periods may adversely affect device reliability. Permanent damage is also possible if E/D is applied before  $V_{DD}$ .

Note 1: Although ESD protection circuitry has been designed into the VC-820, proper precautions should be taken when handling and mounting. Microchip employs a Human Body Model (HBM) and a Charged Device Model (CDM) for ESD susceptibility testing and design protection evaluation. Human Body Model tested to MIL-STD-883, Method 3015 conditions. Charged Device Model tested to JESD22-C101 conditions.
