USER GUIDE

ZigBit USB Stick User Guide

Introduction

This user guide describes how to get started with the $\mbox{Atmel}\mbox{\sc B}$ ZigBit $\mbox{\sc USB}$ sticks.

The ZigBit USB sticks is targeted for evaluating the USB features of the Atmel ZigBits, currently supporting the XMEGA® with AT86RF212B or AT86RF233 radio transceivers.

1. Getting Started

1.1 Features

The ZigBit® USB sticks demonstrates the XMEGA® ZigBits USB features providing a development/prototype platform.

By using the WireShark sniffer FW the ZigBit USB stick's serve as a protocol analyzer.

1.2 Design Documentation and Related Links

The following list contains links to the most relevant documents and software for the USB sticks.

1.3 Programming

How to program the extension.

1.3.1 JTAGICE

How to program using the AVR® JTAGICE mkll and JTAGICE3.

- 1. Connect the JTAGICE USB to the PC.
- 2. Connect the JTAGICE to the USB stick connector (J2) as shown on picture.
- Go to Atmel Studio: Tools/Device Programming, and select the JTAGICE connected as Tool and click Apply.
- 4. Select Device = ATxmega256A3U.
- 5. Select "Memories" and locate the source hex or elf file and click Program.

1.3.2 Bootloader

This section describes how to use the bootloader to program the ZigBit on the USBstick.

- 1. Install the Bootloader interface on the PC as described in "How to Install the "Bootloader PC tool"" on page 4.
- 2. Start the Bootloader PC GUI "FLIP" .
- Insert a jumper on header J3 .
 Insert the USB stick in the PC.
 Press the reset button.
- 4. Select Device = ATxmega256A3U (Device Select).
- 5. Select USB communication (Ctrl+U).
- 6. Select memory area to program (Use the toggle memory button bellow the Atmel logo).
- 7. Select Load Hex file (Ctrl+L).
- 8. Select Programming Options.
- 9. Click "Run", observe status in status field .
- 1.3.2.1 How to Install the "Bootloader PC tool"

How to install the Bootloader PC GUI tool,

1. Download the Flip "in system programming tool" installer from http://www.atmel.com/tools/FLIP.aspx¹

2. Performance Analyzer

2.1 Introduction

The Performance Analyzer FW together with the GUI in Atmel Studio Wireless Composer Extension provides a number of basic functional RF tests.

A quick start guide and general help is provided in Wireless Composer once started.

2.2 **Program Installation**

How to install necessary SW.

- 1. Install Atmel Studio¹.
- 2. Once Studio is installed and started use the Tools Extension Manager to install the Wireless Composer.

Select Wireless and Wireless Composer.

Restart Atmel Studio, allow help to make changes and the Performance Analyzer GUI is available in the Tools menu.

3. If not already preprogrammed - program the node with the Performance Analyzer FW available in the "Wireless Performance Analyzer Firmware extension" or from source code provided in ASF.

If using an Wireless board with a μ C embedded, the Performance Analyzer FW has to be programmed using the Bootloader or JTAGICE.

If using a extension board which do not have a μ C embedded, the Performance Analyzer FW has to be programmed on the Xplained Pro board using the EBDG from Atmel Studio.

2.3 Program Use

How to get started.

- 1. Connect the Wireless board assembly, with the Performance Analyzer FW programmed, to the PC USB connector and power on, a COM port should now be available for the kit.
- 2. Power on any other wireless node assemblies of similar frequency, running the Performance Analyzer FW, and use it as a reference.
- 3. Start Performance Analyzer GUI, connect to the kit via the COM port and follow the quick start guide.

2.4 Typical Wireless Nodes

Typical board assembly.

3. WireShark

3.1 Introduction

Wireshark is a free and open-source packet analyzer. It is used for network troubleshooting, analysis, software and communications protocol development.

Atmel provides an interface enabling use of WireShark GUI to monitor wireless communication using Atmel RF USB sticks.

Go to the WireShark home page¹ to learn the detail on how to use WireShark.

3.2 Program Installation

How to install necessary SW and FW.

3.2.1 WireShark Installation

How to install the WireShark analyzer.

1. Go to the WireShark home page² and download the WireShark installer.

2. Locate the downloaded installer and install WireShark.

¹ http://www.wireshark.org

² http://www.wireshark.org

3.2.2 Sniffer Interface Installation

How to install the WireShark sniffer interface, connecting the WireShark GUI and the sniffer FW running on the USB stick.

The sniffer interface program can be downloaded from Atmel Gallery.

- 1. Install Atmel Studio³.
- 2. Once Studio is installed and started use the Extension Manager to download the Atmel WireShark Interface installer.

3. Select Wireless and Atmel WireShark Interface.

³ http://www.wireshark.orghttp//www.atmel.com/tools/atmelstudio.aspx

- 4. Log in to Atmel Gallery if not already logged in.
- 5. Click download again and download starts.
- 6. You have now downloaded the Atmel WireShark installer, AtmelWiresharkFirmwareSetup.msi, run the installer.
- 7. You now have the "Wireshark Sniffer" user interface in the Start Menu All Programs Atmel folder and

the sniffer firmware files located in C:/Program Files (x86)/Atmel/AtmelWiresharkFirmware/

3.2.3 Sniffer FW Installation

How to install the WireShark sniffer FW.

- 1. Download the Atmel WireShark Interface installer as described in "Sniffer Interface Installation" on page 16.
- 2. Program the USB stick using the bootloader or the JTAGICE as described in "Programming" on page 3. The firmware files is located in C:/Program Files (x86)/Atmel/Atmel/WiresharkFirmware/

3.3 Program Use

How to get started ..

- 1. Insert the USB stick in the computer.
- 2. Start the Wireshark Interface program from the Atmel program folder
- 3. Select the COM port allocated to the USBstick with the sniffer FW and click Open.

4.2.1 JTAG (J2)

J2 is the JTAG programming header typically used by the JTAGICE.

4.2.2 Boot Select (J3)

J3 enables the Bootloader when J3.1 connected to GND during RESET. Insert jumper on J3 to connect J3.1 to J3.2.

4.4 Factory Programmed Data

The ZigBit® has a preprogrammed unique MAC address - details available in the ZigBit data sheet and in "Persistence Memory" on page 24.

The USB stick comes with a Bootloader and the Performance Analyzer preprogrammed.

5. Persistence Memory

A dedicated memory space is allocated to store product specific information and called the Persistence Memory. The organization of the persistence memory is as follows:

Table 5-1. Persistence Memory

Data	Size
Structure Revision	2 bytes
MAC address	8 bytes
Board information – PCBA Name	30 bytes
Board information – PCBA Serial number	10 bytes
Board information – PCBA Atmel Part Number	8 bytes
Board information – PCBA Revision	1 byte
XTAL Calibration Value	1 byte
Reserved	7 bytes
Reserved	4 bytes
CRC	1 bytes

The MAC address stored inside the MCU is a uniquely assigned ID for each ZigBit® and owned by Atmel. User of the ZigBit application can use this unique MAC ID to address the ZigBit in end-applications. The MAC ID can be read from the ZigBit using the Performance Analyzer Application that is supplied through Atmel Studio Gallery Extension.
